

HUNTING & SHOOTING 2011

BROWNING

EXQUISITE PASSION

Since 1897, the year when the first Browning gun was made, millions, even tens of millions, of shotguns and rifles for hunting or target shooting have been created and manufactured by Browning.

The inventor of the semi-automatic shotgun, Over and Under shotgun and, semi-automatic rifle, and most recently, an Over and Under gun with the lowest action frame and fastest firing system on the market.

This has left its mark on the history of gun-making with a wide array of models, all different, but with one thing in common – their reliability and their unparalleled levels of performance. Everyday, throughout the world, Browning guns, old or new, smooth-bore or rifled, perform on the range or for hunting, providing great pleasure for their owners.

Target shooters, hunters, and collectors can find in these fascinating items a pleasure that is renewed endlessly. Among makes of weapons, just as with makes of watches or cars, there are some whose history is part of the reputation of the entire industry, for example. Browning is the best there is.

JOHN MOSES BROWNING

Innovation and invention

John Moses Browning was born on 23 January 1855, in Ogden, 35 miles north of Salt Lake City (Utah, USA), between the Great Salt Lake and the Wasatch-Cache National Forest.

Gun-making ran in the family of the young John Moses, as his father was a gunsmith who had already been responsible for a number of innovations in the field. As a young boy, he spent time in his father's workshop, and knew the name of every part of a gun before he could read.

From the age of 6, he made fishing accessories from scraps of metal which he hammered into shape on a child-sized work bench made from a wooden crate. His 19th-Century American boyhood abounds with anecdotes, all of which point towards him becoming an internationally renowned genius inventor.

It didn't take long for those who had observed his creative traits to make up their minds: at the age of just 23, Johna Moses lodged his first patent, for the "J.M. Browning Single Shot Rifle". This invention simplified the percussion mechanism, making it more durable and reliable.

Shortly before his death, his father handed over his business to John Moses. With his brother Matt, even with less than one thousand dollars in the bank and no experience of machine-tool operation, young Browning transformed the humble store into a small gun making workshop with seven employees.

The remoteness of their store, the low number of ready customers, and the lack of capital meant that the business struggled to survive until luck intervened to make the inventor's talents known to a connoisseur: a representative from Winchester.

In another state in the US, this representative had come across a gun made by the Browning brothers. Firmly convinced of the interest of their conception, he bought it from its owner and sent it to his superiors in the company's

head office. So impressed were they that the managing director of Winchester himself set out straight away on a six-day journey to what, at that time, was still the Wild West - the real Wild West, to meet the Browning brothers.

Despite his astonishment at finding two young men in their twenties in a rustic workshop, the man was perceptive enough not to be fooled by appearances and signed commercial deals with them as soon as he could. The decision was a wise one: these agreements would last for several decades.

Browning had a future. Over the years, Browning granted licenses to several manufacturers for dozens of inventions and firearms. He invented almost everything in the field of firearms. The creativity and level of perfection of his inventions were so significant that the vast majority of his technological innovations could not be improved upon or replaced for several years.

The world of firearms is like the art world: the success of creators depends on the interest of well-informed amateurs. In 1897, it was one of the directors of the Fabrique Nationale (National

Weapons Factory) at Herstal in Belgium, who noticed a 7.65 Browning pistol incorporating a new locking mechanism. He saw the appeal straight away and the NWF obtained the manufacturing license.

Thus began an uninterrupted period of collaboration between the inventor from the Great Salt Lake and the factory on the banks of the Meuse River.

Browning reached the pinnacle of its craft with the Auto-5 semi-automatic shotgun, which was a tremendous commercial success and prompted John Moses' first visit to the Herstal workshops.

But his world-wide acclaim is without doubt due to the 9 mm Hi-Power semi-automatic pistol. More than 10 million of these legendary pistols have been sold. Starting in 1907, it was adopted by most police and armed forces across the world. The fact that the generic name for this type of gun is "Browning" demonstrates the universal acclaim and recognition it has received.

Browning's success is not at all the result of chance. Like all American

pioneers of that time, he turned luck to his advantage only through an enormous amount of hard work. His strength of character and the steadfastness of his principles were out of the ordinary.

Thus it was that, towards the end of his life, when offered an honorary title by a university, he refused it for the simple reason that "he had made it a rule never to accept anything that he had not earned as a result of his own work."

In 1925, John Moses Browning put the finishing touches on the prototype of an Over and Under which would change the history of the hunting shotgun. He called it simply B25, for "Browning 1925".

He died of a heart attack while working in his office in Herstal on 26 November 1926. It was his 61st visit to Belgium.

His body was repatriated to the United States, where he was buried with full military honours. His son Val continued his collaboration with the Belgian factory without interruption.

That collaboration continues to this very day.

Browning's quality demands

THE QUALIFICATION OF NEW PRODUCTS

Before they are launched in the market, Browning firearms are subjected to several very strict tests that are specific to Browning, known as the B.A.C.O. (Browning Arms Company) tests.

We also carry out a full and complete systematic inspection of each serial gun, which consists of a wide number of controls to ensure that each gun put on the market will bear Browning's criteria of quality, performance, and reliability.

No product will be authorised if it does not fully satisfy the following demands.

1 TESTS OF FUNCTIONING AND ENDURANCE

Highly demanding tests are carried out both for shotguns and for rifles, and have the purpose of verifying the correct functioning of the guns, regardless of the types of cartridges or shells used.

Thousands of cartridges are fired to test the reliability of the guns, no broken parts are tolerated during this test, and excessively worn parts are also unacceptable.

If any of these faults are found, there is a systematic return to the Research and Development department.

2 TESTS IN EXTREME CONDITIONS

During the development of a new product, this test has the purpose of testing the guns in the worst climatic conditions, with polar cold of -30°C or very hot temperatures of up to $+50^{\circ}\text{C}$.

The gun must function perfectly at these temperatures with a wide range of cartridges.

You can therefore use our guns in the most difficult conditions, in all circumstances, and with total confidence.

3 "TORTURE TESTS"

During the development of a new product, it is subjected to several tests, greatly superior to the C.I.P. norms in force, which are known as "torture tests".

The firearms are subjected to overload and obstruction tests to ensure the solidity and reliability of our guns.

We also perform safety tests, consisting of a series of drop tests on all its sides to verify the reliability of its safety.

The legendary solidity and reliability of Browning firearms are largely due to their successful passing of all these tests.

4 GUN CHECKS

During production, each gun is subjected to several visual checks as well as numerous measurements of its dimensions. All guns must meet the specifications in all points.

5 GUN TESTS

100% of the weapons produced are fired to confirm their accuracy and proper functioning.

6 ACCURACY TESTS

We verify the precision of each gun that leaves our production workshops.

For shotguns, we check the quality of the shot patterns as well as the correct convergence of the barrels at 35 metres.

For rifles, we verify the accuracy and grouping of each weapon.

**INVECTOR
PLUS+**

BACK BORED & INVECTOR +

BROWNING OFFERS YOU "THE BEST THERE IS!"

Browning lets you into the secret of its professional shooters: Invector Plus Back Bored barrels.

Our barrels' high performance is the result of the combination of two characteristics that are specific to Browning Back Bored barrels and Invector Plus chokes.

A. BACK BORED BARRELS

The principle of the Back Bored barrel is to increase the diameter of the barrel's bore by a standard value, from 18.4 to 18.85 mm.

Increasing the barrel bore diameter offers three benefits:

1. INCREASED SPEED AND PENETRATION

Thanks to the "Back Bored" technology there is less friction between the shot load and the walls of the barrel. Instead of needing to overcome friction, powder combustion gasses can devote more energy to propelling the cartridge wad, which results in higher load speed and greater shot penetration. This also applies to greased wads.

2. BETTER SHOT PATTERNS

With less friction on the barrel walls, the amount of shot not deformed on firing is greater, which enables it to keep its ballistic qualities. As ballistic qualities are conserved, you will obtain exceptionally regular impacts with much more shot that effectively hits your target.

3. LESS RECOIL

In a Back Bored barrel, the shot load travels through more easily and, for this reason, the shooter feels less recoil. Our Research and Development department has measured a reduction in recoil of 6%.

Browning offers a perfect balance between a shot-pattern efficiency of 80% and a perfect shot-pattern materialised by a minimum number of empty areas.

One competitor's gun alone offers good shot-pattern efficiency, but the pattern itself is much less efficient due to the numerous empty zones in the target area.

B. INVECTOR PLUS CHOKES

Adjustable Invector Plus chokes have been specially developed by our Research and Development Department for our Back Bored barrel system.

They have been designed for attaining maximum effectiveness on the basis of two criteria: obtaining "a perfect target" at different shooting distances.

