Hunting & Shooting 2010

EXQUISITE PASSION

Browning

Exquisite passion

Since 1897, the year when the first Browning gun was made, millions, even tens of millions, of shotguns and rifles for hunting or target shooting have been created and manufactured by Browning.

The inventor of the semi-automatic shotgun, Over-and-Under shotgun and, semi-automatic rifle, and most recently, an Over-and-Under gun with the lowest action frame and fastest firing system on the market.

This has left its mark on the history of gun-making with a wide array of models, all different, but with one thing in common – their reliability and their unparalleled levels of performance. Every day, throughout the world, Browning guns, old or new, smooth-bore or rifled, perform on the range or for hunting, providing great pleasure for their owners.

Target shooters, hunters, and collectors can find in these fascinating items a pleasure that is renewed endlessly. Among makes of weapons, just as with makes of watches or cars, there are some whose history is part of the reputation of the entire industry. Browning, for example.

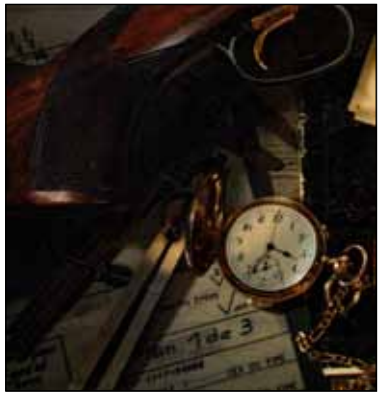
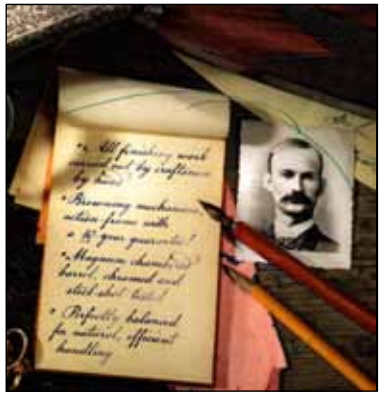
John Moses Browning was born on 23 January 1855, in Ogden, 35 miles north of Salt Lake City (Utah, USA), between the Great Salt Lake and the Wasatch-Cache National Forest.

Gun-making ran in the family of the young John Moses, as his father was a gunsmith who had already been responsible for a number of innovations in the field. As a young boy, he spent time in his father's workshop, and knew the name of every part of a gun before he could read.

From the age of 6, he made fishing accessories from scraps of metal which he hammered into shape on a child-sized work bench made from a wooden crate. His 19th-Century American boyhood abounds with anecdotes, all of which point towards him becoming an internationally renowned inventor of genius.

Innovation and invention





It didn't take long for those who had observed his creative traits to make up their minds: at the age of just 23, Johna Moses lodged his first patent, for the "J.M. Browning Single Shot Rifle". This invention simplified the percussion mechanism, making it more durable and reliable.

Shortly before his death, his father handed over his business to John Moses. With his brother Matt, even with less than one thousand dollars in the bank and no experience of machine-tool operation, young Browning transformed the humble store into a small gun making workshop with seven employees.

The remoteness of their store, the low number of ready customers, and the lack of capital meant that the business struggled to survive until luck intervened to make the inventor's talents known to a connoisseur: a representative from Winchester.

In another state in the US, this representative had come across a gun made by the Browning brothers. Firmly convinced of the interest of their conception, he bought it from its owner and sent it to his superiors in the company's head office. So impressed were they that the managing director of Winchester himself set out straight away on a six-day journey to what, at that time, was still the Wild West - the real Wild West, to meet the Browning brothers.

Despite his astonishment at finding two young men in their twenties in a rustic workshop, the man was perceptive enough not to be fooled by appearances and signed commercial deals with them as soon as he could. The decision was a wise one: these agreements would last for several decades.

Browning had a future. Over the years, Browning granted licenses to several manufacturers for dozens of inventions and firearms. He invented almost everything in the field of firearms. The creativity and level of perfection of his inventions were so significant that the vast majority of his technological innovations could not be improved upon or replaced for several years.

The world of firearms is like the art world: the success of creators depends on the interest of well-informed amateurs. In 1897, it was one of the directors of the Fabrique Nationale (National Weapons Factory) at Herstal in Belgium, who noticed a 7.65 Browning pistol incorporating a new locking mechanism. He saw the appeal straight away and the NWF obtained the manufacturing license.

Thus began an uninterrupted period of collaboration between the inventor from the Great Salt Lake and the factory on the banks of the Meuse River.

Browning reached the pinnacle of its craft with the Auto-5 semi-automatic shotgun, which was a tremendous commercial success and prompted John Moses' first visit to the Herstal workshops.

But his world-wide acclaim is without doubt due to the 9 mm Hi-Power semi-automatic pistol. More than 10 million of these legendary pistols have been sold. Starting in 1907, it was adopted by most police and armed forces across the world. The fact that the generic name for this type of gun is "Browning" demonstrates the universal acclaim and recognition it has received.

Browning's success is not at all the result of chance. Like all American pioneers of that time, he turned luck to his advantage only through an enormous amount of hard work. His strength of character and the steadfastness of his principles were out of the ordinary.

Thus it was that, towards the end of his life, when offered an honorary title by a university, he refused it for the simple reason that "he had made it a rule never to accept anything that he had not earned as a result of his own work."

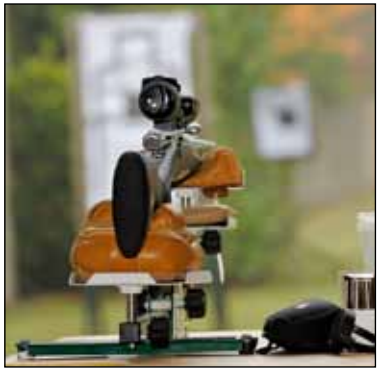
In 1925, John Moses Browning put the finishing touches on the prototype of an Over-and-Under which would change the history of the hunting shotgun. He called it simply B25, for "Browning 1925".

He died of a heart attack while working in his office in Herstal on 26 November 1926. It was his 61st visit to Belgium.

His body was repatriated to the United States, where he was buried with full military honours. His son Val continued his collaboration with the Belgian factory without interruption.

That collaboration continues to this very day.

Browning's quality demands



The qualification of new products

Before they are launched in the market, Browning firearms are subjected to several very strict tests that are specific to Browning, known as the B.A.C.O. (Browning Arms COmpany) tests.

No product will be authorised if it does not fully satisfy the demands listed below.

We also carry out a full and complete systematic inspection of each serial gun, which consists of a wide number of controls to ensure that each gun put on the market will bear Browning's criteria of quality, performance, and reliability.

B.A.C.O. QUALITY PROCEDURE

1 Tests of functioning and endurance

Highly demanding tests are carried out both for shotguns and for rifles, and have the purpose of verifying the correct functioning of the guns, regardless of the types of cartridges or shells used.

Thousands of cartridges are fired to test the reliability of the guns, no broken parts are tolerated during this test, and excessively worn parts are also unacceptable.

If any of these faults are found, there is a systematic return to the Research and Development department.

2 Tests in extreme conditions

During the development of a new product, this test has the purpose of testing the guns in the worst climatic conditions, with polar cold of –30° C or very hot temperatures of up to +50° C.

The gun must function perfectly at these temperatures with a wide range of cartridges.

You can therefore use our guns in the most difficult conditions, in all circumstances, and with total confidence.

3 "Torture tests"

During the development of a new product, it is subjected to several tests, greatly superior to the C.I.P. norms in force, which are known as "torture tests".

The firearms are subjected to overload and obstruction tests to ensure the solidity and reliability of our guns.

We also perform safety tests, consisting of a series of drop tests on all its sides to verify the reliability of its safety.

The legendary solidity and reliability of Browning firearms are largely due to their successfully passing all these tests.

4 Gun checks

During production, each gun is subjected to several visual checks as well as numerous measurements of its dimensions. All guns must meet the specifications in all points.

5 Gun tests

100% of the weapons produced are fired to confirm their accuracy and proper functioning.

6 Accuracy tests

We verify the precision of each gun that leaves our production workshops.

For shotguns, we check the quality of the shot patterns as well as the correct convergence of the barrels at 35 metres.

For rifles, we verify the accuracy and grouping of each weapon.

BROWNING® Partner Lodges

The Browning B525 is already appreciated by more than a million hunters for its many qualities, and most especially for its unequalled sturdiness in the field. In collaboration with the brand "Magic Safari Lodges" and the hunters' travel agency "Orchape", some "small game" destinations are suggested in Argentina, Burkina Faso, Kazakhstan, Chad, and Spain. These are now "Browning Partner Lodges". Several B525 shotguns are made available to hunters at each location. This free service that offers the opportunity to hunt with a legendary shotgun will also allow you to avoid the problems and possible hazards of travelling by air with a gun.

CORTIJO SOTO REAL – Spain

A unique sporting challenge awaits you at Soto Real. An authentic five-star hunting lodge set among the palm trees, bougainvillea, and orange trees of a working estate in the rolling hills of Andalusia. Driven red-legged partridges are hunted from October until March and walked-up quail from July to September.

You can truly expect a challenge above and beyond the usual at Soto Real.

CAMPEMENT DE L'ELÉPHANT – Burkina-Faso

The walked up hunt of francolins and guineafowl is the specialty of the Campement de l'Eléphant with equally very nice passes for turtle doves and sand grouse on specially equipped water holes.

The season runs from December to March. Hunters will find a comfortable camp (air conditioning, swimming pool) and a change of scene in the African bush.

VERACRUZ – Argentina

Veracruz Camp (host Luis Infante de San Javier, often called "the Portuguese") is the benchmark for duck hunting in Argentina.
The season unwinds from February to July in the rice paddies, marshes, and islands of the Paraná River.

Turtle doves are hunted year-round with the possibility of firing more than a thousand rounds per day.

CHOKALY – Kazakhstan

Hunting in the marshes of Chokaly is a unique experience for enthusiasts of diving ducks, geese, and teal.

The season lasts from the end of August to mid-November, as well as two weeks in March when the birds are in breeding plumage.

A new lodge provides a comfortable hunt in this little wild part of Asia.

KOULOUDIA – Lake Chad - Chad

The new air-conditioned Kouloudia Camp, three hours from N'Djamena, offers extraordinary hunting for teal, pintail, shovelers, and African ducks.

The season runs from November to March in the flooded areas of Lake Chad cultivated by the villagers and where the ducks come to feed.

An exceptional custom-made gun

Imagine a custom firearm that's uniquely yours, with intricate engraving and a beautiful finish on every component. Each piece is hand-fitted to ensure strength and reliability.

Your can have one of these for yourself from the Browning Custom Shop in Liège, Belgium. A custom Browning gun is the result of time-proven designs and manufacturing, as well as customisation, that always produce a firearm that will be enjoyed for generations. Shown are some of the popular engraving patterns, but you can also create a pattern that is uniquely your own.

The B25 is the last creation of the world's greatest firearms inventor, John M. Browning. Its design represents the culmination of decades of ingenuity, experience, and wisdom in firearms. It is, to this day, the finest and most respected Over-and-Under weapon in the world.

The feeling one receives by owning a B25 is no different than owning a piece of art by one of the great masters.

The B25 is a true masterpiece. The design of the B25 reflects John Browning's knowledge of hunters.

He knew they preferred a single sighting plane and a single selective trigger. He fulfilled their desires with his unique ability to achieve perfect balance, economy of proportion and eye-appealing design.

The B25 has been made in its totality in Belgium since 1931.

The Custom Gun Shop of the National Factory at Herstal can carry out practically any customisation work you might desire.

These firearms will be entirely assembled, adjusted, and engraved in Belgium according to the personal specifications of our clients.

How To Order

All orders for products from the Custom Gun Shop must be sent to your Browning Dealer Partner.

The specifications will be examined jointly with the Custom Shop in Belgium, and a price and a delivery date will be fixed.

Once the order is sent to the factory, it is considered as final and may not be cancelled.

Options

As each Custom Shop item is an exceptional weapon, we offer you numerous possibilities for customisation and adaptation, according to your wishes.

The principal options offered are the following:

Grip cap

Tear drops

Concealed pad

Metallic pad

Three-piece forearm

Available engravings and finishes

Heritage Hunter 12M

B5·25

B525

The shotgun with the best performance and the greatest reliability.

The B525 above all, it is mechanically immaculate and flawless.

From the forged-steel action frame to the wide flat bolt passing through the massive hinge pin or the chromed bore of the barrels, everything on this shotgun is ultra-resistant, incredibly reliable and made to offer you the same performance, season after season.

The semi-hand-made manufacture of this weapon explains its impeccable quality. Hand-made construction rules for this shotgun, which is assembled a first time (known as a dummy run), before being polished, engraved, oiled, and then finally reassembled.

During each of these assemblies, the contact surfaces are checked with red ochre for the metal, while the wooden parts are filed to an exact fit.

It is this attention to detail, this quest for perfection and our respect for the traditions of the gunsmith, that gives the B525 its justified reputation for longevity.

The B525, the fifth generation of Over-and-Under Browning hunting guns built on the basis of the famous B25, has all the history and tradition of Browning concentrated in one gun.

