The Best There Is

© Robert Giede

Browning: the most sensitive of passions

Since 1897, the date of birth of the first Browning gun, millions, even tens of millions, of shotguns and rifles for hunting or target-shooting have created and signed by Browning. The inventor of the semi-automatic shotgun, the semi-automatic rifle and, the most recent innovation, an over-and-under gun with the lowest action frame and fastest firing system on the market has left its mark on the history of gun-making with a profusion of models, all different, but with one thing in common – their reliability and their unequalled levels of performance.

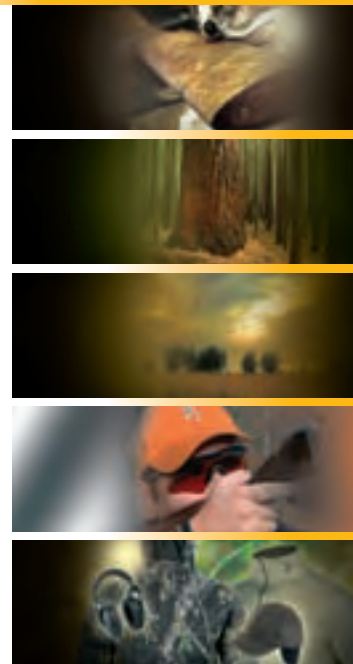

Every day throughout the world, Browning guns, old and new, continue to give their owners great pleasure. Browning guns have a much deserved reputation for quality and reliability which gives their owners complete confidence in our products. John Moses Browning was dedicated to excellence, quality and reliability and this philosophy continues throughout Browning today and going forward into the future.

Browning guns have an unrivalled reputation for quality and reliability, a tradition which Browning continues to build on. We are mightily proud of our history and work hard to ensure that those who choose Browning benefit from our years of experience, skill and dedication to quality. Browning, Simply - The Best there is.

Timeline | John Moses Browning

John Moses Browning: a life of invention

John M. Browning

John Moses Browning was born on 23 January 1855 in Ogden, Utah. He was one of the 22 children of Jonathan Browning, who, being a good Mormon, had three wives.

Gun making ran in the family of the young John Moses, as his father was a gunsmith who had already been responsible for a number of innovations in the field.

As a young boy, he spent his time in his father's workshop, and knew the name of every part of a gun before he could read. From the age of 6, he made fishing accessories from scraps of metal which he hammered into shape on an improvised, child-sized work bench made from a wooden crate. Even his father, a man well known for his patience, found it difficult to conceal his impatience at the incessant stream of questions from the young John Moses which disturbed him in his work...

The 19th Century American boyhood of John Moses Browning abounds with anecdotes, all of which share a point in common : they all point, towards him becoming an internationally renowned inventor of genius. Numerous authors compare Browning with Thomas Edison, another self-taught genius of that time.

At the age of 23, John Moses lodged his first patent, for the "J.M. Browning Single Shot Rifle". The drafting of the text of the patent in the required form caused him more difficulty than the invention itself. This invention consisted of a simplification of the percussion mechanism, making it more durable and reliable.

It was at about this time that Browning married Rachel Teresa Child, who would remain his life-long companion.

Shortly before his death, his father handed over his business to the young Browning who, in association with his brother Matt, despite having less than one thousand dollars in the bank and no experience of machine-tool operation, transformed the humble store into a small gun making workshop employing seven people. But from the start, the remoteness of their location. A lack of a ready supply of customers, and the lack of capital meant that the business struggled to survive until, that is, luck intervened to make the inventor known. A representative of the Winchester company having chanced upon a gun made by the Browning brothers in another state and, considering its design to be of interest, bought it from its owner and sent it to his superiors in the company's head office. So impressed were they that the managing director of Winchester himself set out straight away on a six day journey to what, at that time, was still the wild West, to meet the Browning brothers. Despite his astonishment at finding two young men in their twenties in a rustic workshop, he was perceptive enough to not be fooled by appearances and conclude commercial deals with them which would last for several decades.

Over the years, Browning granted licenses to several manufacturers for dozens of inventions and firearms developed by him. It is no exaggeration to say that he invented almost everything in the field of firearms. What is more, it should be noted that the vast majority of his technological innovations have not been able to be bettered or replaced since the beginning of this century, a clear demonstration of the level of perfection achieved.

In 1897, it was another manager with flair, this time from the Fabrique Nationale (National Weapons Factory) at Herstal in Belgium, who noticed a 7.65 Browning pistol incorporating a novel locking mechanism. The FN obtained the manufacturing licence, and thus began an uninterrupted period of collaboration between the inventor from the Great Salt Lake and the factory on the banks of the river Meuse.

Browning reached the peak of his art with the Auto-5 semi-automatic shotgun, which was a considerable commercial success and prompted his first visit to the Herstal works. But his world-wide acclaim is without doubt due to the 9 mm Hi-Power semi-automatic pistol, of which over 10 million have been made and which, since 1907, has been adopted by the majority of the world's police forces and armies. Browning has indeed become the generic name for this type of gun.

None of Browning's success is due to chance : like all of the American pioneers he turned luck to his advantage only through an enormous amount of hard work. His strength of character and the steadfastness of his principles were out of the ordinary. Thus it was that, towards the end of his life, when offered an honorary title by a university, he refused it for the simple reason that "he had made it a rule never to accept anything that he had not gained as a result of his own work".

He died of a heart attack as he worked in his office at Herstal, during the course of his 61st visit to Belgium in 1926. His final words, as he lay dying in the arms of his son, Val, were : "Son, I wouldn't be surprised if I were dying..." Work stopped and the workers paid homage to the man who had entrusted their company with the task of turning so many of his inventions into reality. His body was repatriated to the United States, where he was buried with full military honours. His son Val continued his collaboration with the Belgian factory without interruption. A collaboration that continues to this very day.

Timeline | B525

The worthy heir to B25

B5·25

In 1925, John Moses Browning put the finishing touches to an over-and-under shotgun that was to change the history of hunting shotguns. Once his prototype was finished, our man purely and simply called it the B 25 for Browning 1925.

83 years later, the B 525 is the latest evolution, the ultimate development to this legendary gun. It is, at the same time, the heir to the original model and its most modern, most highly perfected version, which has benefited from all the technological progress made on Browning hunting and target-shooting arms throughout the 20th century and since the beginning of the 21st century.

The B 525 was created in 2003 and it is the fifth generation of Browning over-and-under guns. The previous models, which have all made their contribution to its creation, are the B 125, which appeared in 1985, the B 325 born in 1991, and the B 425 unveiled in 1995. In one way or another, all these different versions, all these evolutions, have given birth to the B 525 and enabled it to become one of the most valued and most popular steel action frame fitted over-and-under hunting guns in the world.

History

Numerous improvements, Invector chokes, a massive single-piece binder, a single selective trigger, adjustable to three positions on certain models, etc., the B 525 has remained faithful to the model and the principles created by John Moses Browning, which are just as many guarantees of solidity, reliability and better performance. To the point where the robust forged steel action frame is guaranteed for 10 years, the proof of the confidence we have in this shotgun.

The B 525 now forms two families one for target-shooting the other for hunting, 21 models in all, three calibres, four barrel lengths, two types of action frame, steel or alloy and finally dozens of possible combinations to be sure of finding the right gun to accompany you for years and years of successful hunting.

The best there is

Browning has been developing hunting guns that are as hardwearing as they are elegant for over 125 years. Our great experience has allowed us to create a perfect union of traditional gunmaking skills and the latest technologies. Made by hunters for hunters, Browning guns are more than ever a guarantee of quality and reliability. Because we are willing to listen to your requirements, your desires and the evolution of hunting we draw on tradition to constantly create new products that are worthy of the brand's prestigious heritage.

1 | Quality / reliability

The legendary quality of Browning guns results from the care that is taken with every manufacturing stage for example:

- Today, a fleet of ultramodern, computer controlled machines assures the highest precision.

- A 3-dimensional reading machine guarantees infallible production checking and unrivalled respect for tolerances to provide increased manufacturing precision.

- Thanks to PVD technology, metal surfaces are given micro-coverings in a titanium nitrate, chrome nitrate or tungsten carbide air vacuum. The advantage of this technique is that it increases the hardness and long-life of the parts and their resistance to corrosion.

More modern materials, from the aeronautic and automobile industries state-of-the-art sectors, accompany noble, traditional materials. On our guns, walnut and steel are henceforth associated with aluminium, composite materials and carbon fibre for improved performance and reliability that are in keeping with the brand's outstanding reputation.

2 | Innovation / modernity

Because a gun should be both attractive and practical we turn to the most advanced creation techniques to constantly push back the frontiers of design but without forgetting that efficiency is most important in the field.

Some of the numerous recent inventions are shown below:

- The new compact magnum calibres (Winchester Short Magnum, Winchester Super Short Magnum), which are more powerful but generate less recoil than classic magnums, have been developed in association with Winchester, the other great Browning International group brand. The miniature magnums satisfy hunters who desire lighter, more manageable guns with magnum performance.

The success of this new ammunition has resulted in it being adopted by the entire armoured industry, which has adapted its guns to our cartridges. Browning has chosen to develop new exclusive, specific, patented gun systems to further satisfy these new calibres' specific requirements in order to optimise their performance with total operational safety.

The B.O.S.S. system | This device integrates a muzzle brake to reduce a rifle's recoil whilst improving its accuracy by harmonising the barrel's vibrations with specific ammunition. (p. 49).

BACK BORE technology | This exclusive back-boring process, which many have attempted to imitate, improves the smooth barrels' ballistic performance and reduces recoil. (p. 34).

CYNERGY | This stylish, competition gun has revolutionised the target-shooting world, it is the Formula 1 of shotguns. (p. 68).

BAR SHORT TRAC & LONG TRAC | The semi-automatic B.A.R. rifle, which celebrates 40 years of experience, has been joined by a completely new rifle, developed and designed specially for the new WSM (SHORT TRAC) calibres.