1. THE PERFECT TARGET

Our objective is:

- To obtain shot pattern efficiency of 80% on target, i.e. 80% of the shot contained in the cartridge must be on target inside a diameter of 75 cm.
- A perfect shot pattern: the shot pattern must be such that there is a minimum number of "empty" areas, i.e. areas in the target surface where there are no shot impacts.

2. AT DIFFERENT SHOOTING DISTANCES

Our objective is:

- To obtain the perfect target at different shooting distances. Depending on the type of choke used, the efficient shooting distance will be different. For example, at 15 m, with an Invector Plus Cylindrical choke, we obtain target shot pattern efficiency of 80% with a minimum number of surfaces without any shot impacts.

THE INVECTOR PLUS CHOKE RECOMMENDED FOR DIFFERENT SHOOTING DISTANCES

Full Choke	= 35 m
3/4 Choke	= 30 m
1/2 Choke	= 25 m
1/4 Choke	= 20 m
Cyl	= 15 m

Depending on the Invector Plus you choose, you will obtain a perfect target depending on your shooting distance and the type of game you are hunting.

TESTS AGAINST COMPETITION

In its permanent concern for improvement, Browning regularly tests its own products by comparing them with other guns on the market.

Our tests show that the chokes on other guns provide good performances but their shot pattern is by no means perfect and therefore lead-shot tiering is not as perfect as with Browning.

With large numbers of competitors, it is difficult to find any difference between 1/2, 3/4 and Full choke performances (efficiency and shot distribution).

**test carried out with Winchester AA n°7 lead shot cartridges.*

The Browning B525 is already appreciated by more than a million hunters for its many qualities, and most especially for its unequalled sturdiness in the field. In collaboration with the brand "Magic Safari Lodges" and the hunters' travel agency "Orchape", some "small game" destinations are suggested in Argentina, Burkina Faso, Kazakhstan, Chad, and Spain. These are now "Browning Partner Lodges". Several B525 shotguns are made available to hunters at each location. This free service that offers the opportunity to hunt with a legendary shotgun will also allow you to avoid the problems and possible hazards of travelling by air with a gun.

B5·25

"Magic Safari Lodges" is the premier guide to exceptional hunting destinations specially conceived for those looking for better experiences, blending deluxe facilities with unforgettable locations. www.magicsafarilodges.com

CANARD DE SABOURNAC – France

Unique in Europe, Sabournac is a private hunting estate that has been organizing mallard shoots over the last twenty years or so on the principles of the large "English style battues". This type of hunting surprises and appeals to hunters, who like firing a few hundred cartridges on high-flying mallards. The birds fly over surprisingly high, which forces top-shooters to equip themselves with full-choke guns. The estate is open from September 1st to January 31st and may be reserved by a single group of 4 to 12 guns.

CORTIJO SOTO REAL – Spain

A unique sporting challenge awaits you at Soto Real. An authentic five-star hunting lodge set among the palm trees, bougainvillea, and orange trees of a working estate in the rolling hills of Andalusia. Driven red-legged partridges are hunted from October until March and walked-up quail from July to September.

You can truly expect a challenge above and beyond the usual at Soto Real.

CAMPMENT DE L'ÉLÉPHANT – Burkina-Faso

The walked up hunt of francolins and guinea fowl is the specialty of the Campement de l'Éléphant with equally very nice passes for turtle doves and sand grouse on specially equipped water holes.

The season runs from December to March. Hunters will find a comfortable camp (air conditioning, swimming pool) and a change of scene in the African bush.

VERACRUZ – Argentina

Veracruz Camp (host Luis Infante de San Javier, often called "the Portuguese") is the benchmark for duck hunting in Argentina. The season unwinds from February to July in the rice paddies, marshes, and islands of the Paraná River.

Turtle doves are hunted year-round with the possibility of firing more than a thousand shots per day.

KOULOUDIA – Lake Chad - Chad

The new air-conditioned Kouloudia Camp, three hours from N'Djamena, offers extraordinary hunting for teal, pintail, shovellers, and African ducks.

The season runs from November to March in the flooded areas of Lake Chad cultivated by the villagers and where the ducks come to feed.

GREAT SPANISH HUNT – Spain

Only 45 minutes from Madrid, outstanding red legged partridge shooting in Spain finds its best sample at La Flamenca and Fuensauco estates, run by Javier Corsini who is among the most respected shoot owners in Spain after his 30 years of experience. Professionalism, organization and expertise guarantee outstanding days with expected bags of between 500 & 2,000 birds as the team prefers. Surrounded by 3,000 hectares a high end shooting lodge together with his chef creations and top Spanish wines will make your experience unforgettable.

CUSTOM SHOP

An exceptional custom-made gun

Imagine a custom firearm that's uniquely yours, with intricate engraving and a beautiful finish on every component. Each piece is hand-fitted to ensure strength and reliability.

You can have one of these for yourself from the Browning Custom Shop in Liège, Belgium. A custom Browning gun is the result of time-proven designs and manufacturing, as well as customisation, that always produce a firearm that will be enjoyed for generations. Shown opposite and over the page are some of the popular engraving patterns, but you can also create a pattern that is uniquely your own.

The B25 is the last creation of the world's greatest firearms inventor, John M. Browning. Its design represents the culmination of decades of ingenuity, experience, and wisdom in firearms. It is, to this day, the finest and most respected Over and Under weapon in the world.

The feeling one receives by owning a B25 is no different to owning a piece of art by one of the great masters. The B25 is a true masterpiece. The design of the B25 reflects John Browning's knowledge of hunters.

He knew they preferred a single sighting plane and a single selective trigger. He fulfilled their desires with his unique ability to achieve perfect balance, economy of proportion and eye-appealing design.

The B25 has been made in its totality in Belgium since 1931.

The Custom Gun Shop of the National Factory at Herstal can carry out practically any customisation work you might desire.

These firearms will be entirely assembled, adjusted, and engraved in Belgium according to the personal specifications of our clients.

How To Order

All orders for products from the Custom Gun Shop must be sent to your Browning Dealer Partner. (see website for more details).

The specifications will be examined jointly with the Custom Shop in Belgium, and a price and a delivery date will be fixed.

Once the order is sent to the factory, it is considered as final and may not be cancelled.

Options

As each Custom Shop item is an exceptional weapon, we offer you numerous possibilities for customisation and adaptation, according to your wishes.

The principal options offered are the following:

Grip cap

Tear drops

Concealed pad

Metallic pad

Three-piece forearm

B525

The shotgun with the best performance and the greatest reliability.

B5·25

The B525 above all, it is mechanically immaculate and flawless.

From the forged-steel action frame to the wide flat bolt passing through the massive hinge pin or the chromed bore of the barrels, everything on this shotgun is ultra-resistant, incredibly reliable and made to offer you the same performance, season after season.

The semi-handmade manufacture of this weapon explains its impeccable quality. Handmade construction rules for this shotgun, which is assembled a first time (known as a dummy run), before being polished, engraved, oiled, and then finally reassembled.

During each of these assemblies, the contact surfaces are checked with red ochre for the metal, while the wooden parts are filed to an exact fit.

It is this attention to detail, this quest for perfection and our respect for the traditions of the gunsmith, that gives the B525 its justified reputation for longevity.

The B525, the fifth generation of Over and Under Browning hunting guns built on the basis of the famous B25, has all the history and tradition of Browning concentrated in one gun.

HERITAGE HUNTER 12M

HERITAGE HUNTER 12M

Here is the top of the range in Browning over and under shotguns. The Heritage model is the heir to the B25 side-plated model, and possesses all its elegance. The hunting scene engraving combining partridge and pheasant is remarkably delicate. The stock is made from top quality, carefully oil-rubbed walnut. With its half-pistol stock and its tulip fore-end, the gun pays real tribute to the B25, and is the worthiest of heirs.

B525 LIGHT

Over and Under Shotguns

B525 HUNTER Light

B525 HUNTER Light Classic 12M

The B525 Light Classic constitutes the ultimate synthesis of effectiveness, weight, and styling. An action frame made of a lightweight "Aircraft" grade alloy reinforced with high-strength steel inserts, a light Back Bored barrel profile, and finally a choice of wood and appropriate shaping give this shotgun perfect weight, balance, and feel in the hands.

B525 HUNTER Light Elite 12M

The B525 Light line is completed with this Elite model, offering richer and more engraving with gold plating.

The buttstock and forearm are made of grade 3 walnut and then finished with oil.

B525 HUNTER Light Classic 20M

Only 2.7 kg! The B525 Classic Light 20 or 28 gauge is the lightest of the Browning hunting Over and Under hunting guns.

The action frame of light alloy with a steel insert on the side and a careful choice of wood (which is finished with oil) have allowed us to reach such a light weight.

B525 HUNTER Light Classic 28

The B525 Classic Light 28 gauge gives the pleasure of small calibres with more life and better handling.