Heritage Hunter 12M

Here is the new top of the line of Browning's Over-and-Under hunting shotguns.

The Heritage model is the direct descendant of the side-plated B25, and shares its elegance. The engraving of its action frame was created by Cesare Giovanelli, the master who trained most of today's Italian engravers.

The buttstock is made of luxurious walnut, carefully finished with oil.

With its rounded half-pistol stock and its tulip fore-end, this shotgun is a true homage to the B25, as well as its rightful heir.

The Browning Heritage - luxury available to the all owners.

Gauge	12 M
Chamber	76 mm
Barrel	71 - 76 cm

B525 Hunter Light

B525

	B525 Hunter Light Classic 12M	B525 Hunter Light Elite 12M	B525 Hunter Light Classic 20M	B525 Hunter Light Classic 28
	The B525 Light Classic constitutes the ultimate synthesis of effectiveness, weight, and styling. An action frame made of a lightweight "Aircraft" grade alloy reinforced with high-strength steel inserts, a light Back Bored barrel profile, and finally a choice of wood and appropriate shaping give this shotgun perfect weight, balance, and feel in the hands.	The B525 Light line is completed with this Elite model, offering richer and more engraving with gold plating. The buttstock and forearm are made of grade 3 walnut and then finished with oil.	Only 2.7 kg! The B525 Classic Light 20 or 28 gauge is the lightest of the Browning hunting Over-and-Under hunting guns. The action frame of light alloy with a steel insert on the side and a careful choice of wood (which is finished with oil) have allowed us to reach such a light weight.	The B525 Classic Light 28 gauge gives the pleasure of small calibres with more life and better handling.

	B525 Hunter **New**	B525 Hunter Elite 12M & 20M	B525 Hunter Prestige 12M & 20M	B525 Hunter Classic 20M & 28
	The new B525 Hunter combines beauty, lightness, and balance. A completely new engraving of a hunting scene livened with small bouquets decorates this new B525. This exquisite engraving covers and adds value to the main working parts. The weight and balance have been completely reviewed and improved thanks to new, lighter barrels.	The Hunter Elite is the ideal compromise between elegance and effectiveness. Its new lightweight Back Bored barrel assembly is chambered for magnum and proofed for steel shot. The re-designed barrel profile has allowed a consequent improvement in weight, and the result is a B525 Hunter that is lighter and better balanced.	This elegant, refined model has a discreet charm. Its buttstock, made in superb grade 4 oil-finished walnut, has a medallion and sculpted teardrops on each side plate. Its fine engraving, finished entirely by our master engravers, and the very beautiful old silver colour of its action frame make it into an elegant firearm in the best of taste.	Reprising the characteristics of the Classic, this B525 sets itself apart with its new engraving and its English grip, which give it a very delicate line.

The characteristics of the B525 line

The benchmark

When you buy a Browning B525, you are not just buying the heritage and experience of more than 80 years of excellence; you are also buying a shotgun that represents the 5th generation of the legendary B25. The Browning B525 is a more than worthy descendant of this exceptional shotgun and, much like the B25, the Browning B525 has become the benchmark for the industry since its first appearance in 2003.

The Browning B525 is the benchmark product in the world of Over-and-Under shotguns, as the most reliable and best-performing shotgun in its price range.

Renowned for their exceptional quality of manufacture, each shotgun is hand-assembled. We offer a wide range of options to meet all the needs of sport shooters and hunters.

1 The most reliable and best-performing line

One of the many qualities of the Browning B525s is that they are perfectly balanced, which allows excellent performance in clay pigeon shooting and hunting.

The balance of each shotgun is improved still further by its hand-made quality, which makes each gun a one-of-a-kind piece.

The B525 is so well-balanced in your hands that you forget that you are holding a gun, since it becomes an extension of yourself, allowing you to concentrate completely on your target, whether it is game or a clay.

Each B525 uses a patented action frame made of indestructible forged steel, with the oversized hinge pin that is typical of Browning and that guarantees solidity and resistance to wear.

Browning is so sure of this system that the action frame of each shotgun comes with a 10-year warranty. The hinge pin of the B525 assures particularly sweet opening and closing. Without having to push it every time, you can literally feel the mechanism locking inside.

All Browning barrels and chambers are manufactured in chromium-molybdenum steel, which is very resistant to corrosion and easy to maintain after a day of shooting.

High performance steel shot can be used in all B525s fitted with Invector chokes.

The B525 is totally reliable thanks to its system of hammer ejectors.

The B525 is therefore the gun that provides the best regularity of extraction and power of ejection after each shot.

2 Hand-manufactured for style and guaranteed performance

The Browning B525 is not mass produced; instead, each gun is made individually starting from its own unique components.

The gun moves from one gunsmith to the next to be entirely made by hand, thanks to the expertise acquired over many years by each of the gunsmiths.

It takes more than 4 months to make a Browning B525, owing to the attention required for the assembly of each gun.

The Browning B525 is the only shotgun on the market in this price range that offers so many different options and that is hand finished.

The shotgun produced in this way is unique and has a level of quality so that it matches perfectly to its owner and provides him with the reliability and longevity that are Browning's trademarks.

This time-tested manufacturing method is different from all the others on the market since our highly qualified gunsmiths rely solely on their own expertise and knowledge to make your B525.

The result is a shotgun that is absolutely one-of-a-kind and whose parts are not interchangeable with those of other B525s.

It is said that our gunsmiths give each B525 'a little bit of their life', which makes each one unique; all of the elements of the shotgun are fitted with such precision that each B525 performs as you would expect it to time after time.

During every stage of manufacture, extreme care is given to make a shotgun that sets the standard for all shotguns, which includes the finely adjusted trigger pull weight that always meets our specific criteria for optimal performance.

3 Hand fitted to create the best there is

Browning's gunsmiths take their time when making a B525.

This is the only shotgun on the market at this price level that is hand fitted during production to such a high performance level, making each shotgun truly unique.

Traditional red ochre is used to check that the fit between the action frame and barrels is perfect.

This method is the best traditional procedure to guarantee a perfect fit between all the parts in wood and metal.

It literally allows the gunsmith to "look into" the gun.

The needed adjustments are made by hand, one by one, to ensure that the Browning B525 sets the standard for all other shotguns.

The attention to detail in the making and fitting of each and every Browning B525 is unique, just like the "Browning feeling" as the locking pins meet when you close your gun.

It makes such a reassuring, perfect sound that it gives you the desire to go out and shoot.

All of the B525 action frames are guaranteed for ten years.

4 A choice of wood grades and buttstock options

Each buttstock is made using specially selected walnut sourced from renewable forests in Europe and a choice of grades are available from 2, 2.5, 3, 4 and 5.

The grade of walnut used on your Browning B525 depends on the level of finish for the gun that you decide to purchase.

Different choices of grip are available, including a pistol grip, a round pistol grip, an English grip, and the "Short" version; but there is also a choice of different drops in the great diversity of stocks on offer.

Each stock is traditionally chequered providing additional control whilst shooting. The time and care taken over the fitting of the stock to each B525 ensures that each and every gun is perfectly balanced.

Recognising that we are all different, Browning also produces a B525 that is suitable for left-handed shooters, and adjustable triggers with 3 different positions are provided on all Sporting models.

5 Safety

Every single B525, as with all Browning shotguns, undergoes extremely stringent quality checks that include manual inspections and measurements, up to actually firing each and every gun to check that the shot patterns meet our exacting accuracy standards.

Additionally, it is supported by using computerised analysis to guarantee proper functioning and extreme reliability in each gun.

So when you are out in the field, you can be assured that the gun you are using will never let you down.

6 Back-bored barrels

Browning delivers the secret of the pros to you: BACK-BORED barrels

Better impacts, increased shot speed: complementary features to get your targets. A barrel is said to be "back bored" when its interior diameter (diameter of the bore) has been increased beyond the classical specifications:

- Increase in speed and penetration
- Recoil reduction: -6%
- Improvement of patterning

All B525 barrels equipped with Invector or Invector+ chokes have been proofed with high-performance steel pellets.

Cynergy Hunter Light Grade 3 12M

Cynergy

Take a step forward!

80 years after the invention of the B25, Browning has created yet another revolution in the world of Over-and-Under shotguns with the Cynergy. Years of research and testing have been required to develop this reliable, high-performance, elegant, and effective shotgun. Browning takes much pride and pleasure to introduce you to the Cynergy Hunter!

So that you, the hunters, can benefit from the technical characteristics and ballistic performance of a shotgun that is unique in its field.

The Cynergy includes:

- The lowest action frame on the market: 60 mm
- The fastest second shot: 0.0019 s
- The low action frame with its integrated hinge gives this incomparable gun exceptional balance and incredible strength.