WSM (SHORT TRAC) | Fans of conventional calibres can use this new arrival with the SHORT TRAC model. (p.48).

FUSION EVOLVE | When you are the inventor of the semi-automatic rifle, you have a duty to employ state-of-the-art technology, the FUSION EVOLVE, with a gas-operated mechanism, is perfectly robust and reliable. It incorporates BACK BORE technology. (p. 36).

Browning | The best there is

Browning

3 | Performance / efficiency

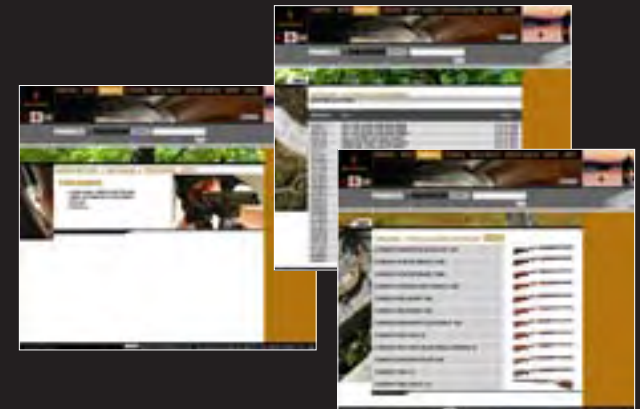

Since the beginning of the last century, the Browning brand has become legendary as the source of the greatest innovations in the firearm industry. These innovations saw the light of day thanks to research and development teams based in Europe and the United States (Browning and FN) and using the most modern technologies such as Computer Aided Design (C.A.D.), high frequency cameras at 25.000 images/second... ; all of this associated with a stringent final quality check which guarantees maximum reliability and performance. Furthermore each product development is the subject of a series of "studies per finished element" that aims to ensure that the gun has been correctly checked and meets our exacting standards.

(*) Average values

The Cynergy is:

- The lowest action frame on the market: 60 mm;
- A modern design;
- The fastest second barrel: 0,0019 s ;
- High-performance steel-shot tested Back-Bored Magnum barrels.

The low action frame with its integrated hinge gives this incomparable gun exceptional balance and incredible strength. Just to prove it, the Cynergy's action frame is guaranteed for ten years.

Shouldering the Cynergy is a perfect, fluid, rapid movement; comfort when firing is exceptional, you are in line with a weapon that has virtually no recoil, and the muzzle flip between two shots is so low that the second shot is even faster. The Cynergy is also a model of aesthetics, both modern and attractive, a novel design characterised by its smooth flowing lines, a slim silhouette.

The Cynergy's single trigger action will give a sensation that you have never experienced before; incredibly fast, crisp shooting, in fact the fastest in the world. Thanks to the special firing mechanism on this shotgun - in a class of its own - the time between first and second shots is only 0.0019 seconds, against 0.0031 for our leading competitors.

The Cynergy is now available as a hunting gun, in calibre 12 Magnum with a steel or light alloy action frame and in calibre 20 Magnum with a steel action frame. The Cynergy hunting gun's extremely elegant lines are set off by the quality of its grade 3, oil-finished wood, but also by the hunting scene engravings on its nickel-plated action frame. The Cynergy back-bored barrels also let you fire high-performance steel shot cartridges.

Browning recommends the use of ammunition
by Browning and Winchester

Cynergy Hunter Light Grade 4 12M

This stylish version of the Cynergy Hunter has been made in the famous Italian engraving workshop Giovanelli. Another feature of the gun is that its stock and forend are all made from a single block of Grade 5 American walnut.

Hunting

Cynergy Hunter Grade 3 12M

A stock in oil-rubbed grade-3 walnut, a steel action frame decorated with game scenes, two ducks taking flight on the right, two partridges on the left, together with a nickel-plated finish form the Cynergy Hunter's magnificent hunting finery. But the Cynergy's shape, design and performance are still the same. The Cynergy Hunter is the best of the latest generation of target shooting guns which are perfectly adapted for hunting.

Cynergy Hunter Grade 3 20M

For lovers of small calibres and guns with elegant lines, the Cynergy Hunter 20 with its steel action frame has been made just for you ! With its action frame height, its tulip fore-end and its classic stock, this shotgun is a real 20 magnum calibre in the body of a 28.

The B525 is above all a symbol of perfect mechanics that are impossible to fault. From the forged-steel action-frame to the wide flat bolt passing via the massive hinge pin or the barrels' chromed bores, everything on this gun is strong, incredibly reliable and made to give you the same excellent performance season after season. Semi-traditional manufacture of this gun explains this impeccable quality. The world of hand-made construction reigns over this shotgun, which is assembled a first time – in a dummy run – before being polished, engraved, hardened and then re-assembled. At every assembly operation, contact surfaces are checked using red ochre on both metal and the wood and then hand-filed for perfect fitting. It is this attention for detail, this quest for perfection and for honouring gunsmiths' traditions, that gives the B525 its well-justified reputation for long life. The B 525, the fifth generation of Browning's over-and-under hunting gun built on the basis of the famous B25, all of Browning's history and tradition combined together in a single shot-gun. Browning, The Best there is.

Heritage Hunter12M

Here is Browning's new top-range over-and-under hunting gun. The Heritage is the direct descendant of the side-plated B 25 and has inherited all its elegance. The engraving on its action-frame is a creation by Cesare Giovanelli, the Italian master who has trained most of the top engravers today. The stock is made from carefully oil-finished top-quality walnut. With its rounded half-pistol stock and its tulip fore-end, this shotgun pays real homage to the B25, of which it is a worthy cousin. The Browning Heritage is luxury and reliability available to all.

Hunting

B5·25

B525 | The best performing and most reliable range

B5·25

Setting the standard

When you buy a Browning B525 you are not only buying the heritage and experience of over 80 years of renowned excellence, you are also buying a shotgun that is the 5th generation of the legendary B25. The Browning B525 is a more than worthy descendant of this legendary shotgun and like the B25, the Browning B525 has set the standard since its inception in 2003.

The Browning B525 is the product of reference in the 'world of Over and Under shotguns' since then as:

- The best performing and most reliable shotgun in its price range
- Renowned for its exceptional manufacturing quality with each and every shotgun being hand crafted
- Offering a wide range of options to meet all shooters needs whether sporting or hunting

1 | The best performing and most reliable range

One of the many unique qualities you will find, like the B25, is that all Browning B525's are perfectly balanced allowing you to consistently perform well whether shooting clays or game. The balance of each gun is perfected by its hand crafted nature making each gun a true individual.

The B525 is so well balanced that when in your hands, you'll forget that you are holding a gun as it becomes an extension of 'you' enabling you to fully concentrate on your target whether game or clay.

Each and every B525 uses the patented action frame made from indestructible forged steel using Browning's unique wide diameter hinge pin that guarantees strength and resistance to wear. So sure of this system that Browning provides a 10 year warranty for the action frame of each and every gun. The B525 hinge pin provides an exceptionally smooth opening and closing motion - you can literally feel the gun close securely each and every time. All Browning barrels and chambers are made from Chromium Molybdenum steel which is highly resistant to corrosion, as long as they are maintained correctly and ensure easy maintenance after a day's shooting. High performance steel shot can be used in each and every B525 fitted with Invector chokes. The B525 is totally reliable using an impact hammer ejector system. The B525 is totally reliable and will never let you down especially if you are in the thick of the action.

2 | Hand crafted for guaranteed looks and performance

The Browning B525 is not industrially produced but instead each gun is made individually with its own set of unique components going from one gunsmith to the next as the gun is literally hand crafted using each gunsmith's years of knowledge and skill. It takes over 4 months to make a Browning B525 as there is so much individual attention paid to the build of each gun.

The Browning B525 is the only shotgun on the market in its price range that offers so many different options and is hand crafted to produce an individual shotgun of such exceptionally high quality that will precisely fit its owner and deliver Browning's renowned reliability and durability.

This time proven method of manufacturing is different to all others on the market as our highly skilled gunsmiths rely on their own expertise and craftsmanship to build your B525 resulting in a totally unique shotgun with no interchangeable parts with other B525's.

It is said that our gunsmiths give each B525 'a little bit of their life' making it an individual so that all the elements of the shotgun fit together tightly and securely so that each B525 performs as you would expect time after time.

During every stage of manufacture total care is taken to make a shotgun that sets the standard for all shotguns which includes finely adjusted trigger pull weight to meet our specified range for optimal performance.

3 | Hand fitted creating the best there is

Browning's gunsmiths take their time when making a B525. This is the only shotgun on the market at this price level that is hand fitted during production to such a high standard with this level of attention making each shotgun truly unique.

Traditional red ochre is used to check that the fit between the action and barrels is perfect. This method is the best traditional method to ensure an exact fit between all the wood parts and metal parts is achieved. It literally allows the gunsmith to see inside the gun. And where needed adjustments are made by hand one by one to ensure that the Browning B525 sets the standard for all other shotguns.

The attention to detail in the making and fitting together of each and every Browning B525 is unique just like the 'Browning feeling' as the locking pins meet when you close your gun. It makes such a reassuring perfect sound willing you to want to go and shoot.

Hunting

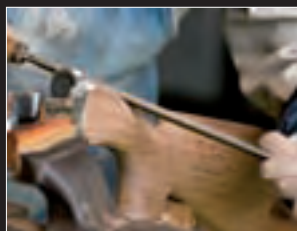

4 | A choice of wood grades and stock options

Each stock is made using specially selected walnut sourced from renewable forests in Europe and a choice of grades are available from grades 2, 2.5, 3, 4 and 5.

The grade of walnut used on your Browning B525 is dependent on the choice of gun that you decide to purchase.