Over and Under Shotguns

B525 HUNTER Steel

B525 HUNTER Steel

The new B525 Hunter combines beauty, lightness, and balance. A completely new engraving of a hunting scene livened with small bouquets decorates this new B525. This exquisite engraving covers and adds value to the main working parts. The weight and balance have been completely reviewed and improved thanks to new, lighter barrels.

B525 HUNTER Elite 12M & 20M

The Hunter Elite is the ideal compromise between elegance and effectiveness. Its new lightweight Back Bored barrel assembly is chambered for magnum and proofed for steel shot. The redesigned barrel profile has allowed a consequent improvement in weight, and the result is a B525 Hunter that is lighter and better balanced.

B525 HUNTER Prestige 12M & 20M

This elegant, refined model has a discreet charm. Its buttstock, made in superb grade 4 oil-finished walnut, has a medallion and sculpted teardrops on each side plate. Its fine engraving, finished entirely by our master engravers, and the very beautiful old silver colour of its action frame make it into an elegant firearm in the best of taste.

B525 HUNTER Classic 20M & 28

Reprising the characteristics of the Classic, this B525 sets itself apart with its new engraving and its English grip, which give it a very delicate line.

The characteristics of the B525 line

THE BENCHMARK

When you buy a Browning B525, you are not just buying the heritage and experience of more than 80 years of excellence; you are also buying a shotgun that represents the 5th generation of the legendary B25. The Browning B525 is a more than worthy descendant of this exceptional shotgun and, much like the B25, the Browning B525 has become the benchmark for the industry since its first appearance in 2003.

The Browning B525 is the benchmark product in the world of Over and Under shotguns, as the most reliable and best performing shotgun in its price range.

Renowned for their exceptional quality of manufacture, each shotgun is hand assembled. We offer a wide range of options to meet all the needs of sporting shooters and hunters.

1 THE MOST RELIABLE AND BEST PERFORMING LINE

One of the many qualities of the Browning B525s is that they are perfectly balanced, which allows excellent performance in clay pigeon shooting and hunting.

The balance of each shotgun is improved still further by its hand-made quality, which makes each gun a one-of-a-kind piece.

The B525 is so well-balanced in your hands that you forget that you are holding a gun, since it becomes an extension of yourself, allowing you to concentrate completely on your target, whether it is game or a clay.

Each B525 uses a patented action frame made of indestructible forged steel, with the oversized hinge pin that is typical of Browning and that guarantees solidity and resistance to wear.

Browning is so sure of this system that the action frame of each

shotgun comes with a 10-year warranty. The hinge pin of the B525 assures particularly precise opening and closing. Without having to push it every time, you can literally feel the mechanism locking inside.

All Browning barrels and chambers are manufactured in chromium-molybdenum steel, which is very resistant to corrosion and easy to maintain after a day of shooting.

High performance steel shot can be used in all B525s fitted with Invector chokes.

The B525 is totally reliable thanks to its system of hammer ejectors.

The B525 is therefore the gun that provides the best regularity of extraction and power of ejection after each shot.

2 HAND-MANUFACTURED FOR STYLE AND GUARANTEED PERFORMANCE

The Browning B525 is not mass produced; instead, each gun is made individually starting from its own unique components.

The gun moves from one gunsmith to the next to be entirely made by hand, thanks to the expertise acquired over many years by each of the gunsmiths.

It takes more than 4 months to make a Browning B525, owing to the attention required for the assembly of each gun.

The Browning B525 is the only shotgun on the market in this price range that offers so many different options and that is hand finished.

The shotgun produced in this way is unique and has a level of quality so that it matches perfectly to its owner and provides him with the reliability and longevity that are Browning's trademarks.

This time-tested manufacturing method is different from all the others on the market since our highly qualified gunsmiths rely solely on their own expertise and knowledge to make your B525.

The result is a shotgun that is absolutely one-of-a-kind and whose parts are not interchangeable with those of other B525s.

It is said that our gunsmiths give each B525 'a little bit of their life', which makes each one unique; all of the elements of the shotgun are fitted with such precision that each B525 performs as you would expect it to time after time.

During every stage of manufacture, extreme care is given to make a shotgun that sets the standard for all shotguns, which includes the finely adjusted trigger pull weight that always meets our specific criteria for optimal performance.

3 HAND FITTED TO CREATE THE BEST THERE IS

Browning's gunsmiths take their time when making a B525.

This is the only shotgun on the market at this price level that is hand fitted during production to such a high performance level, making each shotgun truly unique.

Traditional red ochre is used to check that the fit between the action frame and barrels is perfect.

This method is the best procedure to guarantee a perfect fit between all the parts in wood and metal.

It literally allows the gunsmith to "look into" the gun.

The needed adjustments are made by hand, one by one, to ensure that the Browning B525 sets the standard for all other shotguns.

The attention to detail in the making and fitting of each and every Browning B525 is unique, just like the "Browning feeling" as the locking pins meet when you close your gun.

It makes such a reassuring, perfect sound that it gives you the desire to go out and shoot.

All of the B525 action frames are guaranteed for ten years.

4 A CHOICE OF WOOD GRADES AND BUTTSTOCK OPTIONS

Each buttstock is made using specially selected walnut sourced from renewable forests in Europe and a choice of grades are available from 2, 2.5, 3, 4 and 5.

The grade of walnut used on your Browning B525 depends on the level of finish for the gun that you decide to purchase.

Different choices of grip are available, including a pistol grip, a round pistol grip, an English grip, and the "Short" version; but there is also a choice of different drops in the great diversity of stocks on offer.

Each stock is traditionally chequered providing additional control whilst shooting. The time and care taken over the fitting of the stock to each B525 ensures that each and every gun is perfectly balanced.

Recognising that we are all different, Browning also produces a B525 that is suitable for left-handed shooters, and adjustable triggers with 3 different positions are provided on all Sporting models.

5 SAFETY

Every single B525, as with all Browning shotguns, undergoes extremely stringent quality checks that include manual inspections and measurements, up to actually firing each and every gun to check that the shot patterns meet our exacting accuracy standards.

Additionally, it is supported by using computerised analysis to guarantee proper functioning and extreme reliability in each gun.

So when you are out in the field, you can be assured that the gun you are using will never let you down.

6 BACK-BORED BARRELS

Browning delivers the secret of the pros to you: BACK-BORED barrels

Better impacts, increased shot speed: complementary features to get your targets. A barrel is said to be "back bored" when its interior diameter (diameter of the bore) has been increased beyond the classical specifications:

- Increase in speed and penetration
- Recoil reduction: -6%
- Improvement of patterning

All B525 barrels equipped with Invector or Invector+ chokes have been proofed with high-performance steel pellets.

CYNERGY HUNTER Over and Under Shotguns

CYNERGY HUNTER Light Grade 4 12M

CYNERGY HUNTER Light Grade 4 12M

This stylised version of the Cynergy Hunter has been created at the famous Italian engraving workshop of Giovanelli. Another unique feature of this shotgun is that the wood is made from a single block of grade 5/6 American walnut.

CYNERGY HUNTER Light Grade 3 12M

A buttstock in oil-finished grade-3 walnut and a lightweight "Aircraft" grade action frame reinforced by high-resistance steel inserts are decorated with game scenes: two ducks taking flight on the right and two partridges on the left, together with a nickeled finish, form the Cynergy Hunter's magnificent hunting finery.

CYNERGY HUNTER Grade 3 12M

A buttstock made of grade 3 walnut finished in oil, a steel action frame decorated with animal scenes, two ducks taking flight on the right, two partridges on the left, together with a nickeled finish form the Cynergy Hunter's magnificent hunting finery. But the Cynergy's shape, design, and performance are still the same. The Cynergy Hunter is the best of the latest generation of target shooting guns that are perfectly adapted for hunting.

CYNERGY HUNTER Grade 3 20M

For lovers of small gauges and guns with elegant lines, the Cynergy Hunter 20 with its steel action frame has been made just for you! With its low action frame height, its tulip fore-end and its classic stock, this shotgun is a real 20 magnum gauge in the body of a 28.

MAXUS

Semi automatic Shotguns

MAXUS PREMIUM Grade 3

MAXUS

The most reliable design, construction, and performance!

MAXUS™

The new Maxus from Browning is the most anticipated semi-automatic shotgun in decades.

Several highly innovative technologies combine to make the Maxus deliver up to 18% less recoil, 44% less muzzle jump for more accurate follow-up shots, and a firing system that is 24% faster than the nearest competitor.

A new Back Bored Vector Pro barrel assembly has been developed specially for the Maxus.

Add in other benefits, such as the new Speed Lock Forearm with express locking mechanism and Turnkey Magazine Plug, Browning Maxus is the finest, most reliable semi automatic shotgun ever made.

Semi automatic Shotguns

MAXUS HUNTER Grade 2

MAXUS HUNTER Grade 2

The animal engraving and nicked receiver of the Maxus Hunter give it a very distinct character.