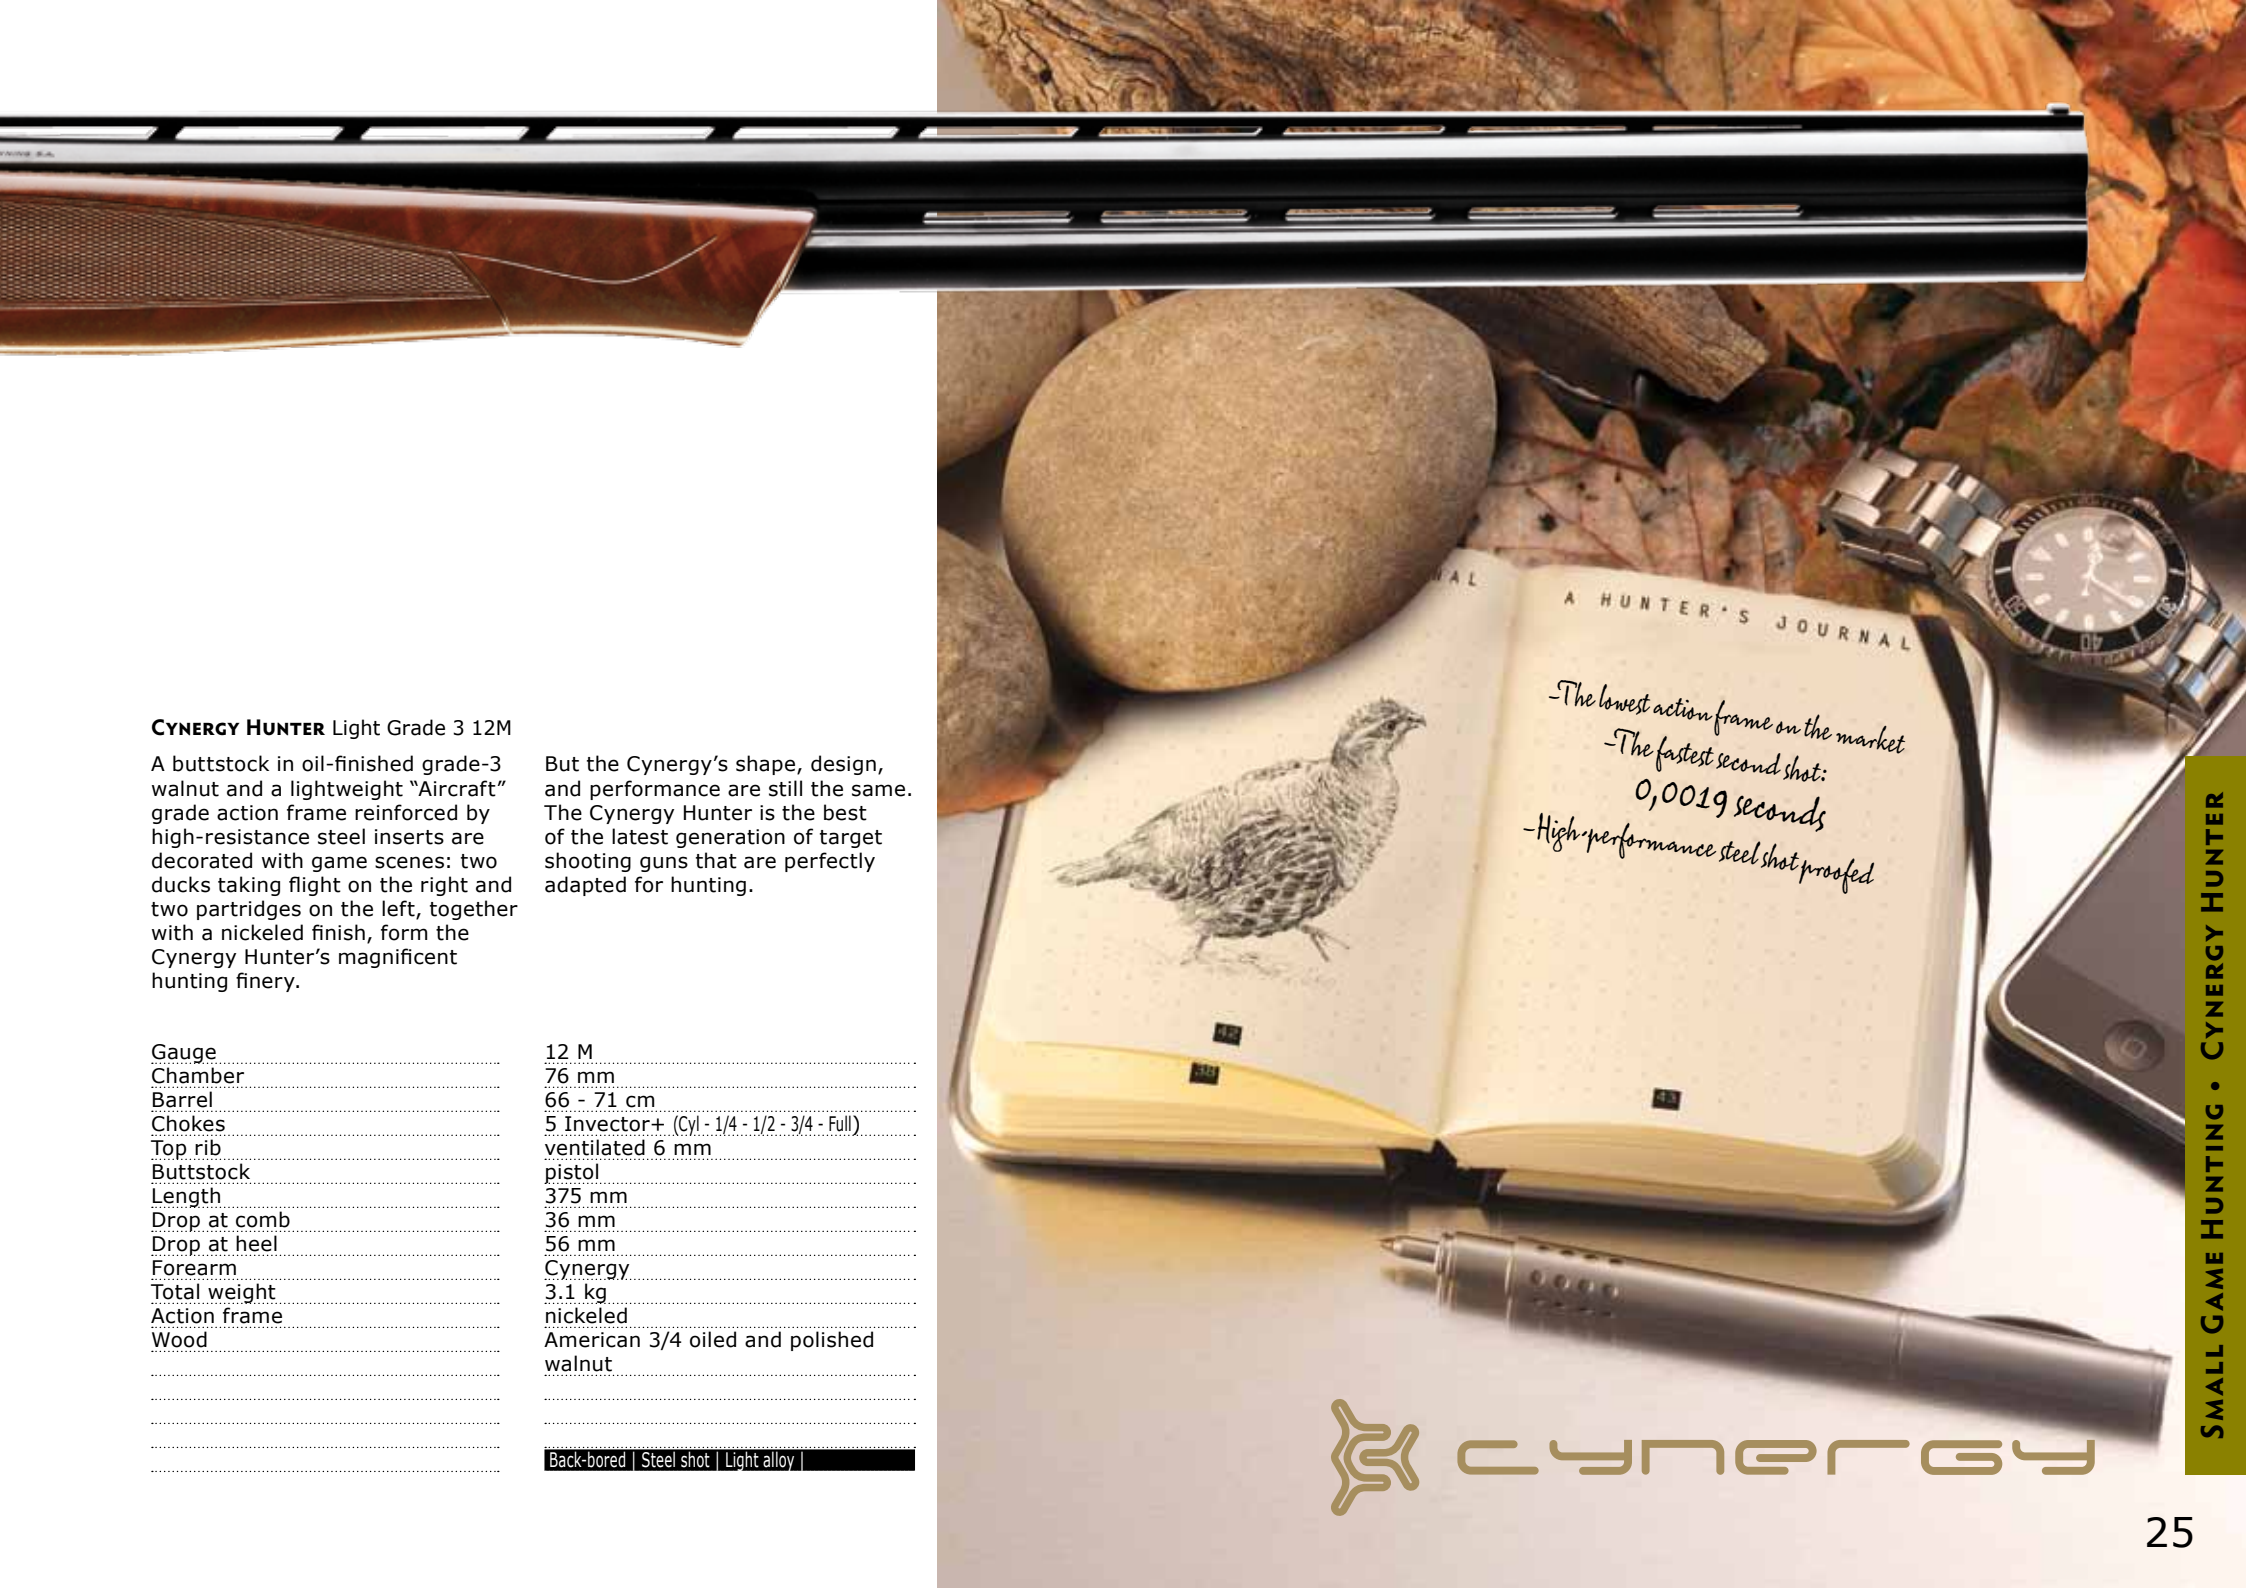
To support these claims, Cynergy's action frame comes with a 10-year warranty. Shouldering the Cynergy is a perfect, fluid, rapid movement; and the comfort when firing is exceptional. You are in line with a weapon that has virtually no recoil, and the muzzle flip between two shots is so low that the second shot is even faster. The Back-Bored barrels of the Cynergy also allow the firing of high-performance steel shot.

The Cynergy is also a model of style, both modern and attractive, an innovative design characterised by its smooth flowing lines and slim silhouette.

The Cynergy's single trigger action will give a sensation that you have never experienced before: incredibly fast, crisp shots; in fact, they are the fastest in the world.

Due to the special firing mechanism on this shotgun – in a class of its own – the time between first and second shots is only 0.0019 seconds, compared to 0.0031 for our leading competitors.

The Cynergy is now available as a hunting gun, in 12 Magnum gauge with a steel or light alloy action frame and in 20 Magnum gauge with a steel action frame. The Cynergy hunting gun's extremely elegant line is characterised by the quality of its grade 3, oil-finished wood, but also by the hunting scene engravings on its nickeled action frame.



Cynergy Hunter Light Grade 3 12M

A buttstock in oil-finished grade-3 walnut and a lightweight "Aircraft" grade action frame reinforced by high-resistance steel inserts are decorated with game scenes: two ducks taking flight on the right and two partridges on the left, together with a nickeled finish, form the Cynergy Hunter's magnificent hunting finery.

But the Cynergy's shape, design, and performance are still the same. The Cynergy Hunter is the best of the latest generation of target shooting guns that are perfectly adapted for hunting.

Semi-automatic Shotguns

Maxus Premium Grade 3

New

MAXUS™

Maxus

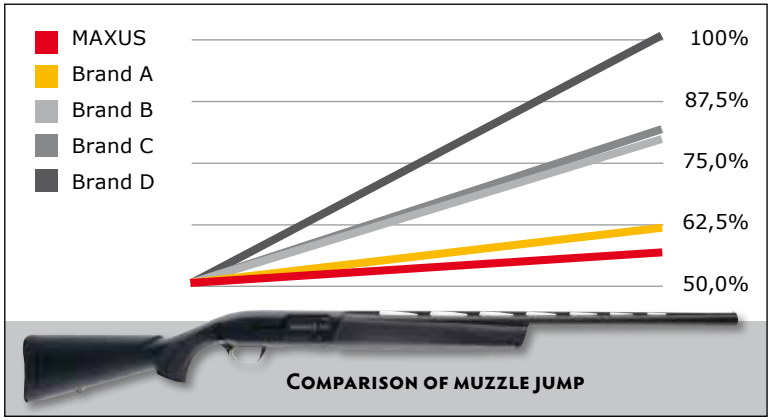
The most reliable design, construction, and performance!

The new Maxus from Browning is the most anticipated semi-automatic shotgun in decades.

Several highly innovative technologies combine to make the Maxus deliver up to 18% less recoil sensation, 44% less muzzle jump for more accurate follow-up shots, and a firing system that is 24% faster than the nearest competitor.

A new Back Bored Vector Pro barrel assembly has been developed specially for the Maxus.

Add in other benefits, such as the new Speed Lock Forearm with express locking mechanism and Turnkey Magazine Plug, and the Browning Maxus becomes the finest, most reliable semi-automatic shotgun ever made.



Maxus Premium Grade 3

The Maxus Premium is the new top of the-line model in the Maxus family. Its elegant brushed nickeled receiver is decorated with a fine animal engraving enhanced with gilded birds. The select grade 3 walnut of the stock and forearm have oil-rubbed finish.

Gauge	12M

Semi-automatic Shotguns

MAXUS™

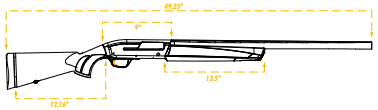
The softest shooting semi-automatic ever:

While no recoil reduction system on a shotgun can escape the laws of physics, the Maxus is sure to change your mind about recoil control. The Power Drive Gas System, Inflex technology, Vector Pro Back Bored technology, from Browning are combined to reduce the total recoil force to the shooter by 18% compared to any other semi-automatic shotgun on the market.

INFLEX TECHNOLOGY



LIGHTNING TRIGGER

SPEED LOAD PLUS

1 Inflex Technology

The recoil pad with Inflex technology is the most effective recoil pad of all semi-automatic shotguns.

Much more than a recoil pad in a recoil-absorbing material, it has been designed with an internal structure that lowers the buttstock and pushes it away from the shooter's face after each discharge, which allows a second shot that is even more comfortable and faster.

2 Optimal Dimensions

Innovation in the Maxus is racing ahead and you can see this in the fitting and handling. The new Maxus has an extended forearm and a pistol grip with a small radius to maximise control.

A light tube magazine in steel reduces weight and thus allows a faster swing while maintaining durability. The drop and the cast can be adjusted by using a set of buttstock spacers.

3 Trigger System

The new design of the Lightning trigger system is the best ever offered for a semi-automatic shotgun. It is designed to offer a smooth, crisp feel with a minimum of travel.

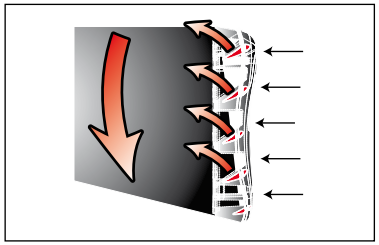
With a mean firing time of 0.0052 seconds, the Lightning trigger system is 24% faster than the nearest competing semi-automatic, making each pull perfect. Also, it is easy to remove for cleaning.

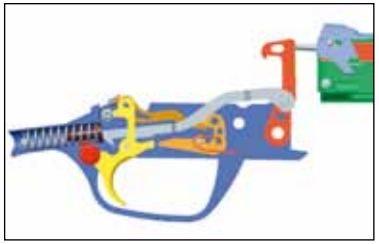
4 Speed Load Plus & Cut off

Speed Loading has been very popular on Browning autoloaders for decades. Browning's new patented loading system sends the first shell directly to the chamber from the magazine. And now, unloading is just as simple with the new Maxus.

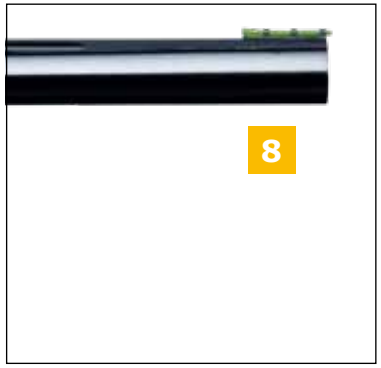
The fast unloading function quickly and easily clears the tube magazine, without any need to individually chamber shells.