A choice of different stock grips is also available from Pistol grip, Round Pistol grip and a Straight Stock grip. Each stock is traditionally checkered providing additional control whilst shooting. The time and care taken over the fitting of the stock to each B525 ensures that each and every gun is perfectly balanced.

Recognising that we are all different, Browning also produces the B525 that is suitable for left handed people and adjustable triggers with 3 different positions are provided on all Sporting models.

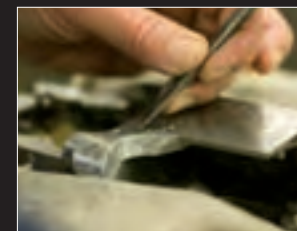

5 | Safety

Every single B525, like all Browning shotguns, undergoes extremely stringent quality checks which include manual inspections and measurements to actually firing each and every gun to check that the shot patterns meet our exacting standards. This is supported by using computerised analysis to guarantee operation and extreme reliability so when you are out in the field you can be assured that the gun you are using will not let you down.

6 | Engravings to suit your budget or requirements

Each B525 shotgun comes with a number of different choices in engravings to suit your budget and desires and is dependent on what grade of gun you decide to purchase. These engravings include traditional game scenes such as duck and pheasants in flight to the classical roll & scroll. The engravings become more ornate and elaborate as one progresses from the Classic to our new top of the range Heritage model.

To ensure that every detail on your B525 is completed to the finest quality many engravings are again hand finished.

B525 Classic 12 M, 20M & 28 | Over-and-under shotguns

B5.25

B 525 Million Limited Edition

A million B525s

One million ..., one million over-and-under guns! Some figures really do not need much comment at all.

Just a few weeks ago, Browning proudly celebrated the manufacture of its millionth over-and-under gun in the B 525 family. A more than eloquent figure that materialises the undeniable success of Browning's over-and-under guns and opens the way for the B 525 to enter the very tight circle of legendary guns.

The B 525 is the latest evolution of a legendary gun created by the innovative and genial mind of John Moses Browning in 1925: the B 25, the "last word" in over-end-under guns. It was on the basis of this gun that the B 325, the B 425 and, since 2003, the B525 were created and produced, three arms that have now been manufactured in a million copies, a real record. This figure attests not only to the success of the gun but, above all, to the confidence placed in Browning over-and-under guns – especially the B 525 – by hunters and sports-shooters throughout the whole world. In less than five years, the B525 has become an absolute reference, the perfect representative of Browning's quality, know-how and tradition. Its reliability, toughness and ease-of-use are legendary thanks to a faultless, much-envied quality of production. Each gun is built with unique care by qualified gunsmiths in our Japanese plant Miroku. Furthermore, for the past thirty years, Miroku has been considered one of the highest-performing production plants in the world. It is a place where care for detail and rigorous manufacturing processes are set up as rules, almost as a way of life. Every B 525 made is assembled in the traditional way using red ochre, the bearing surfaces of the bolt and action-frame are hand-filed and everything is checked and rechecked time and time again, so that neither time nor the thousands of cartridges to be fired will have the slightest effect on the gun.

It is at this price that we are able to guarantee Browning 525 action-frames for 10 years and that every gun is at the same time identical to the others, yet unique in itself.

To celebrate the millionth gun produced, Browning is proud to announce the creation in 2009 of a special, limited, numbered series. Only 250 guns will be made in the hunting version and 250 in the sports shooting version. These "One Million" B 525s with top-quality finish using the most carefully selected wood will also have an exclusive engraving, specially designed for the occasion.

B525 Hunter Prestige 12M

The charm of the prestige (Gr 5) is more discrete. The fit of the barrels, the hand finished engraving and the very attractive old silver Nitrate colour of its action frame make this an elegant gun in the best possible tradition. It comes in an Opaline case. This model has a stock with teardrops, and a multi-purpose 3" Magnum barrel like that of the Gr 1.

B525 Light | Over-and-under shotguns

B5.25

B525 Hunter Light Classic 12M

The gun of the 3rd millennium for the demanding hunter. All of the developments introduced with each new generation of Browning light models are incorporated in the B525 Light which constitutes the ultimate synthesis of efficiency, weight and good looks. An action frame made of a lightweight "Aircraft" grade alloy reinforced with high strength steel inserts, a suitably profiled barrel and a choice of wood and form result in a lightweight gun with perfect handling and balance. Unequalled elegance, further enhanced by brand new game scene engravings.

by Browning and Winchester

B525 Hunter Light Advance 12M

The B525 Light range is expanded with this Advance model that offers a more comprehensive and detailed engraving as well as grade 2,5 oil-finished walnut.

Hunting

B525 Hunter Light Classic 20M & 28

Only 2.7 kg! The B525 Classic Light calibre 20 or 28 is Browning's lightest over-and-under hunting gun. Use of a light-alloy action-frame with its steel toner insert and an expert choice in oil-finished wood are the secrets behind the gun's remarkably lightness. The B525 Classic Light calibre 20 or 28 has all the joys of small calibre shooting combined with lightweight handling.

B525 Hunter Light Classic 20M & 28

B425 Waterfowl | Over-and-under shotguns

B425 Waterfowl 12 Super Mag

Designed for intensive use in wet environments, the Waterfowl will follow you on your duck and goose hunting expeditions with less risk of damage. Its stock is protected with the new Dura-Touch. It is chambered for 31/2" cartridges, and its barrel can accept steel shot and high load cartridges without any problem. The 62 mm "Invector Plus" Chokes ensure the best patterns possible.

B425 Waterfowl Camo 12 Super Mag

Now chambered in 89 mm or 31/2", this version which is equipped with new Mossy Oak® Break up™ camouflage and Dura-touch coating, to give you unrivalled efficiency and comfortable use.

Back-Bored | Back-Bored Barrels

Browning reveals the professionals' secret: back-bored barrels.

First used in 1990, "BACK-BORED" is a technical breakthrough that has allowed our shooters to win numerous medals.

Better impact and higher velocities for improved shooting accuracy. A "back-bored" barrel is one whose internal diameter (the bore diameter) has been increased beyond traditional specifications.

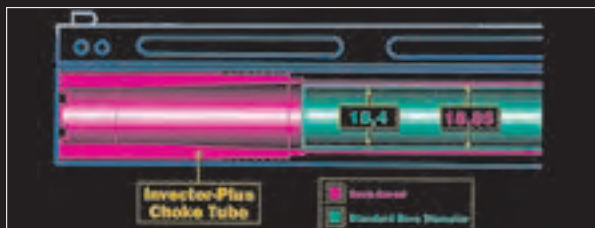

Hunting

1 | Increased penetration velocity

"Back-bored" ensures that there is less friction between the shot and the wall of the barrel. Instead of having to overcome friction, more of the energy generated by the gun-powder gases serves to propel the cartridge, thus increasing the velocity of the load.

The shot retains its ballistic quality.

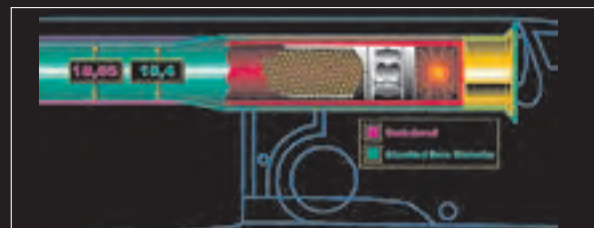

The force of the pressure exerted by the barrel wall on the load is reduced, thus reducing the number of deformed pellets fired and increasing velocity.

2 | A 6% reduction in recoil

A reduction in recoil means improved shooting comfort.

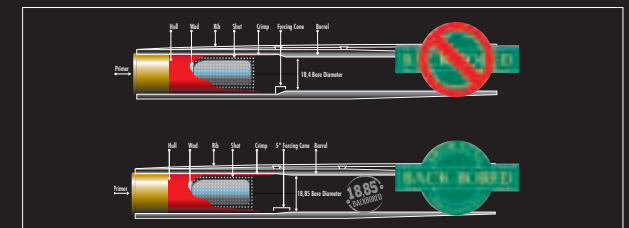

In a back-bored barrel, the load passes more easily reducing the amount of recoil felt by the shooter, thus improving his shooting comfort.

3 | Improved shot pattern

The ballistic characteristics are improved and you achieve exceptionally uniform shot patterns with many more effective pellets hitting the target.

- Tested and approved by the Browning Research & Development department.
- "Back-Bored Technology" barrels allow you to get the very best performance out of the cartridge.

Fusion Evolve | Semi-automatic Shotguns

fusion evolve
browning makes all the difference

1 | Reliability & Versatility

The Fusion's piston has an "Active Valve system" regulating valve inside it. This regulating valve works independently of the piston, which make it more efficient than other gas operated systems and means that it lasts longer.

- With light loads, the piston uses most of the energy generated by the gases for perfect operation.
- With heavy loads, the excess gas is rejected through the piston's side ventilation holes.
- Operates perfectly with all cartridges from 28 g to 56g.
- The regulating valve has 3 segments which ensure that it is perfectly tight and that the magazine tube is clean for excellent operation.
- The piston's extremely short stroke limits the quantity of gas given off.

2 | Exceptional barrel

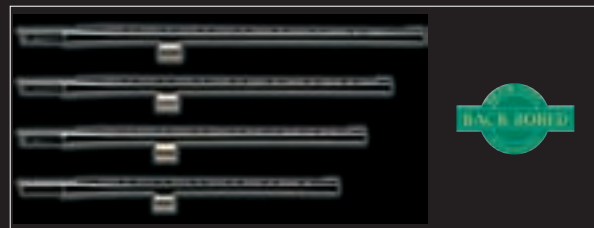

- The Fusion Evolve's Back-Bored barrel and its ventilated rib which is silver-welded are synonymous with great rigidity. The advantage of this strength when firing is that the points of impact are perfectly consistent and regular. Your shot pattern isn't scattered.
- The Fusion Evolve semi-automatic shotguns' barrels are completely interchangeable, so you can change them easily. Depending on your type of hunting, you could use a 61cm, 66cm, 71 cm or 76cm barrel on the same gun.