This next generation gun enjoys all the innovations of the Maxus line.

MAXUS Standard

The latest arrival in the Maxus range, the Maxus Standard is a gun with a soberly designed receiver delicately enhanced by grade 2 oil-rubbed walnut elements. Like all the Maxus range, this steel-shot tested gun is supplied with a 5 cm barrel extension.

New**MAXUS** Composite

The all-terrain version of the Maxus is chambered in super magnum. The buttstock and the forearm of this model have a careful ergonomic design, with all the handling surfaces specially developed for Browning.

MAXUS Camo Duck Blind

This model is for waterfowl specialists or for hunts where stealth is vital. It has all the characteristics of the Maxus and is covered with the famous Mossy Oak Duck Blind camouflage pattern.

INFLEX
TECHNOLOGY

LIGHTNING
TRIGGER

SPEED LOAD
PLUS

THE SOFTEST SHOOTING SEMI-AUTOMATIC EVER:

While no recoil reduction system on a shotgun can escape the laws of physics, the Maxus is sure to change your mind about recoil control. The Power Drive Gas System, Inflex technology, Vector Pro Back Bored technology, from Browning are combined to reduce the total recoil force to the shooter by 18% compared to any other semi-automatic shotgun on the market.

1 INFLEX TECHNOLOGY

The recoil pad with Inflex technology is the most effective recoil pad of all semi-automatic shotguns.

Much more than a recoil pad in a recoil-absorbing material, it has been designed with an internal structure that lowers the buttstock and pushes it away from the shooter's face after each discharge, which allows a second shot that is even more comfortable and faster.

2 OPTIMAL DIMENSIONS

Innovation in the Maxus is racing ahead and you can see this in the fitting and handling. The new Maxus has an extended forearm and a pistol grip with a small radius to maximise control.

A light tube magazine in steel reduces weight and thus allows a faster swing while maintaining durability. The drop and the cast can be adjusted by using a set of buttstock spacers.

3 TRIGGER SYSTEM

The new design of the Lightning trigger system is the best ever offered for a semi-automatic shotgun. It is designed to offer a smooth, crisp feel with a minimum of travel.

With a mean firing time of 0.0052 seconds, the Lightning trigger system is 24% faster than the nearest competing semi-automatic, making each pull perfect. It is easy to remove for cleaning.

4 SPEED LOAD PLUS & CUT OFF

Speed Loading has been very popular on Browning autoloaders for decades. Browning's new patented loading system sends the first shell directly to the chamber from the magazine. And now, unloading is just as simple with the new Maxus.

The fast unloading function quickly and easily clears the tube magazine, without any need to individually chamber shells.

The Maxus is equipped with a cut off for the magazine to allow the shooter to unload the chamber easily, and thus change the type of shell without having to chamber a shell from the magazine.

MAXUS™

VECTORPRO™

POWERDRIVE
GAS SYSTEM

SPEED
LOCK
FOREARM

INVECTOR
PLUS+

5 VECTORPRO & BACK-BORED

The new geometry of the extended VectorPro forcing cone together with the back-bored barrel eliminates the deformation of shot, making it possible to improve the shot pattern and reduce recoil sensation.

FLAT RIB

A new flat sighting rib is aligned with the top of the receiver.

6 POWER DRIVE GAS SYSTEM

The new Power Drive Gas System uses larger escape valves to remove gas more quickly with heavy loads.

A brand new patented design for an integrated valve keeps residue outside the mechanism for cleaner functioning.

The piston has a run increased in length by 20% to make it even more reliable with light charges. The system works with charges from 24 to 64g.

7 SPEED LOCK FOREARM

The forearm with is unlocked with the new Speed Lock system. This secure system for setting the forearm makes disassembly of the shotgun for cleaning and storage y and faster.

You can attach or detach a strap with one simple press too.

The patented Turnkey magazine plug system is easily disassembled with a car key.

8 INVECTOR-PLUS™ CHOKE SYSTEM

The Invector Plus interchangeable choke functions jointly with the Vector Pro and the back-bored barrel to offer dense and regular shot patterns.

The longer tapering cone inside an Invector Plus choke produces regular shot patterns with more uniform densities, and therefore fewer scattered pellets.

Semi automatic Shotguns

PHOENIX HUNTER 20M

PHOENIX HUNTER 20M

The Phoenix Hunter 20 gauge keeps all its promises by offering you a semi-automatic shotgun chambered for 20 Magnum gauge that is light, functions perfectly, and has a reasonable price.

PHOENIX Plus 12M

Its receiver, decorated with a magnificent Phoenix, is covered by a special black-coloured coating that provides higher resistance to salty conditions.

PHOENIX Special Canard 12M 3.5"

The Phoenix Special Canard is the semi-automatic shotgun for waterfowl specialists that is accessible to all. It has the technical characteristics of the Phoenix. But thanks to its 3 1/2" chamber, it can fire super magnum 89 mm shells. The receiver of this special model is coated in black for greater stealth, and decorated with a silver duck.

LA GAMME PHOENIX

The Back-Bore barrel, equipped with removable Invector+ chokes, proofed for high performance steel shot, and the exclusive Active Valve System make this gun one to shoot in all conditions.

The Phoenix is one of the best value and quality shotguns available today.

MAXUS Camo Duck Blind

New

MAXUS Camo Duck Blind

The model par excellence for waterfowlers. This shotgun is covered in the famous Mossy Oak® Duck Blind camouflage, which is the most effective camouflage for waterfowl.

It is chambered in super magnum to allow you to shoot Steel shot shells of 70 mm to 89 mm.

MAXUS Composite

Designed for the most extreme hunts, the Maxus Composite is a real tool that meets all challenges.

For the buttstock and forearm of this shotgun, we have developed a special anti-slip surface to ensure you a good grip on your gun in all weather conditions.

MAXUS Standard Super Magnum

This new Maxus has been designed for waterfowl specialists. It is equipped with a super magnum chamber for shooting at very long distances. Like all the Maxus, it is steel shot tested and has a countersunk receiver for fitting a hide scope.

BAR ZENITH

Semi-automatic Rifles

BAR ZENITH Ultimate

BAR

The best-selling semi-automatic rifle in the world.

BAR ZENITH

Does the BAR, whose full name is the Browning Automatic Rifle, need to be introduced again?

The BAR created a new class of guns, semi-automatic rifles for big game hunting.

Since its creation in 1966 by one Bruce Browning, grandson of John Moses Browning, showing that good genes live on, the success of the BAR has never been denied.

With more than one million units sold in 44 years, the BAR is the

undisputed leader, the benchmark for semi-automatic rifles.

This title is the result of the quality of its mechanism, to the smoothness of its functioning of its gas system that reduces recoil sensation to a minimum, to its reliability, and above all to the fact that it is constantly evolving to offer continually better performances.

Over the seasons, the BAR has once again been improved. It benefits from mechanical and

aesthetic modifications to remain the best rifle in its class.

Today there are twelve models, offered in twelve different calibres.

Whether you choose a Zenith, a ShortTrac, a LongTrac, or a classic BAR with a receiver made of steel or a lightweight alloy, you will benefit from four decades of know-how, shooting, and excellence.

BAVARIAN STOCK

MONTE CARLO STOCK

CLASSIC CHEEK STOCK

The top-of-the-line
version of the famous
BAR available in 3 base
models.

-3 models of buttstock,
-3 wood qualities, and
-3 types of plates.

BAR ZENITH

Semi-automatic Rifles

BAR ZENITH Prestige Wood

BAR ZENITH Prestige Wood

The Prestige version comprises two models: Wood and Big Game, both fitted with a Bavarian buttstock and a tulip forearm made from Grade 3 walnut.

The BAR Zenith Wood is distinguished by wooden plates integrated into both sides of the receiver, while the BAR Zenith Big Game possesses engraved plates.

BAR ZENITH Ultimate

This is the supreme model of the Zenith family, endowed with magnificent engraving entirely retouched by hand and enhanced with gold inlays showing wild boar on the left side and stags fighting on the other.

A series of options is available for personalising your gun according to your wishes.

BAR ZENITH Prestige Big Game

The BAR Zenith Big Game possesses engraved plates.

Every BAR Zenith can also be customised to suit your preferences thanks to the numerous options on offer.

BAR ZENITH Prestige Affût **New**

The new Bar Zenith Prestige Affût can be singled out for its long piped barrel that offers a longer and therefore more accurate line of sight. It is perfectly suited to different big-game hunting techniques.

The top of the line semi-automatic rifle, the BAR Zenith is the very latest development of the very famous BAR rifle. The master values of this Zenith family are style, refinement, and elegance, as well as the pleasure of using a custom gun.