The Maxus is equipped with a cut off for the magazine to allow the shooter to unload the chamber easily, and thus change the type of shell without having to chamber a shell from the magazine.





MAXUS



VECTORPRO™

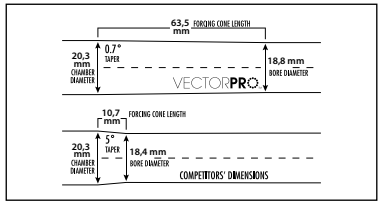
POWER DRIVE GAS SYSTEM

SPEED LOCK FOREARM

INVECTOR PLUS+

5 VectorPro & Back-Bored

The new geometry of the extended VectorPro forcing cone together with the back-bored barrel eliminates the deformation of shot, making it possible to improve the shot pattern and reduce recoil sensation.



Flat Rib

A new flat sighting rib is aligned with the top of the receiver.

6 Power Drive Gas System

The new Power Drive Gas System uses larger escape valves to remove gas more quickly with heavy loads.

A brand new patented design for an integrated valve keeps residue outside the mechanism for cleaner functioning.

The piston has a run increased in length by 20% to make it even more reliable with light charges. The system works with charges from 24 to 64 g.

7 Speed Lock Forearm

The awkward screw knob mechanism on the forearm has been replaced by a forearm with the Speed Lock system. This secure system for setting the forearm makes disassembly of the shotgun for cleaning and storage easier and faster, and lets you attach or detach a strap with one simple press.

The patented Turnkey magazine plug system is easily disassembled with a car key.

8 Invector-Plus™ Choke System

The Invector Plus interchangeable choke functions jointly with the Vector Pro and the back-bored barrel to offer dense and regular shot patterns.

The longer tapering cone inside an Invector Plus choke produces regular shot patterns with more uniform densities, and therefore fewer scattered pellets.

Semi-automatic Shotguns

Fusion Evolve Elegance

Fusion Evolve

Effective in all circumstances.

The Fusion Evolve range is distinguished by its innovative characteristics, such as the Speed Loading system or the very reliable Active Valve System.

As with all Browning semi-automatics, you can shoot all shells with high performance steel shot, from standard to magnum.

Phoenix Hunter 20M

The Phoenix Hunter 20 gauge keeps all its promises by offering you a semi-automatic shotgun chambered for 20 Magnum gauge that is light, functions perfectly, and has a reasonable price.

Phoenix Topcote 12M

The Phoenix "Top Cote" is an improved version of the Phoenix with a special luxury treatment of the wood which also offers better resistance to humidity.

The receiver also has a special black coating.

Gauge	12 M
Chamber	76 mm
Barrel	66 - 71 - 76 cm
Chokes	4 Invector+ (1/4 - 1/2 -3/4 - Full)
Rib	6 mm
Buttstock	pistol

La Gamme Phoenix

The Phoenix gives you access to Browning quality at the best prices.

The Back-Bore barrel, equipped with removable Invector+ chokes, proofed for high performance steel shot, and the exclusive Active Valve System make this gun one to shoot in all conditions.

The Phoenix is one of the best value and quality shotguns available today.

The lightness of the Phoenix Hunter 20M makes it the ideal gun for woodcock hunters.

Phoenix Topcote 12M

Legia

Hunting cartridges

For a century, hunters have trusted completely in Legia shells, which have been faithful companions on the terrain of their passion.

The newest line has integrated the latest technical developments while still respecting the heritage of this line of legendary shells, which are sought out by hunters for whom every discharge of a shotgun must be a "master shot".

Légia Hunting

The Legia Hunting in its Burgundy holder with a 67 mm case and 32 g load hardened lead shot is the ideal shell for upland hunting and for small game hunting with all types of shotguns at short and medium distances.

Available in no. 6, 7 and 8 shot, you will appreciate the smoothness and regularity of the shot patterns for hunting doves, pigeons, or pheasants.

Code	CBLC132P
Gauge	12
Tube	67
Head	16
Load	32
Shot	6 7
Speed in m/s	395

Légia field

With its 22 mm head and 34 g of hardened shot in a 70 mm case, the Legia Field is the "all terrain" cartridge for driven hunts of partridge or pheasant.

It will also be your ideal partner for hunting hares.

Code	CBFI34P
Gauge	12
Tube	70
Head	22
Load	34
Shot	5 6 7
Speed in m/s	400

Légia high speed

The Legia High Speed is the specialist cartridge for long-distance shooting of fast game with dense plumage, such as pigeons.

In fact, its high speed and heavy load of 36 g with perfectly adapted shot (4-5-6) make it a powerful and effective shell.

Its red case with a 22 mm head that ensures excellent holding in the chamber are the distinctive signs of this "high performance" shell.

Code	CBHSR36P
Gauge	12
Tube	70

MAXUS Camo Duck Blind

MAXUS

	MAXUS Camo Duck Blind	MAXUS Composite
	The model par excellence for waterfowlers. This shotgun is covered in the famous Mossy Oak Duck Blind camouflage, which is the most effective camouflage for waterfowl. It is chambered in super magnum to allow you to shoot Steel shot shells of 70 mm to 89 mm.	Designed for the most extreme hunts, the Maxus Composite is a real tool that meets all challenges. For the buttstock and forearm of this shotgun, we have developed a special anti-slip surface to ensure you a good grip on your gun in all weather conditions.

Phoenix Composite 12M 3.5”

phoenix

	Phoenix Composite 12M 3.5"	Phoenix Camo Mobu 12M 3.5"	Phoenix Special Canard 12M 3.5"	B425 Waterfowl 12M 3.5"
	The composite buttstock and forearm of this model make an ultra-robust gun that can go anywhere. With its Back Bored barrel chambered for 89 mm (3.5”), you can shoot all types of shells, from light loads of 32 g to heavy loads of 63 g, most notably allowing the shooting of geese.	The Phoenix Camo stands out due to its very singular "full camo" look, but it is extremely effective as stealth and camouflage are essential elements for success in your hunting. Ideal for waterfowlers or pigeon hunters.	The Phoenix Special Canard is the semi-automatic shotgun for waterfowl specialists that is accessible to all. It has the technical characteristics of the Phoenix. But thanks to its 3 1/2”chamber, it can fire super magnum 89 mm shells. The receiver of this special model is coated in black for greater stealth, and decorated with a silver duck.	Designed for intense use in natural aquatic environments, the Waterfowl will accompany you without getting damaged when you go hunting duck and geese. Its buttstock is protected by a satin varnish. Also, it is chambered for 3.5’’ shells and its barrel can handle large loads and Steel shot without a problem. The 62 mm "Invectors Plus" ensure the finest ballistic performance.

Semi-automatic Rifles

Bar Zenith Ultimate

Bar

The best-selling semi-automatic rifle in the world.

Does the BAR, whose full name is the Browning Automatic Rifle, need to be introduced again?

The BAR created a new class of guns, semi-automatic rifles for big game hunting.

Since its creation in 1966 by one Bruce Browning, grandson of John Moses Browning, showing that good genes live on, the success of the BAR has never been denied.

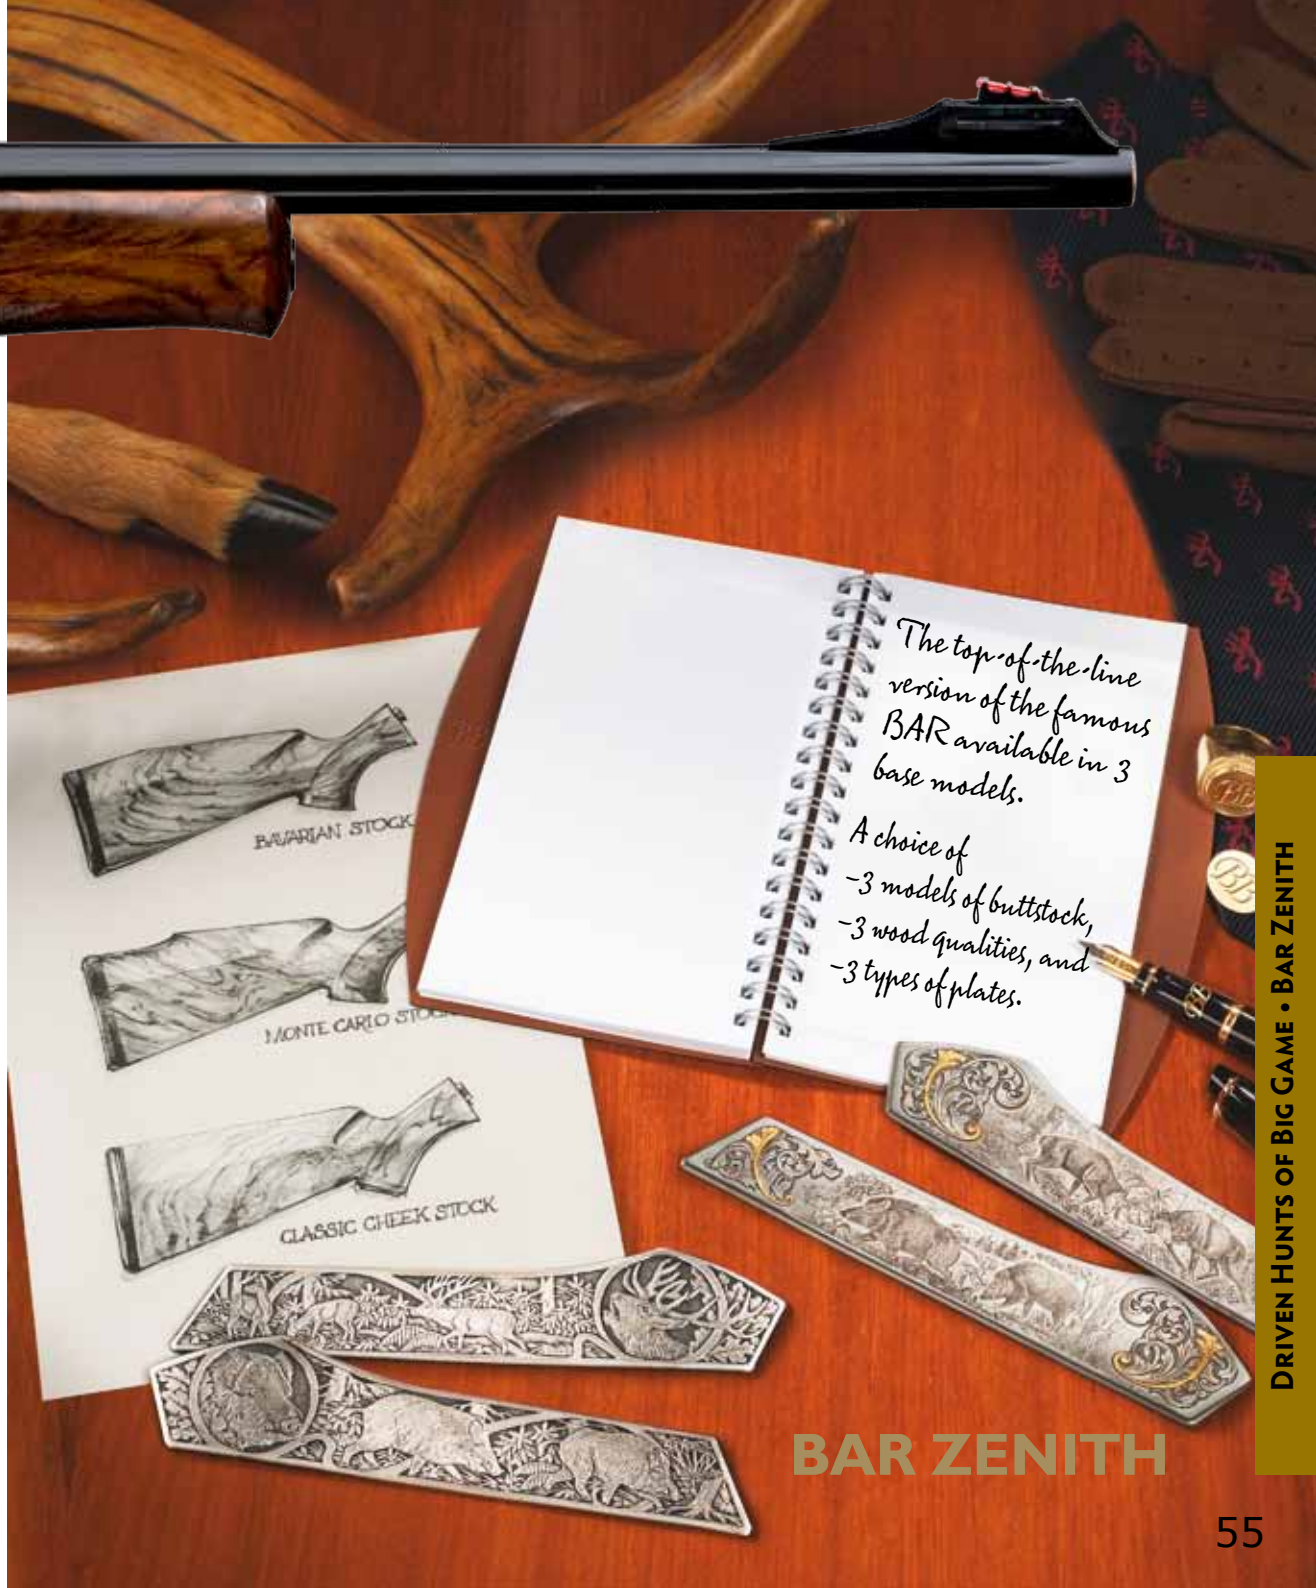
With more than one million units sold in 44 years, the BAR is the undisputed leader, the benchmark for semi-automatic rifles.