3 | Speed Loading™

Express loading system

The exclusive Speed Loading (*) and Cut Off combination gives Browning semi-automatic shotguns the following advantages:

- Express loading
- Instantaneous cartridge loading in the chamber • Complete safety with the breech open
- Immediate reloading by disabling the Cut Off
- Ultra fast
- Extremely simple to load
- Just one action is required to load your gun: with the breech open, simply insert a cartridge into the magazine tube and it will be chambered automatically.

Hunting

4 | Cut Off Magazine

It is the Speed Loading-Cut Off association that makes Browning semi-automatics, the fastest, easiest to use and safest shotguns.

Cut Off engaged. The cartridges are blocked in the magazine tube.

CUT OFF released

A) Allows you to change the chambered cartridge quickly..

B) Gives great handling safety in the breech open position.

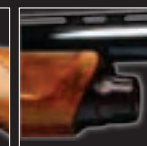

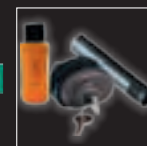

C) If you subsequently release the Cut Off, the first cartridge held in the magazine tube will be chambered automatically thanks to the Speed Loading.

5 | Essential features

- Barrel and frame manufactured by the Fabrique Nationale (National Factory) in Herstal.

- Excellent balance and ergonomoy.
- Ambidextrous safety devices, quick, easy adaptation.
- Hammer safety device exclusive to Browning, safer than simply a trigger safety device.
- All hunting or sport shotguns (over-and-under or semi-auto guns) by Browning, Winchester and Miroku fitted with original chokes (Invector, Steel Invector Plus, Stainless steel Invector Plus, Teague, Briley, Midas, Diamond, Signature chokes) can fire "high performance" steel shot cartridges.
- Very high quality assembly and finish.
- In removable version total capacity of 5 cartridges.
- Hi-Viz foresight with a set of 7 additional foresights
- Adjustable stock because of 6 inserts which allow it to be adjusted depending on your requirements

- Back Bore Technology barrels allow you to get the very best performance out of the cartridge:
 - An increase in velocity and penetration
 - Improved shot patterns
 - A 6% reduction in recoil (see page 34)
- An extra flat carry case allows you to easily carry all the accessories you need with you.

Four years have past since the Phoenix joined Browning's range of semi-automatic shot-guns. The Phoenix family has grown every year and now includes five different models. The idea behind this gun is to offer Browning quality at an economical price. This "shooting machine" is at ease on all terrains under all sorts of weather conditions, because of the special treatment given to its receiver or its wooden elements and because you have the option of a composite stock. It includes the Active Valve system and Back-Bored barrels, without forgetting the Invector plus chokes that have made Browning semi-automatics so successful. Phoenix, an unbeatable quality-to-price gun which maintains our reputation for quality and reliability.

Phoenix | Semi-automatic Shotguns

Phoenix Topcote 12M

The Phoenix Top Cote is an improved version of the Phoenix with a special wood-coating treatment that improves the look and also gives improved resistance to moisture. As for the receiver, it has a special black coating.

Phoenix 12M

The Phoenix gives you access to Browning quality at the best price. 3" Back-Bore barrels fitted with removable Invector + chokes, high performance steel shot and the exclusive gas operated system "Active Valve System" make this gun a machine which can be fired in any conditions. Furthermore, its receiver decorated with a magnificent Phoenix is fitted with a special coating that gives superior resistance in saline conditions. Tests in saline mist, which are extremely demanding, have shown that the finish resists corrosion for a considerably larger period than a similar gun with a classic finish.

Phoenix 12M

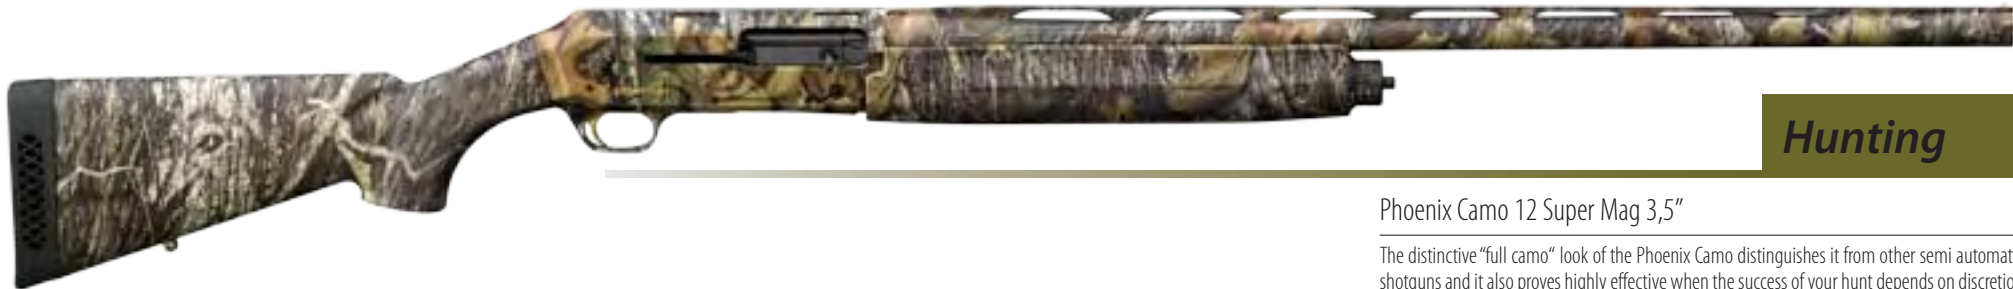

Phoenix Camo 12 Super Mag 3,5"

All Phoenix have a dovetail receiver to facilitate scope mounting.

Phoenix Composite 12 Super Mag 3.5"

This model's composite stock make it an extremely robust, all-purpose gun. With its Back Bore barrel chambered in 89 mm (3.5"), you can fire any type of cartridge from light 32g loads to 63g heavy loads wich is particular useful for Goose shooting.

Hunting

Phoenix Camo 12 Super Mag 3,5"

The distinctive "full camo" look of the Phoenix Camo distinguishes it from other semi automatic shotguns and it also proves highly effective when the success of your hunt depends on discretion and the ability to blend into the background. Ideal for hunting waterfowl and pigeons.

Phoenix Special Duck 12 Super Mag 3.5"

The Phoenix Special Duck is the waterfowl specialists' semi-automatic shotgun at a price accessible to all. It has all the technical characteristics of the Phoenix, but with its 3 1/2" chamber it can fire 89 mm super magnum cartridges. The receiver on this special model is black and decorated with a silver duck.

Browning | Browning Arms Company Quality Demands – B.A.C.O.

The qualification of new products

Before they are launched onto the market, Browning guns undergo numerous, very strict Browning internal tests.

No product will be validated if it fails to completely fulfil the following requirements.

100% systematic inspection of mass produced guns

Browning's extremely stringent quality checks impose a systematic inspection of each serial gun which is screened during numerous checks and tests.

1 | Operation and endurance tests

- Minimum of 2 000 shots for rifles
- Minimum of 5 000 shots for hunting shotguns
- Minimum of 10 000 shots for sports shotguns
- Test conditions: the gun is cooled down every 50 shots and cleaned every 500 shots
- The full range of cartridges of different makes is used.
- No part breakage is tolerated.
- Once the test has been completed, none of the parts should be excessively worn.

2 | Tests in adverse conditions

- The gun should operate at extreme temperatures : from -30°C to +50°C

3 | "Torture tests"

All of these torture tests are carried out in extreme conditions that greatly exceed those of the conventional C.I.P. standards. Browning guns' legendary solidity and reliability are largely due to them passing all of these tests.

- Overload tests for all guns
- Obstruction tests for rifles
- Safety tests : drop tests for all guns

BACO

4 | Gun checks

- Visual inspection of each product : gun + packaging
- Systematic measuring of certain points : headspace, chamber dimensions, weight, specific dimensions...

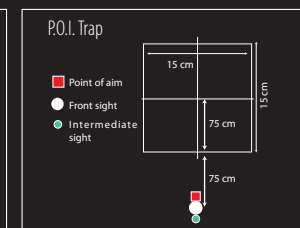

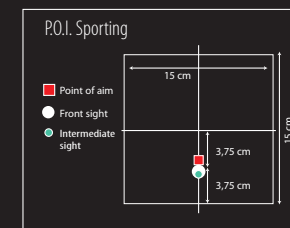

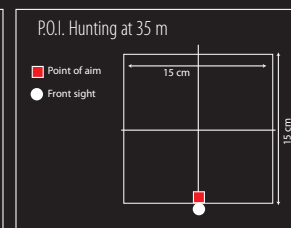

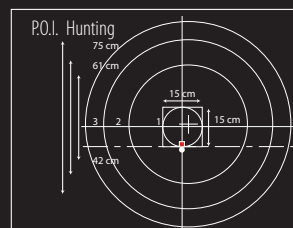

5 | Gun tests

- Manual operation tests.
- Shooting tests : operation and accuracy.

6 | Accuracy Tests

- For rifles: very precise check on bullet grouping.
- For shotguns:
 - P.O.I. (Point Of Impact) test which is the shot pattern's average point or centre of aim.
 - This test is carried out at 35 m with different points of aim depending on the product and therefore its use:
- For under-and-over shotguns, the maximum difference between 2 shot patterns' centres should not exceed 10 cm with a convergence set at 35m.
- Systematic check on the quality of the lead shot patterns using computerised analysis to guarantee operation and extreme reliability.

CCS 525

CCS 525 Elite

Browning recommends the use of ammunition
by Browning and Winchester

CCS 525

With the introduction of the CCS 525 in the 525 range, Browning wanted to provide the demanding hunter with a gun that is attractive, while at the same time guaranteeing flawless operation and unequalled accuracy, and that can be easily adjusted to accept the different types of cartridge available on the market.