Indeed, the major asset of the BAR Zenith is that it gives you the possibility of customising your gun thanks to an array of available options with different plates integrated into the receiver, but above all, several types of buttstocks and forearms.

BAR SHORT/ LONGTRAC

Semi-automatic Rifles

BAR SHORT/ LONGTRAC Eclipse Gold

BAR SHORT/ LONGTRAC Eclipse Gold

Refinement and elegance are the two characteristics of this new BAR Eclipse Gold. It has a nicked receiver with two brushed side faces that show off a new engraving of a hunting scene accented by a touch of gold.

BAR SHORT/ LONGTRAC Luxe

The refined BAR Luxe plays the elegance card with its ultra-realistic hand-finished animal engraving. For this high-end model, the most beautiful walnut has been selected to produce this superb stock with its slight hogback, Bavarian cheek piece, and tulip forearm. The BAR Luxe is delivered in an Opaline case specially designed for it.

BAR SHORT/ LONGTRAC Eclipse Gold Left Handed

This is a carbon copy of the new Eclipse Gold, retaining all of its features, but adapted to left-handed shooters. Thus, the ejection window and safety are reversed to create the only semi-automatic rifle in a complete left-handed version.

Semi-automatic Rifles

BAR SHORT/ LONGTRAC Hunter

BAR SHORT/ LONGTRAC Hunter

It's the standard bearer for the ShortTrac - LongTrac line. It is elegant, beautiful, and more ergonomic. Its receiver carries a restrained and refined engraving, enhanced by a golden Buck Mark on an old-silver nickel plating.

BAR SHORT/ LONGTRAC Hunter Nero

This more traditional version of the Bar Hunter has a black finished receiver with a sober engraving, enhanced by a gold "Buck mark"

New

BAR SHORT/ LONGTRAC Camo Infinity

Entirely covered in Mossy Oak® Break Up™ camouflage, this camo version perfectly blends in with vegetation and is the ideal partner for your camouflage clothing.

New

BAR SHORT/ LONGTRAC Composite

With its receiver and forearm made of composite materials gives this gun extreme ruggedness under all conditions. Likewise, it gives the shooters superior and comfortable handling and grip.

Semi-automatic Rifles

BROWNING MAKES THE DIFFERENCE.

An undisputed leader with 44 years experience, Browning is the specialist in semi-automatic rifles.

In 1966 Browning launched the BAR (Browning Automatic Rifle) and it quickly became THE market benchmark. Despite stiff competition, the BAR became the unquestionable leader in Europe for semi-automatic rifles.

To date, more than one million BARs have been sold.

In 2002, Browning, in collaboration with Winchester, developed the WSM (Winchester Short Magnum) calibres that bring together the power and accuracy of the classic magnum calibres and place them in a smaller cartridge.

In 2003, Browning introduced the ShortTrac, which is the first semi-automatic rifle on the market specifically developed for WSM calibres.

The smaller size of the cartridge allowed the creation of a light, compact gun with the guarantee of "Magnum" performance.

All of the experience acquired by our research and development services on the BAR over the last 44 years is found integrated into the ShortTrac for your great satisfaction.

1 THE MOST RELIABLE RIFLE ON THE MARKET; 44 YEARS OF EXPERIENCE

The Barrel chamber is chrome plated to avoid the formation of rust with usage, but especially to facilitate the extraction of used cartridges and thus ensure perfect operation, cartridge after cartridge.

The gas cylinder is also chromed to avoid rust, but above all to allow piston movement in spite of the combustion gas.

The exclusive Browning gas-operated system is adjustable, thereby enabling you to adapt the gun to the types of ammunition used. This operation must be performed by your Browning gunsmith.

An ingenious breech-damping system, located in the housing, considerably reduces wear and stress on the internal mechanical parts.

2 EXCELLENT ACCURACY

The barrel of each BAR rifle is created by cold hammering at the Fabrique Nationale in Herstal, Belgium.

The barrel/bolt locking mechanism works directly in the barrel, due to a lock of seven lugs that engage in an extremely rigid manner.

This system provides excellent shooting accuracy, as well as the possibility of firing magnum cartridges.

The barrel is "breeched" into the receiver, which guarantees great rigidity in the barrel-frame assembly. This is the essential element for great accuracy.

3 VERY HIGH QUALITY FINISH AND ASSEMBLY

During its assembly, each BAR rifle is subjected to extreme care so that each component is perfectly fitted, and assures you unfailing reliability and pleasure of use.

4 EXCLUSIVE BROWNING BOSS™

(Ballistic Optimizing Shooting System): improvement of accuracy.

The BOSS™ system has two main advantages: it improves the accuracy of the rifle and considerably reduces its recoil.

Improvement of accuracy: the BOSS™ system allows the bullet to leave the barrel at the ideal moment, i.e., at the "peak" or "valley" of the vibration wave when the muzzle is virtually motionless. Ten positions are indicated on each Barrel equipped with BOSS™, and a table of average settings is supplied for each calibre, which permits rapid adjustment of the rifle to the desired ammunition.

Recoil reduction: air vents located all around the circumference of the BOSS™ system serve as a muzzle brake by diverting the combustion gas. The result is a recoil reduction of around 30-50% depending on the calibre and, therefore, excellent shooting comfort.

5 REVERSIBLE SAFETY FOR LEFT-HANDED SHOOTERS

Every BAR ShortTrac, LongTrac, or Zenith rifle has a reversible safety located behind the trigger shoe that can be adapted for left-handed shooters. This operation must be performed by a gunsmith.

Adjustable buttstock: the BAR ShortTrac and LongTrac, as well as the BAR Zenith, are fitted with 5 inserts that allow you to adapt the drops and cast of the buttstock to your body.

6 ADJUSTABLE BUTTSTOCK LENGTH

Certain BAR ShortTracs and LongTracs are equipped with an interchangeable pad that enables you to adjust the length of your gun to suit your body.

There are three pads of different thicknesses (1.3 cm / 2.0 cm / 2.5 cm). The original firearm is delivered with the intermediate 2.0 cm thick pad.

7 INNOVATIVE DESIGN

The ergonomic magazine cut-off allows effortless access to the hinged magazine (90°), thus allowing for easier loading and unloading of cartridges.

Silent loading: the red dot seen on the receiver behind the arming lever acts as a locking indicator for increased reliability. Thus you can load your gun in silence, in all certainty that it is locked properly.

DROP-DOWN MAGAZINE KIT

For countries where permitted by law, a removable drop-down magazine with a 6-shot capacity is available as an accessory only in the 30-06 calibre.

8 ADAPABILITY OF BUTTSTOCKS

Completely interchangeable, different types of buttstocks and forearms are available as separate parts and can be installed on your ShortTrac/LongTrac.

CCS 525

Double Express Rifles

CCS 525 Elite

CCS 525 Elite

The CCS 525 Elite presents a rich, deep, hand retouched engraving on a steel action frame. The Grade 3 walnut buttstock has also been reworked to give it a more traditional and finer design. Aesthetics and handling join with the technical qualities of this double express rifle to make an ideal battue gun.

CCS 525

The weight and balance of this gun is perfect for today's hunting conditions.

The action frame of "Aircraft" quality light alloy is strengthened by high-strength steel inserts.

Each detail of this rifle is the result of very specific attention:

- a hogsback buttstock with Bavarian cheek piece,
- a tulip forearm accents its elegance,
- a classic battue rib allowing for the installation of a sighting scope,
- an engraving of animal subjects enhances this rifle.

BROWNING REINVENTS THE DOUBLE EXPRESS RIFLE

The barrel assembly, the essential part of this gun, is both classical and innovative. A spacer ring placed on the upper barrel ensures the precision of the vertical convergence of the barrels, while the lateral convergence is ensured by the design of the barrel itself, which incorporates a unique "cradle" strip.

When the choice of ammunition has been made, a spacer ring is recommended and placed securely under the front sight of the upper barrel, thus guaranteeing unequalled accuracy (*).

(*) This operation must be performed by your gunsmith

CCS 525

SYSTEM OF ADJUSTMENT RINGS

The exclusive barrel convergence adjustment system: cannot be altered but can be adapted to different types of ammunition.

Thanks to this system, the Double Express CCS525 rifles are originally set to 60m by the Liège Test Bench and the two impacts must be within a 5cm square.

FUNCTIONING OF THE SYSTEM

Whatever the diameter of the adjustment ring installed in the muzzle of the gun, the barrel convergence angle maintains a natural pressure and, thus, permanent contact between the muzzle of the upper barrel and the barrel spacer wedge.

As this wedge is itself silver-brazed on the lower barrel, the position of the muzzle of the upper barrel is perfectly maintained on the axis of the muzzle of the lower barrel.

The ammunition used is Winchester Partition 12.96g and 18.53g for the 8 x 57 JRS and 9.3 x 74 R calibres, respectively.