This title is the result of the quality of its mechanism, to the smoothness of its functioning of its gas system that reduces recoil sensation to a minimum, to its reliability, and above all to the fact that it is constantly evolving to offer continually better performances.

Over the seasons, the BAR has once again been improved. It benefits from mechanical and aesthetic modifications to remain the best rifle in its class.

Today there are twelve models, offered in twelve different calibres.

Whether you choose a Zenith, a ShortTrac, a LongTrac, or a classic BAR with a receiver made of steel or a lightweight alloy, you will benefit from four decades of know-how, shooting, and excellence.



The top-of-the-line version of the famous BAR available in 3 base models.
A choice of
-3 models of buttstock,
-3 wood qualities, and
-3 types of plates.

BAR ZENITH Prestige Wood

	BAR ZENITH Prestige Wood	**BAR ZENITH** Ultimate	**BAR ZENITH** Prestige Big Game
	The Prestige version comprises two models: Wood and Big Game, both fitted with a Bavarian buttstock and a tulip forearm made from Grade 3 walnut. The BAR Zenith Wood is distinguished by wooden plates integrated into both sides of the receiver, while the BAR Zenith Big Game possesses engraved plates.	This is the supreme model of the Zenith family, endowed with magnificent engraving entirely retouched by hand and enhanced with gold inlays showing wild boar on the left side and stags fighting on the other. A series of options is available for personalising your gun according to your wishes.	The BAR Zenith Big Game possesses engraved plates. Every BAR Zenith can also be customized to suit your preferences thanks to the numerous options on offer.

The top-of-the-line semi-automatic rifle, the BAR Zenith is the very latest development of the very famous BAR rifle. The master values of this Zenith family are style, refinement, and elegance, as well as the pleasure of using a custom gun.

Indeed, the major asset of the BAR Zenith is that it gives you the possibility of customising your gun thanks to an array of available options with different plates integrated into the receiver, but above all, several types of buttstocks and forearms.

BAR SHORTTRAC LONGTRAC Eclipse Gold

New

ShortTrac/LongTrac

	BAR SHORTTRAC - LONGTRAC Eclipse Gold	BAR SHORTTRAC - LONGTRAC Luxe	BAR SHORTTRAC - LONGTRAC Eclipse Gold Left Handed	BAR SHORTTRAC - LONGTRAC Elite Left Handed
	Refinement and elegance are the two characteristics of this new BAR Eclipse Gold. It has a nickeled receiver with two brushed side faces that show off a new engraving of a hunting scene accented by a touch of gold.	The refined BAR Luxe plays the elegance card with its ultra-realistic hand-finished animal engraving. For this high-end model, the most beautiful walnut has been selected to produce this superb stock with its slight hogback, Bavarian cheek piece, and tulip forearm. The BAR Luxe is delivered in an Opaline case specially designed for it.	This is a carbon copy of the new Eclipse Gold, retaining all of its features, but adapted to left-handed shooters. Thus, the ejection window and safety are reversed to create the only semi-automatic rifle in a complete left-handed version.	The thousands upon thousands of left-handed hunters using an unsuitable rifle finally have an answer to their needs, and the problems of ejected cartridges passing in front of their eyes or burning their arms are now part of the past.

ShortTrac/LongTrac

	Bar ShortTrac - LongTrac Hunter		Bar ShortTrac - LongTrac Camo	Bar ShortTrac - LongTrac Composite
	It's the new standard bearer for the ShortTrac - LongTrac line. It is elegant, beautiful, and more ergonomic. Its receiver carries a restrained and refined engraving, enhanced by a golden Buck Mark on an old-silver nickel plating.	The Bavarian buttstock with its tulip forearm produces excellent handling, and thus a great efficiency of use. The balance of this gun, guaranteeing great joy, has been upgraded by using new, completely adjustable aluminium sighting equipment.	Entirely covered in Mossy Oak® Break Up™ camouflage, this camo version perfectly blends in with vegetation and is the ideal partner for your camouflage clothing. It gives you greater efficiency for hunting big game.	With its receiver and forearm made of composite materials gives this gun extreme ruggedness under all conditions. Likewise, it gives the shooters superior and comfortable handling and grip.

Semi-automatic Rifles

BROWNING MAKES THE DIFFERENCE.

An undisputed leader with 44 years' experience, Browning is the specialist in semi-automatic rifles.

In 1966 Browning launched the BAR (Browning Automatic Rifle) and it quickly became THE market benchmark. Despite stiff competition, the BAR became the unquestionable leader in Europe for semi-automatic rifles.

To date, more than one million BARs have been sold.

In 2002, Browning, in collaboration with Winchester, developed the WSM (Winchester Short Magnum) calibres that bring together the power and accuracy of the classic magnum calibres and place them in a smaller cartridge.

In 2003, Browning introduced the ShortTrac, which is the first semi-automatic rifle on the market specifically developed for WSM calibres.

The smaller size of the cartridge allowed the creation of a light, compact gun with the guarantee of "Magnum" performance.

All of the experience acquired by our research and development services on the BAR over the last 44 years is found integrated into the ShortTrac for your great satisfaction.

1 THE MOST RELIABLE RIFLE ON THE MARKET; 44 YEARS OF EXPERIENCE

The Barrel chamber is chrome plated to avoid the formation of rust with usage, but especially to facilitate the extraction of used cartridges and thus ensure perfect operation, cartridge after cartridge.

The gas cylinder is also chromed to avoid rust, but above all to allow piston movement in spite of the combustion gas.

The exclusive Browning gas-operated system is adjustable, thereby enabling you to adapt the gun to the types of ammunition used. This operation must be performed by your Browning gunsmith.

An ingenious breech-damping system, located in the housing, considerably reduces wear and stress on the internal mechanical parts.

2 EXCELLENT ACCURACY

The barrel of each BAR rifle is created by cold hammering at the Fabrique Nationale in Herstal, Belgium.

The barrel/bolt locking mechanism works directly in the barrel, due to a lock of seven lugs that engage in an extremely rigid manner.

This system provides excellent shooting accuracy, as well as the possibility of firing magnum cartridges.

The barrel is "breeched" into the receiver, which guarantees great rigidity in the barrel-frame assembly. This is the essential element for great accuracy.

3 VERY HIGH QUALITY FINISH AND ASSEMBLY

During its assembly, each BAR rifle is subjected to extreme care so that each component is perfectly fitted, and assures you unfailing reliability and pleasure of use.

4 Exclusive Browning BOSS™

(Ballistic Optimizing Shooting System): improvement of accuracy.

The BOSS™ system has two main advantages: it improves the accuracy of the rifle and considerably reduces its recoil.

Improvement of accuracy: the BOSS™ system allows the bullet to leave the barrel at the ideal moment, i.e., at the "peak" or "valley" of the vibration wave when the muzzle is virtually motionless. Ten positions are indicated on each Barrel equipped with BOSS™, and a table of average settings is supplied for each calibre, which permits rapid adjustment of the rifle to the desired ammunition.

Recoil reduction: air vents located all around the circumference of the BOSS™ system serve as a muzzle brake by diverting the combustion gas. The result is a recoil reduction of around 30-50% depending on the calibre and, therefore, excellent shooting comfort.

5 Reversible safety for left-handed shooters

Every BAR ShortTrac, LongTrac, or Zenith rifle has a reversible safety located behind the trigger shoe that can be adapted for left-handed shooters. This operation must be performed by a gunsmith.

Adjustable buttstock: the BAR ShortTrac and LongTrac, as well as the BAR Zenith, are fitted with 5 inserts that allow you to adapt the drops and cast of the buttstock to your body.

6 Adjustable buttstock length

Certain BAR ShortTracs and LongTracs are equipped with an interchangeable pad that enables you to adjust the length of your gun to suit your body.

There are three pads of different thicknesses (1.3 cm - 2.0 cm - 2.5 cm). The orginal firearm is delivered with the intermediate 2.0 cm thick pad.

7 Innovative design

The ergonomic magazine cut-off allows effortless access to the hinged magazine (90°), thus allowing for easier loading and unloading of cartridges.

Silent loading: the red dot seen on the receiver behind the arming lever acts as a locking indicator for increased reliability. Thus you can load your gun in silence, in all certainty that it is locked properly.

Drop-down magazine kit

For countries where permitted by law, a removable drop-down magazine with a 6-shot capacity is available as an accessory only in the 30-06 calibre.

8 Adapability of buttstocks

Completely interchangable, different types of buttstocks and forearms are available as separate parts and can be installed on your ShortTrac/LongTrac.

Bar ShortTrac

Notes	set of 6 convergence adjustment rings	set of 6 convergence adjustment rings

The CCS 525 Elite presents a rich, deep, hand-retouched engraving on a steel action frame. The Grade 3 walnut buttstock has also been reworked to give it a more traditional and finer design. Aesthetics and handling join with the technical qualities of this double express rifle to make an ideal battue gun.

The weight and balance of this gun are perfect for today's hunting conditions.

The action frame of "Aircraft" quality light alloy is strengthened by high-strength steel inserts.

Each detail of this rifle is the result of very specific attention:

- a hogsback buttstock with Bavarian cheek piece,
- a tulip forearm accents its elegance,
- a classic battue rib allowing for the installation of a sighting scope,
- an engraving of animal subjects enhances this rifle.

Browning reinvents the Double Express rifle

The barrel assembly, the essential part of this gun, is both classical and innovative. A spacer ring placed on the upper barrel ensures the precision of the vertical convergence of the barrels, while the lateral convergence is ensured by the design of the barrel itself, which incorporates a unique "cradle" strip.

When the choice of ammunition has been made, a spacer ring is recommended and placed securely under the front sight of the upper barrel, thus guaranteeing unequalled accuracy (*).

(*) This operation must be performed by your gunsmith

CCS 525

System of adjustment rings

Exclusive barrel convergence adjustment system: cannot be altered but can be adapted to different types of ammunition.

Thanks to this system, the Double Express CCS525 rifles are originally set to 60m by the Liège Test Bench and the two impacts must be within a 5cm square.

Functioning of the system

Whatever the diameter of the adjustment ring installed in the muzzle of the gun, the barrel convergence angle maintains a natural pressure and, thus, permanent contact between the muzzle of the upper barrel and the barrel spacer wedge.

As this wedge is itself silver-brazed on the lower barrel, the position of the muzzle of the upper barrel is perfectly maintained on the axis of the muzzle of the lower barrel.

The ammunition used is Winchester Partition 12.96g and 18.53g for the 8 x 57 JRS and 9.3 x 74 R calibres, respectively.

For the 30R Blaser, Blaser CDP 10.7g ammunition is used. If you would like to use a different ammunition, you must adapt your gun using one of the 6 adjustment rings delivered with your rifle.

Bolt-action Rifles - Lever-action Rifles

X-Bolt Battue
with sighting system

	X-Bolt Hunter with sighting system This version is characterised by the battue rib type sighting system and optic fibre front sight allowing for rapid firing without a scope at short distances. This is ideal for driven hunts and is very versatile in use. Moreover, a "hide" type rear sight is delivered with your gun. The very modern designed and perfectly ergonomic forearm of the X-Bolt is made of walnut.	**BLR** Light Weight Here is the classic version of the BLR. This lever-action gun is at home everywhere. On rifle ranges, in the hide, or when tracking where its lever action plays a reassuring role as you cross difficult terrain with the gun slung or on your shoulder.	**BLR** Light Weight Battue The BLR is the only lever-action rifle developed in magnum calibre. Its mechanics are impeccable and characterised by the exceptional smoothness of its operation. It has a removable magazine and a highquality barrel and is ready for fitting a scope. Its battue rib along with a short barrel makes an excellent weapon for driven hunts and tracking.	**BLR** Light Weight Take Down The BLR now exists in a Take Down version, i.e., it can be dismantled, for example, to facilitate its transport on hunting trips. No tools are required for dismantling, which is a quick and easy operation that never affects the accuracy of your gun.

X-Bolt Hunter Elite

X-Bolt

The new benchmark for bolt-action rifles.

The new Browning appeared like a revolution in the bolt-action rifle universe.

The X-Bolt was built on the foundations of the success of previous Browning rifles, carrying numerous innovations that will without doubt make it one of the best rifles on the market.

The most remarkable innovation is the adjustable three-lever Feather Trigger™ system that gives this rifle a firing sensation of unequalled quality.

A new bolt unlock button allows the bolt to be opened with the safety on to unload the gun. Its new design features a more compact size and better balance, making it very functional.

Finally, to ensure the stability of the sighting, scope bases are now attached to the receiver using four screws per base.