Hunting

Browning has reinvented the Express Rifle

The barrels, the essential part of this gun, are both traditional and original. A spacer on the upper barrel ensures the accuracy of the vertical convergence of the barrels, while lateral convergence is ensured by the design of the barrel itself, which incorporates a unique "Cradle" strip. Once the ammunition has been chosen, a spacer ring is recommended and inserted securely under the foresight on the upper barrel, guaranteeing unequalled accuracy. (*).

The weight and balance are perfect for current hunting conditions.

The action frame has been strengthened by means of high strength stainless steel inserts.

Very special attention has been paid to every detail of this gun: a "hog's back" stock with a Bavarian cheek piece, an accentuated tulip-shaped forearm for greater elegance, a fluorescent optical fibre foresight and a traditional battue rib allowing a scope to be mounted by a gunsmith in minimum time. The animal engravings with which it is decorated make this a very attractive and unique rifle.

(*) It is essential that this operation is carried out by your gunsmith.

CCS 525 adjustment wedge system

Exclusive barrel convergence adjustment system: Cannot be unset and can be adapted to different types of ammunition.

Thanks to this system, the double Express CCS525 rifles are originally set to 60m by the Liège Test Bench and the 2 impacts should be within a 5 cm square. The ammunition used is Winchester Partition 12.96 g and 18.53 g for 8x57JRS and 9.3x74R calibres, for the 30R Blaser, it is Blaser CDP 10.7 g ammunition. If you would like to use different ammunition you should adapt your gun using one of the 7 adjusting rings that are supplied with the gun.

System operation:

Whatever the diameter of the adjusting ring mounted at the gun's muzzle, the barrel convergence angle maintains a natural pressure and therefore a permanent contact between the muzzle of the upper barrel and the barrel spacer wedge.

As this wedge is itself silver-brazed on the lower barrel, this ensures during firing that the position of the upper barrel's muzzle in relation to the lower barrel is constantly maintained.

BAR Zenith

The best selling semi-automatic rifle in the world.

New

Does the BAR, even with its real name, the Browning Automatic Rifle, still need to be presented? With the BAR a new generation of firearms was born, semi-automatic rifles for big-game hunting. Since it was created in 1966, by a certain Bruce Browning, John Moses Browning's grandson, which is real proof that it runs in the family, the Bar's success has been unflinching. With over a million rifles sold in 42 years, the Bar is the unchallenged leader, the reference in semi-automatic rifles. It owes this title to the quality of its mechanism, to the smoothness of its gas-operated system, which reduces felt recoil to a minimum, to its reliability, but also to the fact that it has been continuously improved to offer you better and better performance.

As the seasons go by, the BAR has been regularly improved and benefited from mechanical or aesthetic modifications to remain the best rifle in its category. Today, twelve different versions exist, offered in twelve different calibres. Whether you opt for a ShortTrack, a LongTrack or a traditional BAR with a steel or light alloy receiver, you will surely profit from over forty year's know-how, shooting and excellence.

Bar Zenith Prestige Wood

The Prestige version of the Bar Zenith is made up of two models, the Wood and the Big Game, both fitted with a Bavarian stock and a tulip fore-end made from grade 3 walnut. The Bar Zenith Wood is characterised by its wooden grips integrated into both sides of the receiver whereas the Bar Zenith Big Game is fitted with engraved grips. Every Bar Zenith can also be customised to suit your preferences thanks to the wide range of options.

Bar Zenith Prestige Big Game

New

ShortTrac LongTrac

BAR ShortTrac - LongTrac | The range

The widest, most comprehensive range : 13 models, 10 calibres

The undisputed leader, Browning is the semi-automatic rifle specialist. 42 years' experience, the first BAR was launched in 1966. Over 1.000.000 BARs sold in the world

In 1966, Browning launched the BAR (Browning Automatic Rifle) that was to quickly become THE market reference. In spite of severe but often ineffective, competition, the BAR became the leading semi-automatic rifle in Europe.

In 2002, in close collaboration with Winchester, Browning developed the WSM (Winchester Short Magnum) calibres, combining the power and the accuracy of classic "magnum" calibres with a smaller cartridge.

In 2003, Browning launched the ShortTrac, the first semi-automatic rifle on the market to be developed specially for WSM calibres. The smaller dimensions of the WSM cartridges have made it possible to create a lightweight, compact gun that guarantees "Magnum" performance. The ShortTrac incorporates all the experience of the BAR gained by our Research and Development departments over a period of almost 40 years for your maximum satisfaction.

1 | The most reliable rifle on the market 42 years' experience

- Chromed chamber and gas cylinder, do not rust and make ammunition extraction easier.
- The Browning gas-operated system is adjustable; it therefore enables you to adapt the gun to the type of ammunition used. This operation must be carried out by your Browning gunsmith.
- Welded gas cylinder, perfectly watertight.
- Breech damping system, reduces mechanical parts' wear and stress.
- The regulating system's floating mass ensures regular supply and more reliability.

2 | Great accuracy

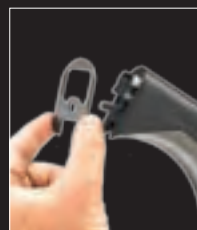

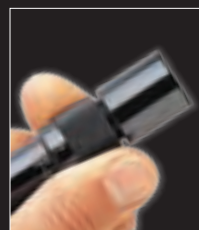

- Locking occurs in the barrel by means of 7 lugs which engage in an extremely rigid way. This gives excellent shooting accuracy and the possibility of firing magnum cartridges.
- Hammered barrel manufactured by the Fabrique Nationale (National Factory) in Herstal, a guarantee of quality.
- The barrel is breeched in the frame which gives great rigidity.

Hunting

3 | Essential features

- Very high quality finish and assembly.
- Exclusive Browning B.O.S.S (Ballistic Optimizing Shooting System) system: Improved accuracy
The BOSSTM system allows the rifle to be quickly adjusted to the desired load. Each barrel equipped with the BOSSTM is marked with 10 incremental markings, and a table of average settings is supplied for each calibre.
Reduced recoil
The BOSSTM system allows the bullet to leave the barrel at the ideal moment, i.e. in the "peak" or the "valley" of the vibration wave when the muzzle is virtually motionless.
- Reversible safety device for left-handed users.
- Height- and side-adjustable stock on Short & LongTrac using 5 inserts.

- An ergonomic magazine catch allowing easy access to the hinged magazine holder and easier loading.
- For countries where the legislation allows it, a removable drop-down magazine with a 6 shot capacity is available as an accessory.

BAR ShortTrac - LongTrac | Semi-automatic Rifles

ShortTrac LongTrac

Bar ShortTrac - LongTrac Luxe

The ultimate in refinement, the Bar Luxe plays a real trump-card in elegance with its new ultra-realistic animal engraving finished off by our best engravers. On this top-range model, the very best walnut has been chosen for the magnificent stock with its slight hog's back, Bavarian cheek-piece and tulip fore-end. The Bar Luxe is delivered in its own specially designed Opaline case.

Bar ShortTrac – LongTrac Eclipse Gold

Continuing the Eclipse model's features, the Eclipse Gold version is characterised by golden subjects, wild boar and deer, on each side of the receiver. Furthermore, it has a beautifully piped barrel, which facilitates the barrel's cooling.

Hunting

Bar ShortTrac – LongTrac Elite Topcote

Numerous aesthetic innovations make this Elite a complete success. Firstly, regarding its receiver endowed with brand new grey anthracite nickel-plating that is far more resistant, which bears a modern engraving with a gold inlay (by Ch. Perrin). Another essential point, the wood benefits from an all-new glossing treatment "Top Cote", which also gives greater resistance to moisture.

TOPCOTE™

Bar ShortTrac – LongTrac Plus

With its tone-on-tone Browning stamp on the receiver, oil-rubbed walnut finish, the Plus model is a refined version of the standard model. The Bar ShortTrac and LongTrac Plus is available in the most popular gauges and comes with an ABS carry case.

BAR ShortTrac - LongTrac | Semi-automatic Rifles

ShortTrac LongTrac

Bar ShortTrac - LongTrac Composite

The stock and pistol grip made of composite materials make this gun extremely robust in any conditions. Also, the rubber over-moulding affixed to some essential parts give superior and very comfortable handling and grip.

Stock adaptability

Different types of freely interchangeable stocks and fore-ends are available as spare parts for fitting to your ShortTrac/LongTrac rifle.

Bar ShortTrac – LongTrac Camo

This ShortTrac/LongTrac camo version has an all-over Mossy Oak® Break Up™ pattern to blend in perfectly with the undergrowth, and is best used in conjunction with camouflage clothing. Highly effective for big-game hunting.

Hunting

Bar ShortTrac – LongTrac Eclipse Gold Left Hand

Bar ShortTrac – LongTrac Elite Left Hand

Browning is the world's first gun manufacturer to bring you a "left-hand only" semi-automatic rifle with left-side ejection system. The large number of left-handed hunters condemned to using unsuitable rifles finally have the answer they have long been waiting for, and spent shells ejecting close to their eyes or burning their arms are now a thing of the past. Comes in two versions: New Elite and Eclipse Gold.

BAR Steel | Semi-automatic Rifles

BAR

Bar Steel Affût BOSS™

The addition of the BOSS™ system produces two particularly interesting effects : reduced recoil (in the region of 30 to 50 %) and improved accuracy.
The performance of the BAR is thus improved when using a scope or firing long range shots.

The best selling semi-automatic rifle
in the world.

Hunting

Bar Steel Affût

This version is fitted with a vertically and horizontally adjustable rear sight. The fine metal foresight ensures a perfect accuracy of aim.

X-BOLT

The new benchmark in bolt-action rifle design.