For the 30R Blaser, Blaser CDP 10.7g ammunition is used. If you would like to use a different ammunition, you must adapt your gun using one of the 6 adjustment rings delivered with your rifle.

X-BOLT - BLR

Bolt-action Rifles - Lever-action Rifles

X-BOLT Hunter with sighting system

X-BOLT HUNTER with sighting system

This version is characterised by the battue rib type sighting system and optic fibre front sight allowing for rapid firing without a scope at short distances. This is ideal for driven hunts and is very versatile in use. Moreover, a "hide" type rear sight is delivered with your gun. The very modern designed and perfectly ergonomic forearm of the X-Bolt is made of walnut. Available in a left-handed version.

BLR Lightweight

Here is the classic version of the BLR. This lever-action gun is at home everywhere. On rifle ranges, in the hide, or when tracking where its lever action plays a reassuring role as you cross difficult terrain with the gun slung or on your shoulder.

BLR Lightweight Battue

The BLR is the only lever-action rifle developed in magnum calibre. Its mechanics are impeccable and characterised by the exceptional smoothness of its operation. It has a removable magazine and a highquality barrel and is ready for fitting a scope. Its battue rib along with a short barrel makes an excellent weapon for driven hunts and tracking.

BLR Lightweight Take Down

The BLR now exists in a Take Down version, i.e., it can be dismantled, for example, to facilitate its transport on hunting trips.

No tools are required for dismantling, which is a quick and easy operation that never affects the accuracy of your gun.

X-BOLT

Bolt-action Rifles

X-BOLT Hunter with sighting system

X-BOLT HUNTER with sighting system

This Hunter version is characterised by a sighting system of a battue rib and a fibre optic front sight; a rear sight is also supplied. Once mounted to replace the battue rib, this rear sight offers you superior accuracy and quality of sight for long distance shooting.

X-BOLT HUNTER without sighting system

This version is available without sights and the barrel is not prepared for their mounting. Available in a left-handed version.

X-BOLT Stainless Stalker

Offering great resistance and ideal in all weather conditions, the X-Bolt Stainless Stalker has a stainless steel barrel and breech block as well as a composite buttstock with Dura-Touch® coating. This weapon is the partner of choice for your extreme hunts. Available with fluted and threaded barrel.

X-BOLT Composite

Designed for the most difficult conditions of use, the X-Bolt Composite has a buttstock made of high-resistance composite materials and coated with Dura-Touch® for improved handling. The barrel, the breech block, and the other metal parts are anti-reflective matt blued.

X-BOLT

Bolt-action Rifles

The new Browning appeared like a revolution in the bolt-action rifle universe.

The X-Bolt was built on the foundations of the success of previous Browning rifles, carrying numerous innovations that will without doubt make it one of the best rifles on the market.

The most remarkable innovation is the adjustable three-lever Feather Trigger™ system that gives this rifle a firing sensation of unequalled quality.

A new bolt unlock button allows the bolt to be opened with the safety on for unloading.

Its new design features a more compact size and better balance, making it very functional.

Finally, to ensure the stability of the sighting, scope bases are now attached to the receiver using four screws per base.

Innovation is a tradition at Browning, and the X-Bolt is one of the latest examples.

1 FEATHER TRIGGER

To get an accurate shot overland, on the hunt, or at a shooting range it is essential to have a good trigger.

The new adjustable three-lever Feather Trigger™ system of the X-Bolt allows a rapid and clean action from the trigger show, with perfect accuracy and no overtravel.

The trigger is also adjustable from 1.6 to 2.3 kilograms with an adjustment screw, and is pre-set at 1.7 kilograms at the factory.

The alloy trigger housing contains chrome-plated steel components that are perfectly polished on all important contact surfaces, ensuring perfect functioning of the entire unit.

Precise engagement angles mean that the Feather Trigger™ remains light and perfectly adjusted, even after firing thousands of cartridges.

2 AN EXTREMELY ACCURATE BARREL

A free-floating barrel is essential for utmost accuracy.

The X-Bolt's free-floating barrel is perfect due to double bedding i.e. positioning of the barrel/breech block assembly at two points with respect to the forearm, at the front and at the rear.

Another important point is that the perfectly designed target crown is slightly recessed, which provides protection of the ends of the barrel rifling from possible damage. The barrels are systematically inspected at 3 points to verify their interior finish their straightness. They are passed under a pneumatic micrometer to check their uniformity.

3 OPENING THE BOLT

The bolt-unlocking button works in conjunction with the safety to provide an added degree of safety. Conveniently located on top of the bolt lever, the bolt-unlocking button allows you to open the bolt while the safety is on. You can thus check the chamber or unload your X-Bolt in perfect safety.

Finally, for additional security, the safety blocks not only the trigger shoe and the firing pin, but the trigger sear as well.

The short 60° bolt lift allows you to work and open the bolt quickly without the scope impeding on the trajectory.

4 INFLEX ANTI-RECOIL PAD

A completely new Inflex Technology anti-recoil pad is standard on every X-Bolt rifle.

This extra-soft pad offers the best recoil absorption possible on a rifle.

The exclusive design and material used promote a downward deviation of the direction of the recoil forces, thus pulling the buttstock slightly away from your face in order to reduce the recoil and upward motion of the gun.

5 EXCLUSIVE DROP-DOWN MAGAZINE

An all-new detachable rotary magazine is perfectly integrated into the X-Bolt design.

Made of light and extremely durable polymer, this drop-down magazine is designed so that each cartridge is directly in-line with the bolt and the chamber is precisely on the axis.

The cartridges are therefore chambered faster and easier without damaging the tips, as is the case with traditional magazines. An ergonomic release placed directly on the magazine allows it to drop directly downward and into your hand.

6 X-LOCK™ SCOPE MOUNTING SYSTEM

Securely mounted optics are essential to achieve outstanding accuracy.

To ensure that the new X-Bolt has the most stable scope mount possible, the X-Lock system introduces a new design with four screws per base, replacing the traditional two-screw system. The benefits are obvious: the bases are secured at all four corners rather than being held only in the centre, resulting in a more precise and stable positioning of the mounting and scope on the receiver.

A-BOLT EUROBOLT

Bolt-action Rifles

EUROBOLT

EUROBOLT

The Eurobolt is provided with interchangeable sights. Thus, the gun can be modified to excel on a high seat hunt (with a rear leaf sight) or to make it formidable on a drivengame hunt (with a quarter rib). The trigger has a "stecher" (set trigger) mechanism, which allows the gun to be fired with a very light trigger pull for very accurate shots.

The Bavarian hogsback stock is always perfect for aiming with open sights or a scope. It comes with two sights: rear sight + battue rib, to be mounted according to choice.

A-BOLT Composite Stalker

Endowed with the features unique to the A-Bolt line, this Stalker version is extremely robust in the worst conditions as a result of its composite buttstock. In addition, it will meet your every expectation, whether for hunting or sharpshooting.

A-BOLT UK Stalker

This A-Bolt Composite rifle is offered in a highly specific configuration, its slightly shortened barrel is threaded (M14x1) at the end. The model is also supplied with a steel fixing base and an extra magazine.

Lumens 15

All of our torches are made with high-quality components and are assembled with the greatest care.

Starting in 2010, Browning, as well as numerous other manufacturers, will follow an identical performance standard, ANSI-FL1.

The luminosity of our torches measured in lumens is thus directly comparable with other manufacturers.

For a century, hunters have trusted completely Legia cartridges, which have been faithful companions when out hunting.

The current range has integrated the latest technical developments while still respecting the heritage of this line of legendary shells, which are sought out by hunters for whom every shot fired must be a “master shot”.

LÉGIA HUNTING

LÉGIA FIELD

LÉGIA HIGH SPEED

LÉGIA BRENNKE

The Legia Hunting in its Burgundy box with a 67 mm case and 32g load hardened lead shot is the ideal shell for upland hunting and for small game hunting with all types of shotguns.

Available in no. 6, 7 and 8 shot, you will appreciate the smoothness and regularity of the shot patterns for hunting doves, pigeons, or pheasants.

Code	CBLC132P
Gauge	12
Tube	67
Head	16
Load	32
Shot	6 7
Speed in m/s	395

With its 22 mm head and 34g of hardened shot in a 70 mm case, the Legia Field is the “all terrain” cartridge for driven partridge or pheasant.

It will also be your ideal partner for hunting hares.

Code	CBFI34P
Gauge	12
Tube	70
Head	22
Load	34
Shot	5 6 7
Speed in m/s	400

The Legia High Speed is the specialist cartridge for long-distance shooting of fast game with dense plumage, such as pigeons.

In fact, its high speed and heavy load of 36g with perfectly adapted shot (4-5-6) make it a powerful and effective shell.

Its red case with a 22 mm head that ensures excellent holding in the chamber are the distinctive signs of this “high performance” shell.