Innovation is a tradition at Browning, and the X-Bolt is one of the latest examples.

X-Bolt Hunter Elite

It is modern and captivating, with a buttstock fashioned from a beautiful block of walnut and then oil finished.

The end of the pistol grip as well as the forearm have a rosewood insert.

It comes with a battue rib mounted in the factory, as well as a rear sight that can easily be mounted in its place without needing to modify the adjustment of the gun.

Bolt-action Rifles

X-BOLT

The new Browning appeared like a revolution in the bolt-action rifle universe.

The X-Bolt was built on the foundations of the success of previous Browning rifles, carrying numerous innovations that will without doubt make it one of the best rifles on the market.

The most remarkable innovation is the adjustable three-lever Feather Trigger™ system that gives this rifle a firing sensation of unequalled quality.

A new bolt unlock button allows the bolt to be opened with the safety on for unloading.

Its new design features a more compact size and better balance, making it very functional.

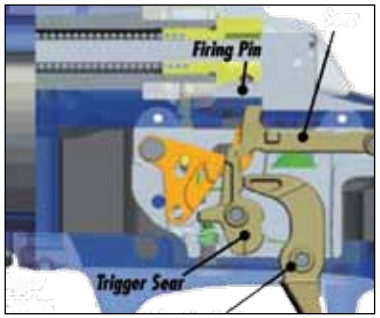
Finally, to ensure the stability of the sighting, scope bases are now attached to the receiver using four screws per base.

Innovation is a tradition at Browning, and the X-Bolt is one of the latest examples.

1 Feather Trigger

To get an accurate shot overland, on the hunt, or at a shooting range it is essential to have a good trigger.

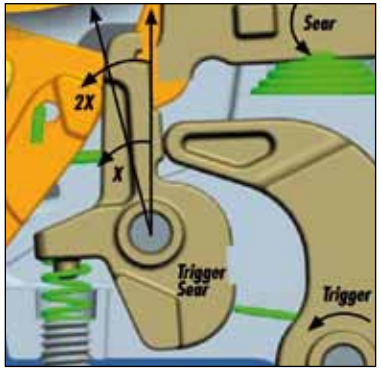
The new adjustable three-lever Feather Trigger™ system of the X-Bolt allows a rapid and clean action from the trigger show, with perfect accuracy and no overtravel.



The trigger is also adjustable from 1.6 to 2.3 kilograms with an adjustment screw, and is pre-set at 1.7 kilograms at the factory.

The alloy trigger housing contains chrome-plated steel components that are perfectly polished on all important contact surfaces, ensuring perfect functioning of the entire unit.

Precise engagement angles mean that the Feather Trigger™ remains light and perfectly adjusted, even after firing thousands of cartridges.



2 An extremely accurate barrel

A free-floating barrel is essential for utmost accuracy.

The X-Bolt's free-floating barrel is perfect due to double bedding i.e. positioning of the barrel/breech block assembly at two points with respect to the forearm, at the front and at the rear.

Another important point is that the perfectly designed target crown is slightly recessed, which provides protection of the ends of the barrel rifling from possible damage.
The barrels are systematically inspected at 3 points to verify their interior finish their straightness. They are passed under a pneumatic micrometer to check their uniformity.

3 Opening the bolt

The bolt-unlocking button works in conjunction with the safety to provide an added degree of safety. Conveniently located on top of the bolt lever, the bolt-unlocking button allows you to open the bolt while the safety is on. You can thus check the chamber or unload your X-Bolt in perfect safety.

Finally, for additional security, the safety blocks not only the trigger shoe and the firing pin, but the trigger sear as well.

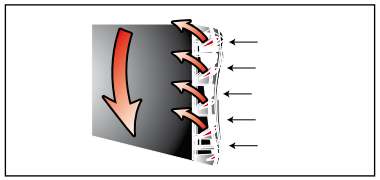
The short 60° bolt lift allows you to work and open the bolt quickly without the scope getting impeding on the trajectory.

4 Inflex anti-recoil pad

A completely new Inflex Technology anti-recoil pad is standard on every X-Bolt rifle.

This extra-soft pad offers the best recoil absorption possible on a rifle.

The exclusive design and material used promote a downward deviation of the direction of the recoil forces, thus pulling the buttstock slightly away from your face in order to reduce the recoil and upward motion of the gun.



5 Exclusive drop-down magazine

An all-new detachable rotary magazine is perfectly integrated into the X-Bolt design.

Made of light and extremely durable polymer, this drop-down magazine is designed so that each cartridge is directly in-line with the bolt and the chamber is precisely on the axis.

The cartridges are therefore chambered faster and easier without damaging the tips, as is the case with traditional magazines. An ergonomic release placed directly on the magazine allows it to drop directly downward and into your hand.

6 X-Lock™ scope mounting system

Securely mounted optics are essential to achieve outstanding accuracy.

To ensure that the new X-Bolt has the most stable scope mount possible, the X-Lock system introduces a new design with four screws per base, replacing the traditional two-screw system. The benefits are obvious: the bases are secured at all four corners rather than being held only in the centre, resulting in a more precise and stable positioning of the mounting and scope on the receiver.

Bolt-action Rifles

Eurobolt

	Eurobolt		**A-Bolt** Composite Stalker	**A-Bolt** Mountain Titanium
	The Eurobolt is provided with interchangeable sights. Thus, the gun can be modified to excel on a high seat hunt (with a rear leaf sight) or to make it formidable on a drivengame hunt (with a quarter rib). The trigger has a "stecher" (set trigger) mechanism, which allows the gun to be fired with a very light trigger pull for very accurate shots.	The Bavarian hogsback stock is always perfect for aiming with open sights or a scope. It comes with two sights: rear sight + battue rib, to be mounted according to choice.	Endowed with the features unique to the A-Bolt line, this Stalker version is extremely robust in the worst conditions as a result of its composite buttstock. In addition, it will meet your every expectation, whether for hunting or sharpshooting.	Everything was considered to make this rifle a real featherweight: 100% titanium housing, breech cover of composite materials, superlight buttstock specially developed by Bell and Carlson of a combination of composite materials and fibreglass. A Pachmayr Decelerator pad dampens of the recoil.

BAR STEEL Affut Boss™

BAR STEEL Affut Boss™

The addition of the BOSS™ system produces two particularly interesting effects: recoil reduction (in the range of 30 to 50%) and increased accuracy. The performance of the BAR is thus improved when shooting using a scope or at long distances.

BAR STEEL Affut

This version is fitted with a vertically and horizontally adjustable rear sight. The fine metal front sight ensures perfect accuracy of aim.

Thermal underwear

Transitive underwear is adapted to all the needs of hunters.

Technology

- Integration of ZrO2 (zirconium dioxide) nanoparticles in the heart of the polyester fibres.
- Infrared emitted by the skin is reflected by this high-tech material, generating a permanent sensation of warmth
- Protection against the effects of UV.
- Antimicrobial odour protection.

Passive hunting:

- Body temperature is kept 2° higher than any other techncial garment

Active hunting:

- The best breathable fibres ever woven.
- The most effective moisture-wicking process.
- The lightest material for the level of warmth.
- The most comfortable natural elasticity for easy shouldering

Hell's Canyon

Supple and ultrasilent

- Light-gathering Litepipes allow for shooting in poor light conditions

Torches

All of our torches are made with high-quality components and are assembled with the greatest care.

Starting in 2010, Browning, as well as numerous other manufacturers, will follow an identical performance standard, ANSI-FL1.

The luminosity of our torches measured in lumens is thus directly comparable among these different manufacturers.

B25 B2G Sporter

B25 B2G Sporter

A true classic, the B25 B2G is one of the most-loved models. This Sporting version is generally equipped with long 76 or 81 cm barrels, a large ventilated rib, and an intermediate front sight. All these features will help turn a 25/25 into your gun of choice.

B25 Trap Evolution 2

A genuine shooting machine, the B25 Trap has 76 cm long barrels and a 16 mm ventilated rib and is equipped with an adjustable trigger, disconnectable ejectors, a luminescent front sight and a "Decelerator" recoil pad.

Heritage Sporter 12M

B5·25

B525

The highest-performing and most reliable shotgun.

The B525 is the latest evolution of a legendary gun created by the brilliant and innovative mind of John Moses Browning in 1925: the B25, the "last word" in Over-and-Under shotguns.

This is the foundation on which the B325, B425, and, as of 2003, the B525, were created and produced.

One million copies of these three guns have been produced, a true record.

This figure attests not only to the success of the gun but, above all, to the confidence placed in Browning over-and-under guns, especially the B525, by hunters and sport shooters all over the world.

In less than seven years of existence, the B525 has become a true benchmark, the perfect embodiment of Browning's quality, know-how, and tradition.

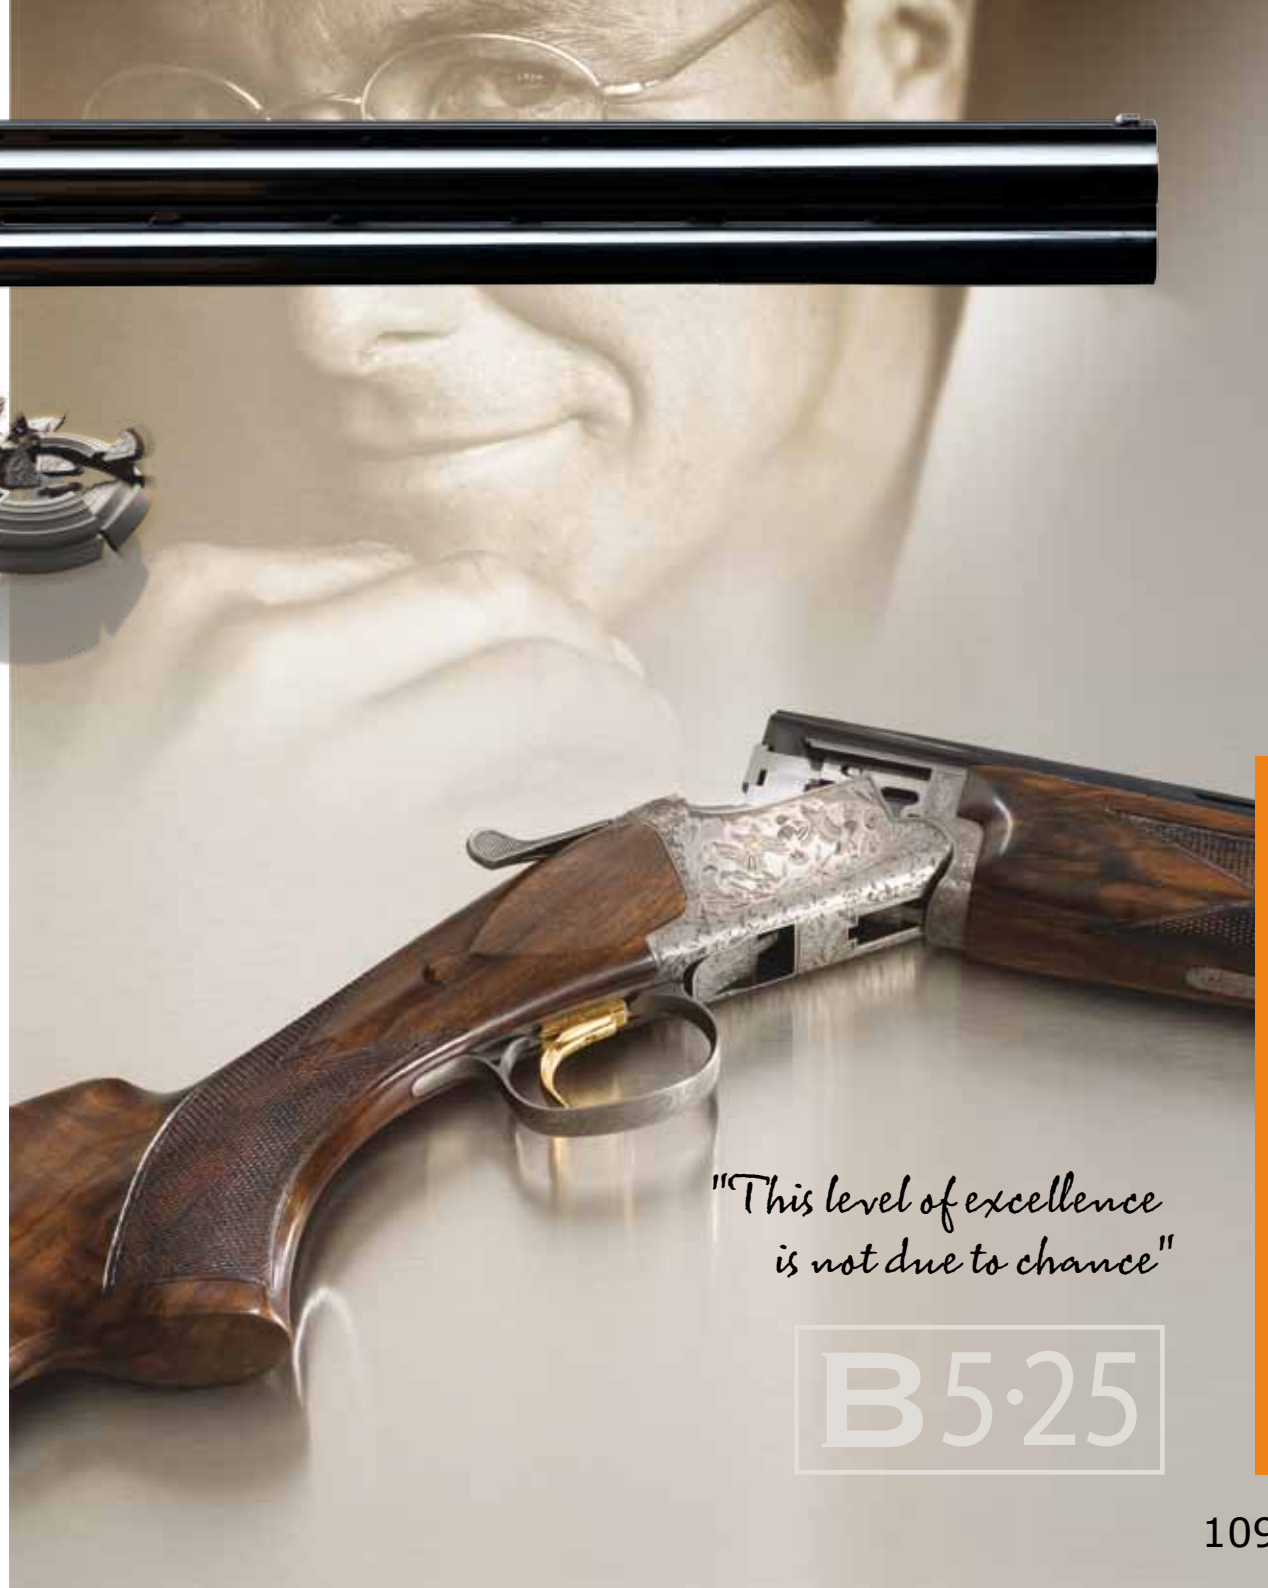
Its reliability, ruggedness, and manageability are legendary, due to the impeccable and much-envied quality of its design.