The bolt-action rifle market is changed forever with the introduction of the all-new Browning X-Bolt. The X-Bolt builds on the proven success of past Browning rifles, and adds numerous improvements that are certain to place the X-Bolt at the top of the pack. The most remarkable new feature is the adjustable three-lever Feather Trigger™ system that offers the best feel on any Browning rifle ever. A new bolt unlock button offers enhanced safety while unloading. Its new design features more compact dimensions and improved balance, making the X-Bolt a highly functional rifle. Finally, to ensure optics stability, scope bases are now attached to the receiver using four screws per base. Innovation is a Browning tradition and the X-Bolt is one of the finest examples.

1 | Feather Trigger™ system

For precise shooting in the field or off the bench, there's absolutely no substitute for a good, predictable trigger. The X-Bolt's new three-lever Feather Trigger™ provides a clean, crisp pull with no take-up or creep and minimal overtravel. The trigger is screw adjustable from 3 to 5 lb and factory preset at approximately 3½ lb. An alloy trigger housing contains the hard-chromed steel components that are highly polished on all critical contact surfaces. Precise engagement angles give the X-Bolt Feather Trigger™ a lighter trigger pull feel that stays that way throughout its life.

2 | An precision barrel

A free-floating barrel is essential for utmost accuracy. The X-Bolt is free-floated by bedding the front and rear of the action for stability and to help maintain barrel-to-stock spacing. Another important point, the perfectly designed muzzle crown is slightly recessed to help protect the rifling from damage. Barrels are triple checked for interior finish, straightness and air-gauged for uniformity. All of these points make the X-Bolt an extremely accurate rifle.

3 | Bolt action

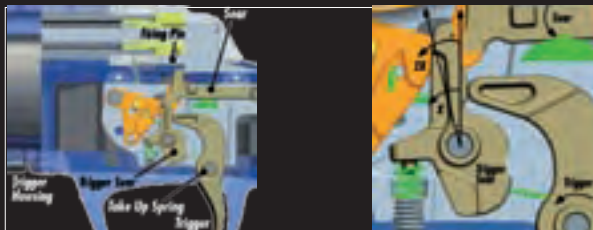

• Bolt unlocking in the safety position

The bolt unlock button works in conjunction with the top-tang safety to provide an added measure of safety. Conveniently located on top of the bolt lever, the bolt unlock button allows the bolt to be unlocked and opened with the safety in the on position. You can therefore safely check and unload your X-Bolt chamber. Finally, the safety blocks the trigger sear and features a firing pin block for added safety.

• 60° bolt lift

The short 60° bolt lift is fast cycling and allows you to work the bolt more quickly without the scope getting in the way. The all-new bolt is machined from a block of solid steel bar stock for strength and custom rifle precision. Three locking lugs provide exceptional reliability.

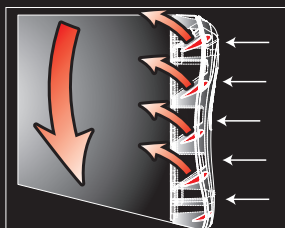

X-Bolt | Repeating rifles

Hunting

4 | Inflex Technology Recoil Pad

An all new Inflex Technology recoil pad is standard on every X-Bolt rifle. This ultra-soft pad offers the best recoil absorption available on any rifle. The revolutionary construction and material promote a directional deflection of recoil forces, pulling the stock comb away from your face to reduce felt recoil and muzzle flip.

5 | Exclusive magazine

An all-new detachable rotary magazine is perfectly integrated into the X-Bolt design. Constructed from a durable lightweight polymer, the magazine is designed to feed cartridges directly in-line with the bolt for a straight feed into the chamber. The cartridges are therefore chambered faster and easier without damaging the tip as in the case of traditional leaf-spring magazines. An ergonomic magazine-mounted release lets the magazine rotate directly downward and into your hand. This magazine can therefore be easily detached with just one hand, even when wearing gloves in cold weather.

Another important feature, the magazine has shoulders so that ammunition is held perfectly in position when fired to avoid any damage to bullet tips.

6 | X-Lock™ scope mounting system

Securely mounted optics are essential to the accuracy and precision of any rifle. To ensure the new X-Bolt has the most stable mount possible, it features an all new HYPERLINK X-Lock scope mounting system that uses four screws per base, replacing the traditional two-screw system. The benefits are obvious, with the scope bases being secured at all four corners rather than only held at the centre of the base, allowing for more secure fitting on the receiver.

X-Bolt Hunter with sighting system

Besides all the exceptional characteristics that have already been presented in the past, this version of the Hunter is characterised by the battue rib type sighting system and optic fibre foresight for rapid firing at short distances without a scope. It is ideal for battues and very polyvalent in use. Furthermore, a “hide” type rear-sight is also delivered with your arm. The X-Bolt’s very modern designed forestock is made from walnut.

New

X-Bolt Stainless Stalker

A highly resistant firearm, ideal for use in all weather conditions, the X-Bolt Stainless Stalker has a mat grey stainless steel finish together with a composite stock with a Dura-Touch® coating. This gun is a choice partner for hunting under extreme conditions. Available with rifled barrel.

A-Bolt - Eurobolt | Repeating rifles

A-BOLT

A-Bolt Composite Stalker

Sharing the same characteristics as the rest of the A-Bolt range, this Stalker version, with its composite stock, will withstand the most severe conditions. It will also meet every expectation of both hunters and target shooters.

A-Bolt Titanium

Ideal for target shooting, vermin or game, the stainless stalker seduces as much by the intrinsic qualities of its materials as by its looks. Its composite fibreglass/graphite stock, together with its stainless steel barrel and action make it a gun that is perfectly suited to all kinds of weather.

A-Bolt Hunter Field

A very European look for this A-Bolt Hunter Field whose essential element is a Monte Carlo stock which gives greater comfort when firing with a scope.

A-Bolt M1000 Eclipse

This version is specially designed for long-distance sports shooting. Two major components suit it to this purpose: a heavy barrel offering superior accuracy and a Monte Carlo stock whose ergonomic grip ensures perfectly stable handling.

Hunting

EUROBOLT

Eurobolt

Without doubt the most versatile rifle on the market. Indeed, the Eurobolt is unique in that it is provided with interchangeable sights. The gun can be easily modified from a stalking rifle (with a rear leaf sight) into a driven game rifle (with a quarter rib). The trigger has a "stetcher" (set trigger) mechanism, allowing the gun to be fired with a very light trigger pull (hair trigger) for very accurate shots. The Bavarian "hog's back" stock is always perfect, both for sighting with open sites and with a scope. Supplied with 2 sights: rearsight + battue rib: to be mounted according to choice.

Interchangeable Battue-type rib and rearsight.

Folding down hammer

BLR Light Weight

This is the traditional version of the BLR. This lever action arm is at home everywhere. On rifle ranges, in the hide or when stalking where its lever loading system is extremely reassuring when you are going through difficult terrain with your gun slung or resting on your shoulder.

BLR Light Weight Take Down

The BLR is the only lever-action rifle developed in a magnum calibre. Its mechanics are faultless and characterised by their smoothness of operation, it has a removable magazine, it is ready for fitting a scope and has a top-quality barrel.

Hunting

The BLR now exists in a Take Down version, i.e. you can dismantle it for easy transport on hunting trips. No tools are required for dismantling, which is a quick, easy operation that in no way affects the accuracy of your gun.

By moving an slide on the front of the receiver and drawing back the breech, the arm is separated into two parts, barrel and fore-end on one side, stock and receiver on the other. Re-assembling is just as easy.

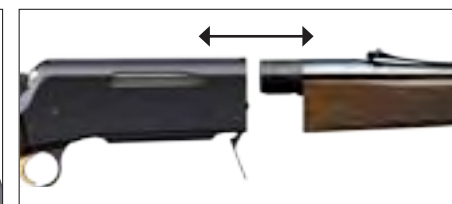

Removable magazine

The biggest revolution since the creation of the B25

Make your shotgun a natural extension of your body, design an over-and-under so unique, with such high performances that it becomes part of you and concentrate entirely on your target. It was by defining these two objectives as a starting point that the Cynergy was born. This shotgun so unique in its range has completely revolutionized the very concept of the over-and-under gun, even though it was a principle designed by Browning in 1925. The Cynergy is the best shotgun in its generation and most certainly the biggest innovation in gunsmith work since the birth of the B25 over 80 years ago.

The Cynergy is 25 % less recoil thanks to its special "Inflex" recoil pad that guarantees firing comfort totally unknown until now, plus the possibility of having a gun which fits you perfectly thanks to the three different thicknesses of recoil pad and combs supplied. The Cynergy is also the fastest 2nd shot on the market, 0.0019 s... Above all, the Cynergy is the lowest action frame, only, 60 mm, thanks to a new, exclusive hinge, guaranteed for 10 years. The Cynergy is also a choice of three different triggers, adjustable to three different positions. Lastly, the Cynergy is a unique, modern and incredibly attractive design.

And like all the Browning shotguns, the Cynergy has Back-Bored high-performance barrels, capable of firing high-performance steel shot and fitted with Invector «Diamond» Titanium chokes.

Target

 **CYNERGY**

Cynergy | Over-and-under shotguns

The biggest revolution since the creation of the B25

Since the introduction of John M. Browning's famed Superposed, the name Browning has been synonymous with innovative and reliable over and under shotguns. The best-selling B525 followed, successfully bearing the flag of Browning shotgun superiority and further enhancing Browning's place as the pre-eminent over and under shotgun company. Like the Superposed and B525, the Cynergy is more than just another shotgun, it is uniquely Browning, The Best There Is™.

1 | Innovative Design

- The most innovative over-and-under shotgun on the market.
- Developed by THE creator of the over-and-under shotgun.
- A silhouette which is classically elegant, modern and radically different.