HERITAGE

Over-and-Under Shotguns

HERITAGE SPORTER 12M

B525

The highest-performing and most reliable shotgun.

B5·25

The B525 is the latest evolution of a legendary gun created by the brilliant and innovative mind of John Moses Browning in 1925: the B25, the "last word" in Over-and-Under shotguns.

This is the foundation on which the B325, B425, and, as of 2003, the B525, were created and produced.

One million copies of these three guns have been produced, a true record.

This figure attests not only to the

success of the gun but, above all, to the confidence placed in Browning over-and-under guns, especially the B525, by hunters and sport shooters all over the world.

In less than seven years of existence, the B525 has become a true benchmark, the perfect embodiment of Browning's quality, know-how, and tradition.

Its reliability, ruggedness, and manageability are legendary, due to the impeccable and much-envied quality of its design.

Each gun is created with special care by our skilled gunsmiths in our Miroku plant, Japan. For over thirty years, Miroku has been considered one of the highest-performing production plants in the world.

It is a place where attention to detail and rigorous production processes are the rule, almost a way of life.

Every B525 is manufactured and assembled traditionally, using red ochre to check exact fit, the bearing surfaces of the bolt and

action frame are hand-filed and everything is checked multiple times so that neither time nor the thousands of cartridges to be fired will have the slightest effect on the gun.

At this price we are able to provide 10-year warranties for the Browning 525 action frames and guarantee that each gun is both identical to the others and at the same time unique.

HERITAGE SPORTER 12M

The Heritage Sporter combines the performance of a modern shotgun with the elegance of a true deluxe gun. It embodies the line of the hunting model with its magnificent side plates, but with the specifications of the Sporter versions. The pistol buttstock and tulip forearm are made from beautiful, oil-finished walnut. Each gun is beautifully engraved.

Gauge	12M

B5·25

B525 SPORTER

Over-and-Under Shotguns

B525 SPORTER Prestige 20M

B525 SPORTER Prestige 12M & 20M

Elegant and refined, the B525 Sporter Prestige is fitted with grade 4 oil-finished walnut, "water droplets" on each side plate, and a chequered binding. The buttstock is also equipped with a metal plate on which you can have your initials engraved. This fine inscription, performed entirely by our master engravers, covers nearly the entirety of the pieces.

B525 SPORTER Elite 12M

Lovely grade 3 oil-finished walnut combined with a beautiful hand-retouched engraving of a hunting scene make the B525 Sporter Elite an elegant sporting gun of high performance.

B525 SPORTER 12M & 20M

The B525 Sporter is the base version of the 525 series. A grade 1 pistol buttstock and 5 Invector chokes make this an ideal sporting gun.

B525 SPORTER Premium Gold 12M

The Premium Gold enjoys the same specifications as the Sporter, which include grade 2.5 wood and 5 Briley chokes. However, it asserts its own identity with its black action frame decorated with golden birds.

ULTRA XS

Over-and-Under Shotguns

ULTRA XS Prestige 12M

ULTRA XS

Technology-derived, shooting excellence.

ULTRA XS

Investor Plus Titanium chokes are produced exclusively for Browning by Briley.

Made 100% from titanium, they are highly durable and extremely lightweight, thus improving swing and balance.

The tulip forearm and the stock with adjustable comb are made from a block of grade 4 oil-finished walnut.

The modern and elegant engraving is gold inlaid.

Each Ultra XS has a fully adjustable comb on the top of the stock allowing the shooter to fit the gun precisely to their face and shoulder for even more accurate shooting.

Sam Green

National Competition Sporting - Gold medal Junior British Open

ULTRA XS Prestige 12M

The Ultra XS Prestige is the specialist in Sporting Clays.

Equipped with a Back Bored barrel assembly, the top rib is mounted on a rounded base in order to allow for the free expansion of the barrels when their temperature is increased.

The benefit is that performance levels and the barrels' point of impact are both maintained and there is no decrease in shot patterns.

Gauge	12M
Chamber	76 mm
Length	71 - 76 - 81 cm
Chokes	5 Inv+ Titanium (Cyl - 1/4 - 1/2 - 3/4 - Full)
Top rib	ventilated 13 - 10 mm

ULTRA XS

ULTRA XS

Over-and-Under Shotguns

ULTRA XS Prestige 20M

ULTRA XS Prestige 20M

This version of the Ultra XS 20M is fitted with superb oil finished walnut, a new engraving with gold inlay and exclusive 100% titanium chokes.

ULTRA XS 20M

Fine and distinguished, this 20M calibre Ultra XS is extraordinarily effective.

Its quick and precise swing, combined with Back Bored barrels equipped with Midas chokes, offers exceptional performance.

ULTRA XS 12

Sporting clays, a gruelling and technique-oriented discipline, can take on very different forms. Parcours in open fields, in undergrowth, and the majority approaching and retreating clay.

The Ultra XS allows you to modify the necessary parameters in a few seconds.

The XS Sporter version is equipped with external Midas chokes.

TITANIUM CHOKES

Titanium chokes are made with 100% titanium exclusively for Browning by Briley.

REMOVABLE MIDAS CHOKES

These chokes can be detached and reattached without a key. Their ballistic performance is unparalleled. Developed in conjunction with the Briley company.

All Browning Hunter & Sporter over-and-under shotguns come with 5 chokes.

ULTRA XTR - XSH

Over-and-Under Shotguns

ULTRA XTR Prestige 12

ULTRA XTR Prestige 12

As its name would indicate, this Prestige version of the XTR shotgun sets itself apart with the superior quality of its wood and its 5 100% Titanium Invector Plus.

Its completely reworked engraving features silver inlay.

ULTRA XTR 12

This model is fitted with a rubber comb that is simultaneously both smooth to the touch and non-slip. This gun strives for accuracy in aiming that can be guaranteed to the millimetre with a comfort that, until now, had never been attained.

It is primarily geared toward shooters who practice their sport intensely.

ULTRA XSH 12

Oriented toward pit shooters seeking good interdisciplinary versatility (pit, double trap, etc.) and Helice (ZZ), this ultra XSH is equipped with removable Midas chokes and 74 and 76cm barrels.

TITANIUM CHOKES

Titanium chokes are made with 100% titanium exclusively for Browning by Briley.

REMOVABLE MIDAS CHOKES

These chokes can be detached and reattached without a key. Their ballistic performance is unparalleled. Developed in conjunction with the Briley company.

All Browning Hunter & Sporter over-and-under shotguns come with 5 chokes.

GTS

Over-and-Under Shotguns

GTS Elite 12M

GTS Elite 12M

With its superb engraving, this version of the GTS exudes both distinction and elegance. The engraving, which features the distinctive GTS design – a duck that gradually transforms into a clay target, is enhanced by a lovely arabesque motif and superb oil-finished European walnut.

GTS Special 12M

The ideal model for hunting and Sporting.

Its Back-Bored barrel, 10mm rib, and ability to fire any cartridge (including Steel shot) make for a formidably effective gun without sacrificing comfort, ideal for hunting waterfowl and migratory birds.

CYNERGY SPORT

Over-and-Under Shotguns

CYNERGY Pro Sport 12M

CYNERGY Pro Sport 12M

Specially designed for Sporting clays, the Cynergy Sporter stands out for its exclusive Diamond Titanium exterior chokes, which offer unparalleled ballistic quality.

Its appearance and revolutionary design are undoubtedly a novel contribution to the world of shooting.

CYNERGY Pro Sport 20M

The Cynergy boasts a unique design that's both modern and incredibly appealing.

With its streamlined proportions, this shotgun is a true 20M magnum in the body of a 28M.

CYNERGY Pro Sport Adjustable 12M

Having the same characteristics as the Pro Sport, this shotgun is equipped with an adjustable buttstock that allows you to adapt it to your body and habits.

THE CYNERGY LINE

Turn your shotgun into a natural extension of your body. Imagine an Over-and-Under that is so innovative and effective that you forget that you're even using it as you only focus on concentrating on your target. By setting these two objectives as a starting point for our project, the Cynergy was born. This shotgun, unique in its class, has come to revolutionise the very idea of an Over-and-Under shotgun, a concept created by Browning in 1925.

The Cynergy is the best shotgun of its generation and is certainly the greatest innovation in firearms since the birth of the B25 over 80 years ago. The Cynergy has 25% less recoil thanks to a special Inflex pad that guarantees you a previously unseen shooting comfort and also allows you to have a gun that fits you perfectly, thanks to three different pads of varying thickness and the included spacer.

The Cynergy is also the fastest shot on the market, 0.0019 seconds.

CYNERGY Pro Sport Adjustable 12M

CYNERGY Pro Sport 20M

The Cynergy has the lowest action frame (60 mm), thanks to an exclusive new ultra-resistant hinge covered by a 10-year warranty.

The Cynergy also has three trigger options that can be adjusted to 3 different positions.