Each gun is created with special care by our skilled gunsmiths in our Miroku plant, Japan. For over thirty years, Miroku has been considered one of the highest-performing production plants in the world.

It is a place where attention to detail and rigorous production processes are the rule, almost a way of life.

Every B525 is manufactured and assembled traditionally, using red ochre, the bearing surfaces of the bolt and action frame are hand-filed and everything is checked multiple times so that neither time nor the thousands of cartridges to be fired will have the slightest effect on the gun.

At this price we are able to provide 10-year warranties for the Browning 525 action frames and guarantee that each gun is both identical to the others and at the same time unique.



Heritage Sporter 12M

The Heritage Sporter combines the performance of a modern shotgun with the elegance of a true deluxe gun. It embodies the line of the hunting model with its magnificent side plates, but with the specifications of the Sporter versions. The pistol buttstock and tulip forearm are made from beautiful, oil-finished walnut.

Sport Shooting

	B525 Sporter Prestige 12M & 20M		B525 Sporter Elite 12M		B525 Sporter 12M & 20M		B525 Sporter Premium Gold 12M
	Elegant and refined, the B525 Sporter Prestige is fitted with grade 4 oil-finished walnut, "water droplets" on each side plate, and a chequered binding. The buttstock is also equipped with a metal plate on which you can have your initials engraved. This fine inscription, performed entirely by our master engravers, covers nearly the entirety of the pieces.		Lovely grade 3 oil-finished walnut combined with a beautiful hand-retouched engraving of a hunting scene make the B525 Sporter Elite an elegant sporting gun of high performance.		The B525 Sporter is the base version of the 525 series. A grade 1 pistol buttstock and 5 Invector chokes make this an ideal sporting gun.		The Premium Gold enjoys the same specifications as the Sporter, which include grade 2.5 wood and 5 Briley chokes. However, it asserts its own identity with its black action frame decorated with golden birds.

Ultra XS Prestige 12M

Ultra XS

Technology-derived, shooting excellence.

Invector Plus Titanium chokes are produced exclusively for Browning by Briley.

Made 100% from titanium, they are highly durable and extremely lightweight, thus improving swing and balance.

The tulip forearm and the stock with adjustable comb are made from a block of grade 4 oil-finished walnut.

The modern and elegant engraving is gold inlaid.

Sam Green
Junior European Champion of Sporting Clays 2009

Ultra XS Prestige 12M

The Ultra XS Prestige is the specialist in Sporting Clays.

Equipped with a Back Bored barrel assembly, the top rib is mounted on a rounded base in order to allow for the free expansion of the barrels when their temperature is increased.

The benefit is that performance levels and the barrels' point of impact are both maintained and there is no decrease in shot patterns.

Ultra XTR Prestige 12

	Ultra XTR Prestige 12	Ultra XTR 12	Ultra XSH 12
	As its name would indicate, this Prestige version of the XTR shotgun sets itself apart with the superior quality of its wood and its 5 100%-Titanium Invector Plus. Its completely reworked engraving features silver inlay.	This model is fitted with a rubber comb that is simultaneously both smooth to the touch and non-slip. This gun strives for accuracy in aiming that can be guaranteed to the millimetre with a comfort that, until now, had never been attained. It is primarily geared toward shooters who practice their sport intensely.	Oriented toward pit shooters seeking good interdisciplinary versatility (pit, double trap, etc.) and electrocible shooting (ZZ), this ultra XSH is equipped with removable Midas chokes and 74 and 76 cm barrels.

CYNERGY Pro Sport 12M

Specially designed for Sporting clays, the Cynergy Sporter stands out for its exclusive Diamond Titanium exterior chokes, which offer unparalleled ballistic quality.

Its appearance and revolutionary design are undoubtedly a novel contribution to the world of shooting.

CYNERGY Pro Sport 20M

The Cynergy boasts a unique design that's both modern and incredibly appealing.

With its streamlined proportions, this shotgun is a true 20 gauge magnum in the body of a 28 gauge.

CYNERGY Pro Sport Ajustable 12M

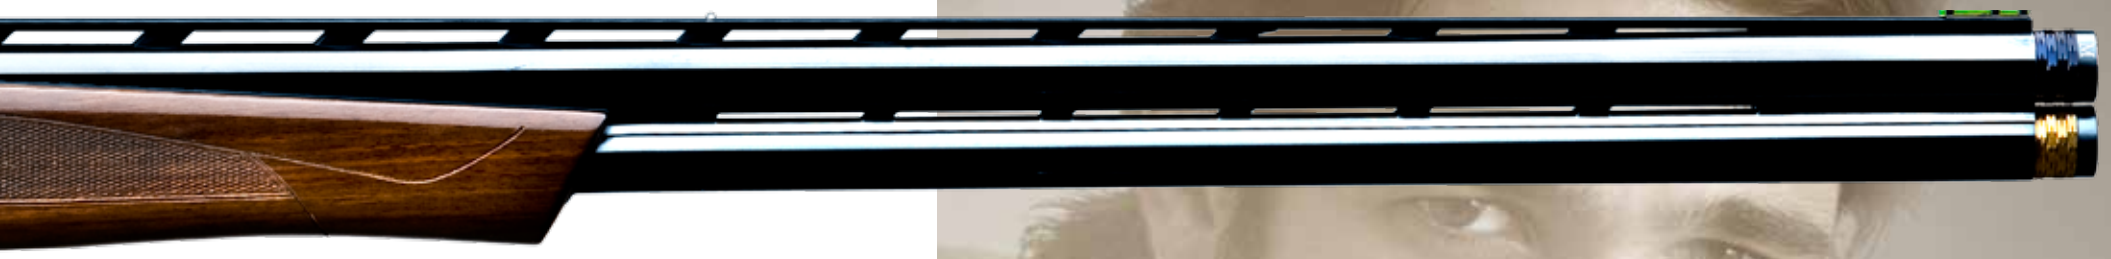
Having the same characteristics as the Pro Sport, this shotgun is equipped with an adjustable buttstock that allows you to adapt it to your body and habits.

THE CYNERGY LINE

Turn your shotgun into a natural extension of your body. Imagine an Over-and-Under that is so innovative and effective that you forget that you're even using it as you only focus on concentrating on your target. By setting these two objectives as a starting point for our project, the Cynergy was born. This shotgun, unique in its class, has come to revolutionise the very idea of an Over-and-Under shotgun, a concept created by Browning in 1925.

The Cynergy is the best shotgun of its generation and is certainly the greatest innovation in firearms since the birth of the B25 over 80 years ago. The Cynergy has 25% less recoil thanks to a special Inflex pad that guarantees you a previously unseen shooting comfort and also allows you to have a gun that fits you perfectly, thanks to three different pads of varying thickness and the included spacer.

The Cynergy is also the fastest shot on the market, 0.0019 seconds.



Cynergy Pro Sport Ajustable 12M

Cynergy Pro Sport 20M

Fundamentally, the Cynergy has the lowest action frame (60 mm), thanks to an exclusive new ultra-resistant hinge covered by a 10-year warranty.

The Cynergy also has three trigger options that can be adjusted to 3 different positions.

As with any Browning shotgun, the Cynergy has an extremely effective Back-Bored barrel capable of firing high-performance Steel shot and is also fitted with Invector "Diamond" Titanium chokes.

A new challenge for your reflexes!

cynergy

	CYNERGY Composite Black Ice 12M	CYNERGY Sporter Inflex 12M	CYNERGY Pro Trap 12	CYNERGY Pro Trap Ajustable 12
	Its futuristic style will turn heads on the shooting range. The buttstock and forearm are made of composite material with rubber inserts, increasing this gun's weight and making it more resistant. A supplementary adjustable comb that is included with the gun allows the buttstock drop and cast to be modified as you desire.	Specially designed for Sporting Clays, the Cynergy Sporter stands out for its exclusive Diamond Titanium exterior chokes, which offer unparalleled ballistic quality. Its appearance and revolutionary design are undoubtedly a novel contribution to the world of shooting. It comes equipped with an Inflex pad.	The "Pro Trap" line offers conventional buttstocks specially designed for the different Trap disciplines. Two buttstock models are available: 35-45 or 30-40 drop.	With the adjustable drop/ cast comb, you'll be able to quickly adjust the comb to your measurements. The top rib, which is mounted on a rounded base, allows the barrels to expand without constraints during intense shooting. This allows for consistent performance in terms of accuracy and points of impact.

Claymaster Shooting Glasses

- Ultra resistant polycarbonate lenses
- 99% protection against UV rays
- Interchangeable orange, yellow, transparent, smoked and blue lenses
- Fully adjustable frames comprising ratcheted adjustment, expandable temple width, and of adjustable nose pads
- Cushioned carrying case and microfibre bag included

Code	12715

Ranger Kit

Complete kit for new shooters

- Shooting glasses with dyed polycarbonate lenses altogether provide protection of the eyes and enhanced visibility of the target
- Soft foam ear plugs provide noise reduction up to 31 dB and come in a plastic storage case
- The adjustable ear protection with a padded headband provides noise reduction of 27 dB

Code	126368

Protective Earmuffs

Ultra X Electronic Ear Muffs

- Intelligent wind noise reduction system
- Refined design for easy shouldering
- Very lightweight
- Fast electronic disconnect
- Operates with two (2) AAA batteries
- Rugged carrying case
- NRR 24 dB

Code	12657
Colours	black
NRR	24 db

Midas Electronic Ear Muffs

- Sharp noises are reduced while the normal speaking voice and other sounds are amplified
- On/Off volume control
- Fast reacting time: 6 milliseconds
- Operates with two (2) AA batteries
- 100-120 hours of battery life per pair with LED charge indicator
- NRR 33 dB

Code	12627
Colours	black
NRR	33 db

Compact Noise-reducing Ear Protection

- Extremely light and comfortable
- Weight is approximately 50% less than standard noise-reducing ear protection
- May be folded in half to facilitate storage
- NRR 21 dB

Code	12631
Colours	black

Cleaning and Maintenance

Browning Legia Spray

- With our pumping system (without propellant gas, 200ml) and the adhering qualities of our oils (low volatility) the performance of the LEGIA SPRAY is 25% higher than other oils for shotguns
- LEGIA SPRAY (Red): cleaning oil for barrels and housings: excellent product for maintenance and protection
- LEGIA SPRAY (Green): cleaning oil for wooden parts

Code	12426	12427
Colours	red	green
Sizes	200 ml	200 ml

Universal Cleaning Kit

- This high-quality kit is ideal for all rifles, all shotguns, and 30 calibre and 12 gauge to 410 bore, plus 357, 40 and 45 calibre pistols
- Three heavy yellow brass cleaning rods do not damage the barrels
- This 32 pieces kit includes two cleaning brushes, five wollmops, two solid brass adaptors, two slotted ends, and 50 cleaning cloths
- A beautiful aluminium storage case for storing the contents

Code	12444
	Universal Cleaning Kit

Gun-cleaning Mat

- A means for protecting both firearms and accessories. The soft imitation felt fabric does not damage firearms and includes a Zorb Tech™ waterproof top. Zorb Tech™ keeps spills from spreading and cleansing agents from soaking through. This mat is also washable, dryable, and treated to be stain resistant