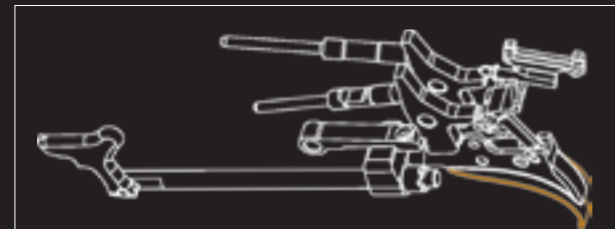

2 | The lowest action frame profile: 60mm

Its exclusive integrated hinge system offers an ultra low action frame:

- A natural extension of the shooter.
- Reduced recoil sensation.
- Reduces the barrel flip, allowing a faster second shot.

3 | Fastest 2nd barrel firing : 0.0019 seconds

- 0.0019 seconds as opposed to 0.0031 for the competitors.
- New exclusive inversed firing system.
- Use of rocker arms to inverse the direction of the impact going from the impact wheels to the firing pins.
- Reduction in the stroke of moving parts: gives sharper, faster shooting.

Cynergy | Over-and-under shotguns

Target

4 | 25% less recoil

- “Inflex” butt plate, its design and material means that more recoil is absorbed than with any other butt plate.
- The plate’s exclusive structure allows 1.5 to 2 times more absorption than with a traditional plate.
- Excellent shooting comfort, ideal for men, women and young shooters.
- Easy to adjust and economical stock length as there are 3 butt plates and an insert. 6 possible configurations give an adjustment range of 32mm.
- The Cynergy is also available in the Pro version: traditional stock

5 | Essential features

- Exceptional long-life and robustness thanks to its design and the integrated hinge system..
- Larger action frame surface, reduces both wear and rubbing.
- Mechanical inertial triggers, avoids double firing and guarantees the 2nd shot.
- Adjustable trigger with 3 positions on target shooting models which allows you to change the trigger and make a pull length adjustment.
- Linear impact wheel ejectors : straight, powerful ejection.
- Maximum safety : the only shotgun with this level of safety with both a trigger safety device, a hammer firing safety device and a rocker arm safety device.

6 | Back-bored barrels with a lightened profile : lighter and faster swing.

- New “Diamond” Titanium chokes, Titanium PVD-treated chokes which give excellent ballistic quality as well as perfect resistance to wear and corrosion.
- Chromed barrels and chambers: resist rust and makes maintenance easier.
- Steel Shot proofed for the hunting class models. All over-and-under and semi-automatic hunting and sports rifles from Browning, Winchester and Miroku which are fitted with original chokes (Invector, Invector Plus steel, stainless, Teague, Briley, Midas, Diamond, Signature) can fire “high performance” steel shot cartridges.
- 2 flat bolts located on the barrels ensure excellent locking.

Cynergy Sport | Over-and-under shotguns

Cynergy Pro Sport 12M

The Cynergy “Pro Sport” range offers guns fitted with more conventional stocks.

B525

B525 Sport | Over-and-under shotguns

Heritage Sporter 12M

The target-shooting version of the Heritage, the Sporter, has all the lines of the hunting model with its magnificent side-plates, plus ventilated upper and central ribs for optimal barrel-cooling and a perfect view when firing. The pistol grip and tulip fore-end are made from magnificent, oil finished walnut. The Heritage Sporter combines all the performances of a modern target-shooting gun with the elegance of a real luxury shotgun.

B 525 Million

A million B525s

One million ..., one million over-and-under guns! Some figures really do not need much comment at all. Just a few weeks ago, Browning proudly celebrated the manufacture of its millionth over-and-under gun in the B 525 family. A more than eloquent figure that materialises the undeniable success of Browning's over-and-under guns and opens the way for the B 525 to enter the very tight circle of legendary guns.

The B 525 is the latest evolution of a mythical gun created by the innovative and genial mind of John Moses Browning in 1925: the B 25, the "last word" in over-end-under guns. It was on the basis of this gun that the B 325, the B 425 and, since 2003, the B525 were created and produced, three arms that have now been manufactured in a million pieces, a real record. This figure attests not only to the success of the gun but, above all, to the confidence placed in Browning over-and-under guns — especially the B 525 — by hunters and sports-shooters throughout the whole world. In less than five years, the B525 has become an absolute reference, the perfect representative of Browning's quality, know-how and tradition. Its reliability, toughness and ease-of-use are legendary thanks to a faultless, much-envied quality of production. Each gun is built with unique care by qualified gunsmiths in our Japanese plant Miroku. Furthermore, for the past thirty years, Miroku has been considered one of the highest-performing production plants in the world. It is a place where care for detail and rigorous manufacturing processes are set up as rules, almost as a way of life. Every B 525 made is assembled in the traditional way using red ochre, the bearing surfaces of the bolt and action-frame are hand-filed and everything is checked and rechecked time and time again, so that neither time nor the thousands of cartridges to be fired will have the slightest effect on the gun.

It is at this price that we are able to guarantee Browning 525 action-frames for 10 years and that every gun is at the same time identical to the others, yet unique in itself.

To celebrate the millionth gun produced, Browning is proud to announce the creation in 2009 of a special, limited, numbered series. Only 250 guns will be made in the hunting version and 250 in the sports shooting version. These "one million" B 525s with top-quality finish using the most carefully selected woods will also have an exclusive engraving, specially designed for this truly special occasion.

These two B525 Trap versions are perfectly designed for Trap, they benefit from a stock and forend whose dimensions have been carefully studied, a rib which is 13 mm wide and long barrels. As for the Advance model, it is finished with magnificent English style engraving and superior quality wood.

SA.22 – BL.22 – Buck Mark Rifle | Rifles

SA.22 – BL.22

BL .22

This gun, with its undeniable “Wild West” charm features a very short travel lever (33°), external hammer and magazine tube. It also allows the possibility of mixing all types of cartridge (long, long-rifle, short) without risk of jamming.

SA .22

This much copied, never equalled rifle has been continually produced since 1924 and has something for everyone:

- operation in “blow-back” mode (unlocked breech operated by gas)
- automatic ejection, cocking and loading
- loading through the stock (the magazine tube is pulled to the rear and the cartridges are dropped one at a time into an opening in the stock)
- bottom ejection
- barrel take-down with wear adjustment

Browning recommends the use of ammunition by Browning and Winchester

T-Bolt | Rifles

T-BOLT

T-Bolt Sporter .22 / 17HMR

In the language of today, this rifle is a «vintage» model. To be completely clear, we should say that it is a re-edition of a best-seller, a legend. The .22 LR rim-fire rifle, used by so many for firing their first-ever rounds, is back, similar to the old version in terms of aesthetics, but with mechanics that have been considerably modernised. The T-Bolt still features its straight-pull bolt that chambers cartridges from a special 10-round rotating magazine. The arm's accuracy is notably due to its floating barrel.

T-Bolt Sporter Composite .22 / 17HMR

This version is equipped with a high quality ergonomic composite stock for intensive use under all conditions. The stock cheek-piece is slightly raised which makes improves the fit when used with a scope. Another very useful feature, an extra magazine is integrated into the stock, fitting flush in the pad. In rapid firing conditions, this makes it very easy to change your empty magazine without losing a second.

(**) URX : Ultragrip RX

(***) UDX : Ultragrip DX

The Ultragrip RX™ and Ultragrip DX™ represent the very latest in grip technology.

These new grips have an ergonomic profile with the contour and texture of the checkering combining to offer ideal handling. Your hand will automatically take hold of the grip in exactly the same place on every shot, resulting in more instinctive shooting and improved accuracy. The textured surfaces are comfortable and effective under all conditions and for all ergonomic variations.

Operation

The Blowback action of Buck Mark pistols makes for simpler, more reliable operation.

Slide

The two reinforcements on each side of the slide offer excellent grip. The slide-stop release can easily be activated with either hand.

Barrel

Many models have heavy barrels for improved stability. All chambers are hand-reamed and muzzle crowns are recessed to protect the grooves from damage that could degrade accuracy.

Rear sight

The Pro-Target™ sight with its 16 clicks-per-revolution adjustment is mounted as standard on all models. This sight provides a more accurate range of adjustment than standard 12-click sights.

Front sight

Plus models are equipped with a Truglo®/Marble's® fibre optic front sight.

Receiver

While most of the .22LR pistols on the market are cast or manufactured from sheet metal stampings, every Buck Mark receiver is CNC machined from a 7075-T6 aluminium block to fine tolerances.

Magazine

The magazine body is heat-treated for long-term charging reliability. Its coil spring enables a more regular, stable feeding action to be achieved than the usual "Z" spring. Ten-round capacity.

Magazine release

Positioned near to the trigger guard for extremely handy operation.

Trigger

Offering great performance compared with the competition, the trigger break on Buck Mark pistols is light, crisp and precise.

Safety catch

Large manual safety catch with thumb setting. The trigger is disconnected when the magazine is removed for greater safety.

Pistol grip

Several varieties of wood, laminates and composites are available. The rubber Ultragrip RX™ (URX) and wooden Ultragrip Deluxe™ (UDX) ambidextrous grips provide a perfectly ergonomic hold.

GP | Hand Guns

GP Silver Chrome

The GP also exists in a Silver Chrome version, equipped with an adjustable backsight that can be adjusted for both windage and elevation and a sport foresight with a rounded base. It is also fitted with Pachmayr grips to provide improved handling. A handsome gun with its blued and chrome finishes.

GP MK III S

The GP MK III S combines all the qualities of the original HP with an ambidextrous safety and a weight (910 g) that makes it a safer and more accurate gun to handle. It is also fitted with Pachmayr grips for improved handling. A handsome gun with its blued and chrome finishes.

Target

GP Practical adjustable

The GP Practical has been developed to meet the stringent demands of "Practical Shooting". It includes numerous improvements, such as :

- Adjustable, low profile sights
- Particularly crisp trigger pull
- Ultra precise handling through the use of Pachmayr chequered rubber grips
- Hammer redesigned to avoid getting caught when drawing
- Increased weight and improved stability
- Ambidextrous (left/right) with retained magazine safety
- Larger magazine entry in the frame
- Ejectable magazine equipped with Pachmayr rubber buffer
- Particularly corrosion resistant finishes

BROWNING
The Best There Is[®]

Hate being sweaty, stinky, wet and cold ?