As with any Browning shotgun, the Cynergy has an extremely effective Back-Bored barrel capable of firing high-performance Steel shot and is also fitted with Invector "Diamond" Titanium chokes.

CYNERGY Composite Black Ice 12M

CYNERGY Composite Black Ice 12M

Its futuristic style will turn heads on the shooting range. The buttstock and forearm are made of composite material with rubber inserts, increasing this gun's weight and making it more resistant.

A supplementary adjustable comb that is included with the gun allows the buttstock drop and cast to be modified as you desire.

CYNERGY Sporter Inflex 12M

Specially designed for Sporting Clays, the Cynergy Sporter stands out for its exclusive Diamond Titanium exterior chokes, which offer unparalleled ballistic quality. Its appearance and revolutionary design are undoubtedly a novel contribution to the world of shooting. It comes equipped with an Inflex pad.

CYNERGY Pro Trap Adjustable 12M

With the adjustable drop and cost comb, you'll be able to quickly adjust the comb to your measurements. The top rib, which is mounted on a rounded base, allows the barrels to expand without constraints during intense shooting. This allows for consistent performance in terms of accuracy and points of impact.

CYNERGY Pro Trap Adjustable 12 Midas

This model identical to the Cynergy Pro Trap Adjustable is fitted with 5 Invector plus Midas chokes that offer optimal versatility of use in all trap-shooting disciplines.

Sights

Hi-Viz® SIGHTS 4-IN-1 GAME

- The Hi-Viz 4-in-1 Game sight includes front and rear sights, which makes it perfect for deer, turkey, waterfowl, and upland hunting
- Injection-moulded optical-grade resin sight concept
- Rear sight is completely adjustable for windage and elevation
- Light-gathering Litepipes allow for shooting in poor light conditions

Code 12893
Colours 4-in-1 game sight
Sizes

Hi-Viz® MAGNI-SPORT SIGHTS

- Magni-Sport consists of 5 screws, sizes 3/56, 3 X .5, 3 X .6, 5/40 and 6/48 that are suitable for most shotguns
- Hiviz® Magni-Sport sights, which use a patented technology, solve the problem of cross-eye dominance by making the sight visible solely with the shooting eye, which allows any shooter to shoot with the two eyes opened for enhanced visualisation of the target and improved hand-eye coordination
- Includes one green and one red LitePipe
- Magni-sport sights include two sizes with magnetic bases in order to adapt to the rib of most shotguns and two green LitePipes as well as two red LitePipes

Code 12854
Colours 1 green, 1 red

Code 12870
Colours magni sport
magnetic sight

Hi-Viz® BIRD BUSTER MAGNETIC SIGHTS

- All Hi-Viz® Bird Buster Browning Magnetic sights are delivered with four interchangeable optical fibres of different diameters for variable brightness conditions
- Three different sizes of magnetic bases to adapt to the front sight of all shotguns
- They adapt to all Browning shotguns

Code 12859
Colours 4 Litepipe

Hi-Viz® COMP SIGHTS

- The metallic base adapts directly to the front sight of the shotguns for a more effective sight line.
- Interchangeable light conductors allow the shooter to adapt the diameter of the optical fibre and the colour to the shooting conditions
- Comprises eight light conductors of different colours and diameters
- Allows the shooter to know exactly where the barrel is placed in relation to the target
- Key and transport case included
- 5 screws, sizes 3/56, 3 X .5, 3 X .6, 5/40 and 6/48 that are suitable for most shotguns

Code 12850
Colours 1 white, 4 green, 3 red litepipes

A-BOLT - T-BOLT BUCK MARK RIFLE

Rifles

T-BOLT Sporter Composite

T-BOLT Sporter

This rifle is a "vintage", the re-issuance of a best seller, a legend. Available in .22LR, .22 Magnum, and 17 HMR calibres, it is quite close on an aesthetical point of view to its ancestor, the first T-Bolt, but the mechanics have been completely modernised. It is characterised by its straight pull bolt that loads cartridges from an exclusive 10-round rotating magazine.

T-BOLT Sporter Composite

This version is equipped with a buttstock made of highly-resistant ergonomic composite, allowing intense use in all conditions. Another very useful characteristic is an additional magazine integrated in the buttstock and, more particularly, in the pad. During intense shooting, it is therefore very easy to quickly replace the first empty magazine.

BUCK MARK SPORTER RIFLE

Non-standard by its design, compact, and tremendously accurate and reliable, this rifle offers a range of truly extensive usage possibilities. It has adjustable sighting equipment with an adjustable rear sight as well as a fibre optic front sight as well as an integrated rail for optical mounting.

ADDITIONAL MAGAZINE INTEGRATED IN THE BUTTSTOCK FOR THE COMPOSITE VERSION

An additional magazine integrated in the buttstock and, more particularly, in the pad.

During intense shooting, it is therefore very easy to quickly replace the first empty magazine.

BUCK MARK RIFLE

T-BOLT Sporter

SA.22 – BL.22

Rifles

SA .22

A rifle that is often imitated but never equalled, continuously manufactured since 1924.

- Operation in “blow back” mode (unlocked breech activated by gas);
- Automatic eject, arming, and loading;
- Loading performed in the buttstock (the magazine tube is withdrawn from the back of the rifle and the cartridges are inserted one by one in the hole found in the buttstock);
- bottom ejection;
- barrel take-down with wear adjustment.

BL .22 Grade 2

This jewel of the era of the pioneers, back in the Wild West, the .22 BL with its short movement action-lever (33°), external hammer, and magazine tube. It enables you to mix all types of cartridges (long, long rifles, short) with no risks of jamming.

New

[illegible]

To celebrate the 100th birthday of the legendary 1911 pistol, we are pleased and proud to present a new version of this mythical gun, resized to a 22LR calibre.

The Model 1911 pistol was created by John Moses Browning at the beginning of the 1900's to reply to a call for tenders made by the American army for a .45 calibre pistol.

The pistol then became the most widespread and most popular handgun.

This new resized version respects the proportions and functionalities of its ancestor perfectly, whilst offering a more compact gun with an exceptionally low weight, barely 430 grams.

The slide is machined in a single aluminium block, the side grooves make it extremely easy to hold and handle, and fluid and easy to use. It has a black mat finish.

The aluminium receiver also has a mat black finish. The barrel, made from molybdenum chrome steel has a barrel insert machined from a single stainless steel block.

The magazine with a capacity of ten rounds is in heat treated steel to guarantee long service life and reliability of loading.

The manual safety catch is well-dimensioned. Like the original model, the 1911-22 has a pistol grip safety system.

For its first year, every 1911-2022 pistol will be delivered with a certificate of origin and a holster in cotton canvas and leather.

1911-22 LR

.22 Hand Guns

Browning Buck Mark rimfire pistols are very much prized due to their quality, reliability, and accuracy, and numerous models are available.

Operation

The "Blowback" operation principle of the Buck Mark pistols allows for a simpler and more reliable operation.

Slide

The two reinforcements on each side of the slide offer an excellent grip. The slide catch is easily activated by either hand.

Front sight

Plus models are equipped with a Truglo®/Marble's® fibre optic front sight.

Trigger

Great performance compared with competitive products, the discharges of Buck Mark pistols are light, accurate, and clean.

Receiver

Although most of the .22LR pistols on the market are cast or made from sheet-metal stampings, every Buck Mark receiver is CNC-machined (Computer Numerical Control) to extreme tolerances from a block of 7075-T6 aluminium.

Barrel

Many models have heavy barrels for improving stability. Each chamber is hand-reamed and muzzle crowns are recessed to protect the rifling from damage that might reduce accuracy.

Pistol grip

Several varieties of wood, laminated woods, and composite materials are available. The ambidextrous rubber Ultragrip RX™ (URX) and wood Ultragrip Deluxe™ (UDX) offer a perfectly ergonomic hold.

Rear sight

The Pro-Target™ rear sight, adjustable with 16 clicks per revolution, is mounted at the factory on all models. This sight provides a more accurate range of adjustment than the standard 12-click sights.

Magazine

The body of the magazine is heat-treated for long-term loading reliability. Its coil spring provides a much more regular and stable feed than the usual Z spring. Capacity: 10 cartridges.

Drop-down magazine

Located near the trigger guard, the magazine cut-off offers very practical operation.

Safety

The wide manual safety can be set with the thumb. For greater safety, the trigger is disconnected when the magazine is removed.

**Ultragrip RX™ and Ultragrip DX™
represent the latest technology in
pistol grips**

These new ergonomic grips have an ergonomic profile with the contour and texture of the chequering combining to offer you ideal handling.

The hand will automatically take hold of the grip in the same place for every shot, allowing a more instinctive shot and improved accuracy. The textured surfaces are comfortable and effective under all conditions and for all ergonomic variations.