Code	12420
Colours	black
Sizes	41x137 cm

Barrel Weasel

- Cleans your barrel in 10 seconds
- Bronze wires to clean the inlays
- Cleaning surface approximately 160 times bigger than a classic wool brush
- Can be cleaned and reused
- Available in several sizes

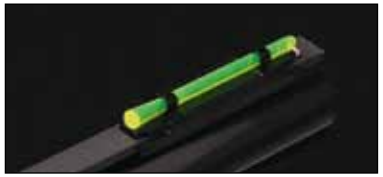
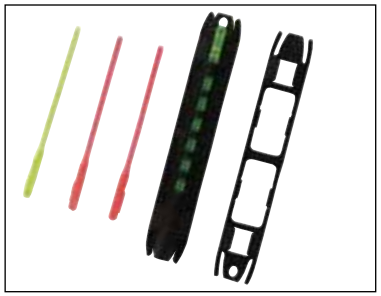
Sights





Hi-Viz® Magni-Sport Sights

- Magni-Sport consists of 5 screws, sizes 3/56, 3 X .5, 3 X .6, 5/40 and 6/48 that are suitable for most shotguns
- Hiviz® Magni-Sport sights, which use a patented technology, solve the problem of cross-eye dominance by making the sight visible solely with the shooting eye, which allows any shooter to shoot with the two eyes opened for enhanced visualisation of the target and improved hand-eye coordination
- Includes one green and one red LitePipe
- Magni-sport sights include two sizes with magnetic bases in order to adapt to the rib of most shotguns and two green LitePipes as well as two red LitePipes

Code	12854
Colours	1 green, 1 red

Code	12870
	magni sport
	magnetic sight

Hi-Viz® Bird Buster Magnetic Sights

- All Hi-Viz® Bird Buster Browning Magnetic sights are delivered with four interchangeable optical fibres of different diameters for variable brightness conditions
- Three different sizes of magnetic bases to adapt to the front sight of all shotguns
- They adapt to all Browning shotguns

Code	12859
Colours	4 Litepipe

Hi-Viz® 4-in-1 Game Sights

- The Hi-Viz 4-in-1 Game sight includes front and rear sights, which makes it perfect for deer, turkey, waterfowl, and upland hunting
- Injection-moulded optical-grade resin sight concept
- Rear sight is completely adjustable for windage and elevation
- Light-gathering Litepipes allow for shooting in poor light conditions

Code	12893
Colours	4-in-1 game sight

Hi-Viz® Comp Sights

- The metallic base adapts directly to the front sight of the shotguns for a more effective sight line.
- Interchangeable light conductors allow the shooter to adapt the diameter of the optical fibre and the colour to the shooting conditions
- Comprises eight light conductors of different colours and diameters
- Allows the shooter to know exactly where the barrel is placed in relation to the target
- Key and transport case included
- 5 screws, sizes 3/56, 3 X .5, 3 X .6, 5/40 and 6/48 that are suitable for most shotguns

Code	12850
Colours	1 white, 4 green, 3 red litepipes

Rifles

A-Bolt M1000 Eclipse

	A-Bolt M1000 Eclipse	**T-Bolt** Sporter	**T-Bolt** Sporter Composite	**Buck Mark Sporter Rifle**
	This version is specifically designed for long-distance sport shooting and as a result features two major elements: a heavy barrel promoting great accuracy and a Monte Carlo buttstock with an ergonomical grip for perfect stability.	This rifle is a "vintage", the re-issuance of a best seller, a legend. Available in .22LR, .22 Magnum, and 17 HMR calibres, it is quite close on an aesthetical point of view to its ancestor, the first T-Bolt, but the mechanics have been completely modernised. It is characterised by its straight pull bolt that loads cartridges from an exclusive 10-round rotating magazine.	This version is equipped with a buttstock made of highly-resistant ergonomic composite, allowing intense use in all conditions. Another very useful characteristic is an additional magazine integrated in the buttstock and, more particularly, in the pad. During intense shooting, it is therefore very easy to quickly replace the first empty magazine.	Non-standard by its design, compact, and tremendously accurate and reliable, this rifle offers a range of truly extensive usage possibilities. It has adjustable sighting equipment with an adjustable rear sight as well as a fibre optic front sight as well as an integrated rail for optical mounting.
Barrel	66 cm	56 cm	threaded 56 cm	50 cm

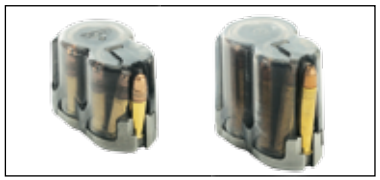
Buck Mark Rifle

T-Bolt Sporter

T-Bolt Sporter Composite

.22 17HMR



Additional magazine integrated in the buttstock for the Composite version

An additional magazine integrated in the buttstock and, more particularly, in the pad.

During intense shooting, it is therefore very easy to quickly replace the first empty magazine.

Browning recommends the use of ammunition Winchester

Rifles

SA .22 Grade 3

	SA .22 Grade 3	**SA .22**		**BL .22** Grade 2
	The Semi-Auto .22 is the biggest seller and the most often imitated. This rifle is particularly light and efficient. The barrel is dismantled in an instant. Made by the Custom Shop from original pieces, it is available in grades II and III.	A rifle that is often imitated but never equalled, continuously manufactured since 1924. • Operation in "blow back" mode (unlocked breech activated by gas); • Automatic eject, arming, and loading;	• Loading performed in the buttstock (the magazine tube is withdrawn from the back of the rifle and the cartridges are inserted one by one in the hole found in the buttstock); • bottom ejection; • barrel take-down with wear adjustment.	This jewel of the era of the pioneers, back in the Wild West, the .22 BL with its short movement action-lever (33°), external hammer, and magazine tube. It enables you to mix all types of cartridges (long, long rifles, short) with no risks of jamming.

Hand Guns

GP Silver Chrome

The GP exists in the Silver Chrome version, which is equipped with a rear sight that is adjustable in elevation and direction and a sport front sight with a rounded base plate.

The slide and the receiver are nickeled, and the rubber grip is made by Pachmayr, for sure and efficient handling.

GP MK III S

It brings together all of the qualities found in the GP, yet with an additional ambidextrous safety and lighter weight (910 g), which make it an accurate gun with practical handling. The "Pachmayr" handles ensure the best handling.

It is made with a swivel system.

Adjustable **GP** Practical

The GP Practical meets the demands of Practical Shooting. It has undergone several improvements, such as:

- Adjustable, low profile sights.
- Particularly crisp trigger pull.
- Extremely comfortable handling due to its Pachmayr chequered rubber grips.

GP 75th Anniversary Custom Shop

The Browning Custom Shop in Herstal creates deluxe and commemorative versions. All of these models are mounted in finely chequered or even sculpted oil-finished walnut handgrips.

GP Renaissance Silver (Nickeled)
Deep engraving with a stylised acanthus leaf motif. Old silver nickeled finish.

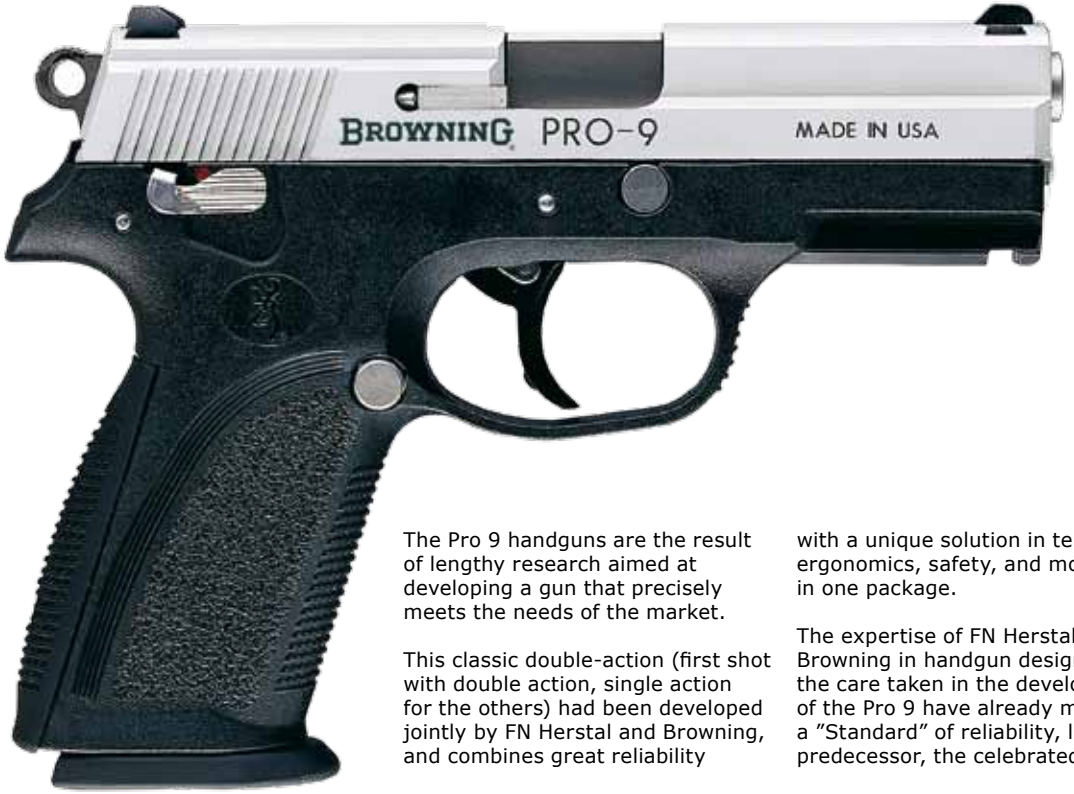
Hand Guns



The Pro 9 handguns are the result of lengthy research aimed at developing a gun that precisely meets the needs of the market.

This classic double-action (first shot with double action, single action for the others) had been developed jointly by FN Herstal and Browning, and combines great reliability with a unique solution in terms of ergonomics, safety, and modularity, in one package.

The expertise of FN Herstal and Browning in handgun design, and the care taken in the development of the Pro 9 have already made it a "Standard" of reliability, like its predecessor, the celebrated GP.

(**) DA/SA = double action for the first shot, single action for the others

The most sophisticated technologies have been implemented in this product:

The steel slide rests on a steel mechanical cradle, which is itself housed in a receiver made of synthetic material, thus combining strength, weight, and balance.

The firing mechanism is housed in an easily replaceable "firing box" that simplifies maintenance both for you and for your gunsmith.
A medium-sized handgun, the ergonomics of the grip are adaptable to the hand of each user.

Safety has not been forgotten; the Pro 9 is equipped with the most modern systems:

Firing-pin safety to avoid the gun accidentally firing in any situation where the trigger is not pulled;
A safety lever to make sure the gun is, on the one hand, safe and on the other to deactivate the hammer with or without a cartridge in the chamber.

BROWNING recommends the use of ammunition WINCHESTER

They are fitted with a rail to allow a large range of accessories, such as torches, laser designators, etc.

.22 Hand Guns

Buck Mark Field

Browning Buck Mark rimfire pistols are very much prized due to their quality, reliability, and accuracy, and numerous models are available.

Operation
The "Blowback" operation principle of the Buck Mark pistols allows for a simpler and more reliable operation.

Slide
The two reinforcements on each side of the slide offer an excellent grip. The slide catch is easily activated by either hand.

Barrel
Many models have heavy barrels for improving stability. Each chamber is hand-reamed and muzzle crowns are recessed to protect the rifling from damage that might reduce accuracy.

Rear sight
The Pro-Target™ rear sight, adjustable with 16 clicks per revolution, is mounted at the factory on all models. This sight provides a more accurate range of adjustment than the standard 12-click sights.

(**) URX : Ultragrip RX
(***) UDX : Ultragrip DX

Ultragrip RX™ and Ultragrip DX™ represent the latest technology in pistol grips

These new ergonomic grips have an ergonomic profile with the contour and texture of the chequering combining to offer you ideal handling. The hand will automatically take hold of the grip in the same place for every shot, allowing a more instinctive shot and improved accuracy. The textured surfaces are comfortable and effective under all conditions and for all ergonomic variations.

Browning recommends the use of ammunition Winchester

Front sight
Plus models are equipped with a Truglo®/Marble's® fibre optic front sight.

Trigger
Great performance compared with competitive products, the discharges of Buck Mark pistols are light, accurate, and clean.

Receiver
Although most of the .22LR pistols on the market are cast or made from sheet-metal stampings, every Buck Mark receiver is CNC-machined (Computer Numerical Control) to extreme tolerances from a block of 7075-T6 aluminium.

Pistol grip
Several varieties of wood, laminated woods, and composite materials are available. The ambidextrous rubber Ultragrip RX™ (URX) and wood Ultragrip Deluxe™ (UDX) offer a perfectly ergonomic hold.

Magazine
The body of the magazine is heat-treated for long-term loading reliability. Its coil spring provides a much more regular and stable feed than the usual Z spring. Capacity: 10 cartridges.

Drop-down magazine
Located near the trigger guard, the magazine cut-off offers very practical operation.

Safety
The wide manual safety can be set with the thumb. For greater safety, the trigger is disconnected when the magazine is removed.