1 – BASE Layer

1

2 – INSULATION Layer

2

3 – PROTECTION Layer

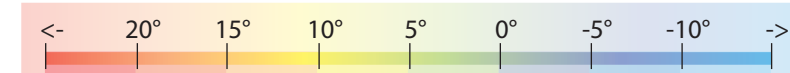

3

Browning has a solution:

Select the best clothes on each layer to achieve optimal comfort in any situation !

WARMER WEATHER COLDER WEATHER

1 - BASE Layer

The Base layer is critical to controlling core body temperature. It should fit snugly and be right next to the skin to properly insulate and wick moisture away from the body to keep wearer dry. Staying dry is of utmost importance not only for comfort, but also in the cold where being wet under the clothes can cause radical temperature fluctuations and lead to hypothermia. This is most noticeable during physical activity where it is easy to overheat and perspire, often leading to a drop in body temperature once the activity stops.

Name of garment

Transitive								
NTS								

2 - INSULATION Layer

The Insulation layer allows the wearer to adjust to different outside temperatures and activity levels to maintain a comfortable core body temperature. These highly versatile garments can be worn as a middle, insulating layer between the BASE and PROTECTION layers, or can be worn as the outer layer in drier weather.

Genesis Jacket								
Genesis Vest								

3 - PROTECTION Layer

The Protection layer is the first line of defense against rain, snow, sleet, wind or any combination of elements that conspire to make hunters miserable. In this category, gear is either completely waterproof or highly water-resistant, yet breathability is not ignored to help prevent the wearer from getting wet on the inside.

XPO BIG GAME Insulated								
XPO Grand Passage								
XPO Big Game Packable								
Dry-Lite								

4 in 1 : Combination of Insulation + Protection layer

4 in 1 parkas combine a protection and an insulation layer. They can be used separately for maximum versatility.

The most advanced hunting gear

HYDRO-FLEECE® A.T.™ 4-IN-1 PARKA

Code	30378414-•
Description	hydro-fleece A.T. gore-tex 4 in 1
Colours	Mossy Oak Break Up
Sizes	M-3XL

New Quiet Technology Gore-Tex® construction provides the ultimate waterproof, windproof, breathable protection • Odorsmart antimicrobial moisture wicking lining

Shell: Set-in sleeves with one piece, no-seam construction • Two oversized spill-resistant bellows pockets with magnetic closures • Mesh moisture barrier strip between outer shell

and lining • Handwarmer pockets behind bellows pockets • Two Expander System pockets with cartridge loops • Two handwarmer pockets on the chest • Detachable three-piece hood with one-hand adjustable closure and separate height adjustment • Lightweight neoprene cuffs with molded hook and loop tabs • Full-length front zipper closure with double-pull YKK® zippers • External and internal zipper flaps • One inside security pocket with zipper closure • Internal waist drawcord

Liner: Quiet camo shell fabric reverses to solid color nylon taffeta lining • Thermore® insulation with Odorsmart antimicrobial technology • SelectWeight™ insulation distribution • Set-in sleeves • Two pocket s on each side • Elasticized waist • Rib knit cuffs

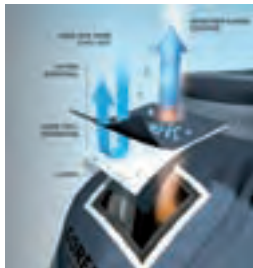

Molded shoulder tab keeps firearm sling in place

Two oversized no spell bellows pockets with magnetic closure

Two Expander System Pockets keep ammunition within easy reach

All GORE-TEX® products are durably waterproof, windproof and breathable, keeping you dry and comfortable.

Thermore® THK product line offers maximum design flexibility for maximum performance.

SelectWeight™ insulation places different weights of insulation in various parts of the garment. The patented SR (Special Reduction) process allows a variance of thickness without a proportional loss in thermal value.

Revolutionary new OdorSmart™ gives you an advantage in the game field that can make the difference between success and going home empty-handed. The secret is controlling odors before they become a problem.

What causes odor ? Specific bacteria thrive on human skin. When they metabolize, their waste produces odors that can be detected by deer and other big game animals.

How does OdorSmart™ work? Simply stated, OdorSmart™ attacks the bacteria on the skin and in the «microclimate» immediately around the skin, killing them BEFORE they have a chance to develop odors.

How long does it last and do I have to «recharge» it ? With just normal use and care, OdorSmart™ will last for the life of the garment and does not require recharging or other special care. Just launder as instructed on the care label.

OdorSmart™ technology is available in lining materials where it inhibits the growth of bacteria, and also in insulations where it attracts and neutralizes odor-causing bacteria in the structure of the insulation thus keeping it off the skin. The combination of OdorSmart™ in underwear, linings and insulation provide multiple layers of defense against odors.

If only the best is good enough, Hydro Fleece is the only choice

Detachable three-piece hood with height adjustment

Silent, Odorsmart® lining, Thermore® insulated and detachable for even more polyvalence.

All seams are eliminated with the moulded share, for maximum freedom of movement

Handwarmer pockets behind bel-lows pockets and on chest

XCHANGE
SYSTEM

Game bag in the back

Two expander system pockets with shell loops

One-handed height adjustment on hood
One-handed cord adjustment for front hood closure

Featherweight neoprene cuffs eliminate bulk and provide a watertight closure

Mesh barrier strip between shell and lining prevents water from wicking into the lining

Performance in all conditions

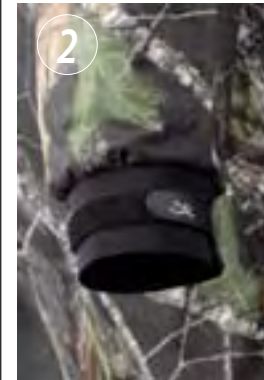

The Browning XPO (eXtended Performance Outerwear) lines is designed to be tough, comfortable and practical gear for hunters.

It withstands the most severe outdoor conditions that Mother Nature can send. XPO outerwear features Pre-Vent® fabric, a waterproof, windproof, breathable laminate that ensures protection from wind and rain in difficult conditions.

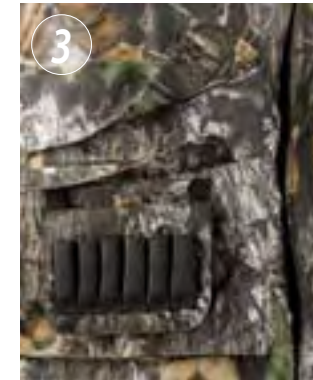

Importantly, Pre-Vent® does all this at a very competitive price. Hunters can't predict the weather, but they can predict the excellent protection and comfort they'll get from Browning's XPO Series featuring Pre-Vent® fabrics.

Removable zippable lining

Handles in waterproof neoprene

Large pockets with a silent magnetic closing system

Pocket expander System

Waterproof :

100 % waterproof Pre-Vent® fabric will keep you dry and comfortable in all conditions, whether it be light drizzles or torrential rain and snow storms. All seams are taped to prevent water entry.

Windproof :

Cold winds that cut to the bone are quickly neutralized by the windblocking characteristics of Pre-Vent®. From light breezes to heavy gusts, Pre-Vent® blocks 100 % of the wind, keeping you protected and warm.

Breathable :

Temperatures and activity levels while hunting are constantly changing. Pre-Vent® allows excess heat and moisture to vent away from your body, providing invaluable comfort and versatility to your days afield.

Thermore® THK product line offers maximum design flexibility for maximum performance.

Selectweight™ insulation places different weights of insulation in various parts of the garment. The patented SR (Special Reduction) process allows a variance of thickness without a proportional loss in thermal value.

Hi-Viz® Magni-Opti Sight

- Magni-Sport includes 5 screws sizes 3/56, 3X.5, 3X.6, 5/40 and 6/48 will fit most guns

Code	12854	12870
Colours	1 green, 1 red	magni sport magnetic sight

• Patent pending technology solves cross-eye dominance by making the sight visible only with the shooting eye, enabling any shotgunner to shoot with both eyes open for improved target acquisition and better hand/eye coordination

• Improves shooters of all levels by refining shooting form and head-to-rib alignment and with correct head position on the stock in order to see the sight.

• Includes one green and one red LitePipe

• Magni-sport Includes two sizes of magnetic bases to fit the rib of most shotguns and two green and two red LitePipe

Hi-Viz® Bird Buster magnetic shotgun sights

- All Browning HiViz® Bird Buster magnetic sights come with four interchangeable LitePipes of different diameters for different light conditions
- Includes three different sizes magnetic bases to fit the rib on any shotgun
- Fits all BROWNING Shotguns

Code	12859
Colours	4 Litepipe interchangeable

Outdoor

Hi-Viz® Comp Sight

- Metal base threads directly into the bead of shotguns for a more permanent sight picture
- Interchangeable LitePipes allow shooter to match light pipe diameter and color to shooting conditions
- Includes eight LitePipes of different diameters and colors
- Allows the shooter to know exactly where the barrel is in relation to the target
- Key and custom carrying case included
- 5 screws sizes 3/56, 3X.5, 3X.6, 5/40 and 6/48 will fit most guns

Code	12850
Colours	1 white, 4 green, 3 red litepipes

Hi-Viz® 4-in-1 Game Sights

- HiViz® 4x1 Game sight includes both front and rear sights, making the 4-in-1 perfect for deer, turkey, waterfowl and upland hunting
- Injection-molded optical-grade resine sight construction
- Rear sight is fully adjustable for windage and elevation
- Light-gathering Litepipes make low-light shooting effortless
- Mounts easily with no gunsmithing required

Code	12893
Description	4-in-1 game sight
